forensic sciences. The US National Research Council (NRC)<sup>10</sup> and President's Council of Advisors and Science and Technology (PCAST)<sup>11</sup> conceptualize **forensic science** as a transdisciplinary field that involves the generation of scientific knowledge and the application of science to assist matters of law. This definition encompasses forensic psychological assessments because, in general, psychology trades off the norms, values, and esteem of science,<sup>12</sup> and there is strong agreement that practitioners completing forensic psychological assessments should apply scientific methods and knowledge in their work.<sup>13</sup>

14. There are well-documented concerns about many aspects of standard and accepted practices in the forensic sciences.<sup>14</sup> This attention has resulted in detailed consideration of best practices and reforms in forensic science that we draw upon. Although to our knowledge no government or international science institutes have expressed the same concerns about forensic psychological assessments in general, or psychological autopsies and behavioural profiling in particular, the authoritative reports that do exist are readily generalizable to these areas of practice. In fact, forensic psychology practitioners and scholars have also drawn direct parallels between these authoritative sources in forensic science and forensic psychological assessment practices.<sup>15</sup>

(2017).

15. Consequently, we use the framework provided by the NRC and the PCAST to describe and provide a benchmark for best-practice forensic psychological assessments. This framework includes the core components of **validity** identified by PCAST: **foundational validity (accuracy, repeatability and reproducibility)** and **validity as applied (proficiency and field validity)**.<sup>16</sup> We also consider additional issues identified by the NRC<sup>17</sup> and others commenting on best practices in the forensic sciences and forensic psychological assessment, including **bias, quality assurance**, opinion expression, limitations and assumptions, alternative views or disagreements, and ethical obligations and codes of conduct. We consider each of these issues in detail in subsequent sections of this report.

#### *What Is Psychological Assessment?*

16. Since its founding in the 1800s, the field of psychology has focused on indexing people's mental, psychophysical, and psychological abilities using psychometrics, or "the art of imposing measurement and number upon operations of the mind."<sup>18</sup> From these roots, modern psychometric theories evolved into a set of scientific rules for establishing and evaluating the usefulness of psychological measurements. These rules form a widely accepted and standardized approach to assessing psychological

characteristics.<sup>19</sup> Today there are tens of thousands of **psychometric tools** claiming to measure psychological attributes like personality, general intelligence, risk for future violence, and much more.<sup>20</sup> These tools vary in structure and play different roles depending on the clinical approach adopted by a practitioner.

17. Broadly speaking, there are three types of clinical approaches that practitioners (usually psychologists) use to assess the current, prior, or future mental state of a person under examination: 1) **structured actuarial assessments**, 2) **unstructured clinical judgments**, and 3) **structured clinical judgments**.<sup>21</sup> These three approaches are based on distinct rationales, and each has its strengths and weaknesses. Each is fallible and has important limitations that the Commission may wish to consider.
18. Structured actuarial assessments are closely based on information obtained from formalized psychometric tools developed for a particular purpose. These tools can define the scope of inquiry (i.e., what information is sought), the classification and categorization of relevant information (e.g., what is or is not classified as a “previous violent offence”), and the manner of weighing, combining, and interpreting that information (e.g., how is a total “score” calculated, or what a score between “x” and “y”

on this test means).<sup>22</sup> Although these structured actuarial approaches cannot eliminate all subjectivity in a practitioner's assessment, the information used and the manner for combining it are determined based on statistical analysis in much the same way that actuarial tables are used to determine insurance premiums. Studies show that this structured actuarial approach generally leads to more accurate and less biased opinions than unstructured judgments.<sup>23</sup>

19. Unstructured clinical judgments are based entirely on the intuition of the practitioner as guided by their training, study, and/or experience, and do not include psychometric tools as part of the assessment approach. The practitioner considers the facts at hand, their knowledge in the area, and combines these to form their clinical opinion. This process is subjective, adaptable, and often implicit. It relies on an individual practitioners' knowledge, beliefs, and memory, as well as their analytical approach and skill. Although training in psychology will provide guidance regarding what should be considered and how it should be used to address some forensic psychological questions, ultimately unstructured opinion formation is highly variable and is

---

<sup>22</sup> Although there are some psychometric tools that align directly with the types of referral questions psychologists might be asked to address, often there is an inferential gap between what a tool can measure (e.g., intelligence, severity of mood disorder) and what the referral asks for (e.g., whether a person competently waived a legal right, the risk a person poses to public safety). Additionally, practitioners often combine multiple psychometric tools in one assessment that then requires inferential integration. These inferences reduce the strengths of the actuarial approach.

<sup>23</sup> Ægisdóttir, S., White, M.J., Spengler, P.M., Maugherman, A.S., Anderson, L.A., Cook, R.S., Nichols, C.N., Lampropoulos, G.K., Walker, B.S., Cohen, G., & Rush, J.D. (2006). The meta-analysis of clinical judgment project: fifty-six years of accumulated research on clinical versus statistical prediction. *Counseling Psychologist*, 34(3), 341–82. <https://doi.org/10.1177/0011000005285875>; Grove, W.M., Zald, D.H., Lebow, B.S., Snitz, B.E., & Nelson, C. (2000). (2021). Do structured risk assessments predict violent, any, and sexual offending better than unstructured judgment? An umbrella review. *Psychology, Public Policy, and Law*, 27(1), 79–97. <https://doi.org/10.1037/law0000299>.

notoriously difficult to accurately describe.<sup>24</sup> Furthermore, these unstructured approaches do not lend themselves easily to outside evaluation or like-for-like comparisons between or within practitioners.<sup>25</sup> Without this information, it is difficult to estimate the foundational or applied validity of a practitioner’s opinion or technique.<sup>26</sup>

20. Structured clinical judgments are an in-between approach, involving some elements of subjective reasoning like unstructured clinical approaches, but these subjective elements are combined with information derived from more structured decision aids, checklists, and/or psychometric tools. The key to distinguishing a structured actuarial approach from a structured clinical approach is whether the decision aids or psychometric tools used in the assessment have formalized rules for determining what particular values or scores mean. In the actuarial approach, these rules are formalized through mathematical and statistical development. However, a structured clinical approach intentionally resists formal data integration, purposefully requiring clinical judgment and intuition to integrate and interpret the available data.<sup>27</sup> A structured clinical judgment approach is described by proponents as “discretionary in essence” while also “rely[ing] on evidence-based guidelines to systematize the exercise of discretion.”<sup>28</sup> Structured clinical judgments are generally more accurate and objective

than unstructured clinical judgments but are less accurate and objective than structured actuarial methods;<sup>29</sup> however, this is an active area of debate in the scholarly literature.<sup>30</sup>

#### *What Is Forensic Psychological Assessment?*

21. Psychologists began offering assessment services to courts in the early 1900s to help decide cases when there was some question at issue regarding a person's psychological capacities, prior or current functioning, or future behavioural likelihood.<sup>31</sup> Today, forensic psychology has become a full-fledged subfield of psychology in which psychological science and/or practice is applied to the law to help resolve legal, contractual, or administrative matters.<sup>32</sup> Often, legal investigations and cases rest at least partially on a psychological feature or question, and psychologists are asked to provide psychological assessments as a source of evidence.
22. Dozens of different types of psycho-legal questions are referred to psychologists, and the frequency of these assessments vary widely.<sup>33</sup> Referrals come from many sources, including in civil, criminal, juvenile, and family law cases; from institutional legal bodies

Assessment practices and expert judgment methods in forensic psychology and psychiatry: An international snapshot. *Criminal Justice and Behaviour*, 41(12), 1406–21, <https://doi.org/10.1177/0093854814548449>.

that operate outside of typical courtroom structures, such as administrative bodies, regulatory boards, and quasi-legal scenarios like arbitration; and from police and investigative agencies, among others.<sup>34</sup> They also vary with regard to the time period of interest, with some referrals focused on the likelihood of future behaviours and mental states, others asking about current functional deficits, and still others inquiring about previous mental states, motivations, and behaviours.<sup>35</sup> Most forensic psychologists use structured actuarial or structured clinical tools in their assessments, though about 25% rely on unstructured clinical judgments.<sup>36</sup>

23. We note that psychologists are not the only type of practitioner that might offer services like these to the courts. Forensic psychologists and forensic psychiatrists “labor in the same vineyard” and “play the same part in the sociology of the legal process.”<sup>37</sup> They both offer assessment services to the law;<sup>38</sup> however, there are substantive disciplinary differences with relevance to this report and our opinion.
24. Psychiatry is a branch of medicine, the historical purpose of which was to diagnose, treat, and prevent illness. Psychology’s historical purpose, in contrast, was to use scientific principles to understand and describe human development, cognitive and intellectual abilities, and the adaptive and maladaptive elements of personality and social-emotional functioning.<sup>39</sup> These historical underpinnings influence the

<sup>39</sup> Grisso, 1993.

methodology the fields use today: psychiatrists, in the tradition of medicine, tend to use unstandardized interviews and observations in their forensic assessments, while psychologists, in the tradition of psychology, tend to use more standardized and quantitative tests and instruments to measure traits, abilities, and functioning in their forensic assessments.<sup>40</sup>

25. We also note that in Canada, psychiatrists are retained more often than psychologists as experts in pretrial forensic assessments,<sup>41</sup> because the Criminal Code of Canada limits forensic assessments to those with a medical degree.<sup>42</sup> Although the Code allows for these evaluations to be completed by “any other person who has been designated by the Attorney General,”<sup>43</sup> in practice, psychologists are less often involved in Canadian forensic assessments as compared to other countries like the United States.<sup>44</sup>
26. Our Opinion specifies that the best practices we describe in this report should apply when an assessment is offered by a practitioner in a legal context that relies on the norms, esteem, and values of science.<sup>45</sup> However, even when a practitioner does not closely adhere to scientific conventions (such as psychiatrists and law enforcement

officers relying on methods traditional to their disciplines), we argue these best practices are still relevant.<sup>46</sup>

#### *What Are Risk Assessments?*

27. Risk assessments are used in many domains to identify, analyze, and mitigate the effects of potential events in the future that may have a negative impact on people, assets, and/or the environment.<sup>47</sup> From a psychological perspective, risk assessments are frequently used to evaluate, mitigate, or manage the likelihood that a person will engage in a future behaviour of interest.<sup>48</sup> Forensic practitioners are commonly asked to provide risk assessments relating to violence risk, suicide risk, and sexual offending risk as part of civil commitment proceedings,<sup>49</sup> pre-trial risk management decisions,<sup>50</sup>

<sup>46</sup> “Hauling down the science flag and hoisting the non-science flag does not exempt expert evidence from Daubert scrutiny.” Saks, M.J. (2000). Banishing *ipse dixit*: The impact of Kumho Tire on forensic identification science. *Washington and Lee Law Review*, 57(3), 879-900, 880. See also *Kumho Tire Co. v. Carmichael*, (1999): “The initial question before us is whether [Daubert’s] basic gatekeeping obligation applies only to ‘scientific’ testimony or to all expert testimony. We, like the parties, believe that it applies to all expert testimony. Finally, it would prove difficult, if not impossible, for judges to administer evidentiary rules under which a gatekeeping obligation depended upon a distinction between ‘scientific’ knowledge and ‘technical’ or ‘other specialized’ knowledge. There is no clear line that divides the one from the others... We conclude that Daubert’s general principles apply to the expert matters described in Rule 702. The Rule, in respect to all such matters, ‘establishes a standard of evidentiary reliability.’ It ‘requires a valid ... connection to the pertinent inquiry as a precondition to admissibility’” (pp. 147 – 49).

criminal sentencing determinations,<sup>51</sup> correctional institution management,<sup>52</sup> parole decisions,<sup>53</sup> and with regard to other issues such as firearm ownership.<sup>54</sup>

28. A robust body of literature exists on prospective (forward-looking) risk assessments in forensic psychological contexts; however, comparatively limited work has examined retrospective (backward-looking) risk assessments, as would be needed for a valid psychological autopsy. One research team counted over 400 different psychometric tools for prospective risk assessment worldwide.<sup>55</sup> The tools vary in their content and approach, with some consisting of a handful of variables and others claiming to consider hundreds or more.<sup>56</sup> Some of the tools are based entirely on **static risk factors** that are historical in nature and thus do not change over time (such as age at time of first offence) or are based on demographic characteristics such as gender.<sup>57</sup> Other tools also include **dynamic risk factors** that are variable and can change over time, such as age, mental health symptoms, and substance use.<sup>58</sup> Some risk

assessment tools are fully structured actuarial measures, while others use a structured clinical judgment approach.

#### *What Is a Psychological Autopsy?*

29. Psychological autopsy was developed as a method to clarify mode of death in equivocal cases by investigating factors surrounding the death and the deceased.<sup>59</sup> Psychological autopsies evolved from group-level public health and epidemiological examinations exploring risk factors for suicide. Although there is limited empirical work that extends this original scholarship to the retrospective analysis of an individual's equivocal death, psychological autopsies are used to examine the relationship between particular antecedents and suicide, with the "aim to produce as full and accurate a picture of the deceased as possible with a view to understanding why they killed themselves."<sup>60</sup>
30. Psychological autopsies rely on a set of postmortem investigative procedures to evaluate the role that psychological factors played in the death of an individual, and they have been used in many retrospective and equivocal deaths.<sup>61</sup> Psychological autopsies have become "the prime approach in studying risk factors for [completed] suicide."<sup>62</sup> Despite their frequent use, recent work demonstrates that no particular

structure or system guides the psychological autopsy process, and until very recently, no psychometric tools or structured methods directly addressed this issue.<sup>63</sup>

31. A critical review of psychological autopsies noted that they are often used to make causal inferences between mental disorder and suicide based on data that nearly all (90% or more) of those who die by suicide suffer from one or more mental disorders.<sup>64</sup> However, the review argued that psychological autopsies should be “abandoned” as a diagnostic tool for suicide because “there has been little reflection on the reliability and validity of this method,” and “they cannot constitute a valid evidence base for a strong relationship between mental disorder and suicide.”<sup>65</sup> Others have echoed this perspective.<sup>66</sup> Because psychological autopsy methods require the evaluation and diagnosis of mental disorders in the deceased by proxy (e.g., through relatives and/or friends) and often many years after the event, some scholars assert that most of the questions asked are “impossible” to answer reliably, and thus, “one cannot make valid conclusions.”<sup>67</sup>

#### *What Is Behavioural Profiling?*

32. Behavioural profiling is an investigative technique used by law enforcement, psychologists, consultants, and academics to predict the personality patterns, behaviours, and demographic characteristics of undetected offenders from

---

characteristics of offenses and victims.<sup>68</sup> It is used by law enforcement to generate or narrow down the range of possible suspects to a crime.<sup>69</sup> It is sometimes referred to by various other names, including “offender profiling,” “psychological profiling,” “criminal profiling,” “personality profiling,” “behavioural consistency analysis,” “behavioural analysis,” “criminal investigative analysis,” “crime scene analysis,” “crime action profiling,” and “case linkage analysis.”<sup>70</sup> Notably, these terms and concepts are “used in the field based solely on author preference and background, not substantive differences in terminology or meaning.”<sup>71</sup>

33. Behavioural profiling largely originated from law enforcement investigations, though there has been a shift toward academic and scientific study in the field. A recent analysis of the history, evolution, and state of the field of profiling found that considerable improvements have occurred in the scientific rigour of the field, but also that

the lack of scientific evidence on the validity and impact of profiling, despite the technique’s widespread use, seriously questions its efficacy in real world investigations, as it currently stands.<sup>72</sup>

<sup>71</sup> Fox & Farrington, 2018, 1247.

<sup>72</sup> Fox & Farrington, 2018, 1247.

34. Although behavioural profiling is often applied in active police investigations and is a popular topic for books, chapters, reports, and journal articles,<sup>73</sup> few evaluations of the profiles' accuracy or effectiveness have taken place.<sup>74</sup> Some have expressed concerns about the validity of the technique, finding that self-labeled profilers and experienced investigators are generally no better than comparison groups in predicting various characteristics of offenders.<sup>75</sup> This has led to strong critiques of behavioural profiling and "caused a dark cloud over the reputation and results being produced by the field."<sup>76</sup>
35. Some practitioners use an unstructured clinical judgment approach to behavioural profiling (see also [What Is Psychological Assessment?](#)<sup>77</sup>), whereby profiles are developed on a case-by-case basis by a trained and experienced profiler but without any particular methodology or process.<sup>78</sup> Others use more scientific approaches to

profiling, such as the subfields of case linkage analysis,<sup>79</sup> evidence-based profiling,<sup>80</sup> investigative psychology,<sup>81</sup> criminal investigative analysis,<sup>82</sup> and crime action profiling.<sup>83</sup> There is evidence that these more scientific approaches have some validity, with studies showing moderate to strong accuracy, for example, in case linkage analysis when used to link crimes to a single offender.<sup>84</sup>

36. Questions remain about the training, skills, and certifications demonstrably associated with accurate behavioural profiling performance.<sup>85</sup> There are diverse career pathways among those providing behavioural profiles. Specifically, analysis of the professional affiliations of those publishing in the field shows involvement from psychologists (most commonly), criminologists, law enforcement or government officials, FBI Special Agents and the FBI Behavioural Science Unit, and occasionally mathematicians, statisticians, epidemiologists, and journalists.<sup>86</sup> However, studies suggest that empirically demonstrated proficiency in behavioural profiling “predominantly derives from the disciplinary acumen inherent to clinical forensic psychiatry and psychology (i.e., forensic mental health sciences).”<sup>87</sup> However, the authors making this comment

were careful to point out that the relevant acumen was not necessarily limited to psychiatrists and psychologists and could also be found among “law enforcement personnel who have spent a large proportion of their careers specifically involved with the development, learning, and application of profiling methodologies.”<sup>88</sup>

37. While some scholars have suggested that the use of behavioural profiling as an investigative tool should cease, given the lack of scientific foundations and valid empirical support,<sup>89</sup> others have suggested further scientific development is necessary even while it continues to be used by law enforcement.<sup>90</sup> And although behavioural profiling is used regularly in police investigations, some scholars assert “the field currently does not rise to the level of scientific credibility according to the 1993 *Daubert* standard.”<sup>91</sup> These commentators further suggest that although the field has advanced, the answer to the legendary question “are we [*behavioural profilers*] better at this than a bartender” remains largely unknown.<sup>92</sup>

### Best Practices for Psychological Assessments

38. Psychological assessors must follow the legal rules guiding practice in their jurisdiction, and they need to meet at least the minimum **standards of practice** in the field, which are laid out in and may be enforceable under ethics codes.<sup>93</sup> Beyond those

- <sup>97</sup> Heilbrun et al. (2009) have proposed the following as a best practice standard for mental health experts proffering opinion evidence: “Opinions should be data based, including thorough consideration given to all sources of information: comprehensive notes of litigant’s interview responses; results of all psychological tests and instruments; information provided by third parties; and a review of records. Relevant studies, published in peer review journals on issues related to the specific case, should be considered as well. Findings should be examined for consistency within and between data sources; major inconsistencies may preclude forming an opinion. Whenever possible, opinions should incorporate sources with established reliability, and with validity for purposes consistent with the present evaluation. Alternative opinions conflicting with the opinions reached, should be considered, and rejected when they are less consistent with all of the information available to the expert” (p. 55). attention to ethics, law, science, and practice. But as with any consensus-derived standards, these are only as good as consensus in a field.

39. Some scholars have pointed to the limits of current practice guidelines,<sup>101</sup> lamenting the fact that there are no enforceable practice guidelines in forensic psychology.<sup>102</sup> These scholars suggest that for practice guidelines to substantially impact the field, they must be incorporated into a document with regulatory authority, adopted by an organization with the authority to enforce violations, or sufficiently representative of the field's standard of practice to inform legal determinations of standard of care in malpractice litigation.<sup>103</sup> However, this has not happened for most types of forensic psychological assessment.
40. Notwithstanding this concern, in the following sections of our report we discuss issues that attentive psychologists, forensic scientists, and mainstream natural scientists<sup>104</sup> regard as important for understanding the quality and value of scientific opinions,<sup>105</sup> including psychological assessments, risk assessments, psychological autopsy, and behavioural profiling.
41. Below, we define and discuss the core components as Best Practice Considerations (numbered 1 to 8) before providing some specific questions that the Commission may

---

<sup>101</sup> Heilbrun & Brooks, 2010.

<sup>102</sup> There are some exceptions. For example, some state licensing boards have adopted practice guidelines (e.g., 2010 American Psychological Association Guidelines for Child Custody Evaluations in Family Law Proceedings) as a formal part of their regulatory scheme.

<sup>103</sup> Heilbrun et al., 2009.

wish to consider when evaluating these best practices for a psychological autopsy or a behavioural profile. Although there are dissenting views about some of the considerations we identify (for discussions see [Alternative Views and Disagreements](#)), many of the questions we ask and issues we raise have been posed by others in articles and manuals over decades of critical scholarship relating to psychological opinions in forensic contexts.<sup>106</sup> Similar questions have also been raised to help interrogate the quality of traditional forensic science opinions.<sup>107</sup> Accordingly, we believe our views represent a well-established perspective on the evaluation of forensic and psychological assessments.

### 1. Foundational Validity

42. According to the Presidents' Council of Advisors on Science & Technology, the foundational validity of a method or process requires:

...that it be shown, based on empirical studies, to be repeatable, reproducible, and accurate, at levels that have been measured and are appropriate to the intended application. Foundational validity, then, means that a method can, in principle, be reliable.<sup>108</sup>

This definition suggests we consider the repeatability, reproducibility, and accuracy of the method used by the practitioner when forming their opinion. Other scholars have offered similar suggestions.<sup>109</sup>

43. When considering psychological assessments including risk assessments, psychological autopsy, and behavioural profiling, it is important to understand that there is no generally accepted standardized method used by psychologists or other practitioners who undertake these tasks.<sup>110</sup> Professional bodies, scholars, and practitioners have proposed a number of guidance documents for practitioners undertaking forensic psychological assessments,<sup>111</sup> for example when conducting assessments,<sup>112</sup> writing forensic reports,<sup>113</sup> completing capital sentencing

<sup>108</sup> President's Council of Advisors on Science and Technology, 2016, 4.

evaluations,<sup>114</sup> disability evaluations,<sup>115</sup> child custody disputes,<sup>116</sup> and choosing and reporting assessment tools.<sup>117</sup> However, these guides tend to be non-specific and aspirational, are often not endorsed by professional organizations, and are intentionally not exhaustive, mandatory, or enforceable.<sup>118</sup>

44. Instead, each practitioner is left to use their own preferred method to define, analyze, synthesize, and combine information, to make inferences, and ultimately to form their conclusions so long as they are adhering to minimum standards of practice.<sup>119</sup> Psychologists' choices of psychometric tools, which combination of them to use, and what collateral information to gather have been shown to vary widely between and within the types of opinions being provided.<sup>120</sup> Indeed, an American Psychological Association work group recommended clinicians use a multimethod assessment battery with multiple tools;<sup>121</sup> however, the tremendous diversity of approaches is a

problem for establishing foundational validity.<sup>122</sup> What is more, very few of these approaches or best practice guidelines for forming opinions have been subjected to **end-to-end evaluation**.<sup>123</sup> Thus, their accuracy, repeatability, and reproducibility are largely unknown.

45. The picture is somewhat different when it comes to the foundational validity of specific psychometric tools that practitioners might use to inform their professional judgment. Many but not all psychometric or structured assessment tools have been tested to establish some aspect/s of their foundational validity.<sup>124</sup> Since 1954, the Standards for Educational and Psychological Testing<sup>125</sup> has provided psychologists authoritative guidance on test development and evaluation in terms of reliability and validity.<sup>126</sup> For example, the validity standards require “clear articulation of each intended test score interpretation for a specific use ... and appropriate validity evidence in support of each intended interpretation,” with 25 additional guidelines unpacking this requirement.<sup>127</sup>

---

<sup>122</sup> American Educational Research Association (AERA), American Psychological Association (APA), and National Council on Measurement in Education (NCME). (2014). *Standards for educational and psychological testing*. American Educational Research Association Press. As the Standards indicate (p. 155), “It is understood that little, if any, literature exists that describes the validity of interpretations of scores from highly customized or flexible batteries of tests... If the literature is incomplete, the resulting inferences may be presented with the qualification that they are hypotheses for future verification rather than probabilistic statements regarding the likelihood of some behaviour that imply some known validity evidence.”

<sup>123</sup> AERA, APA, & NCME, 2014; Neal et al., 2019.

<sup>124</sup> 90% of psychological assessment tools used by psychologists in legal settings have been tested, per Neal et al., 2019.

<sup>125</sup> AERA, APA, & NCME, 2014.

<sup>126</sup> The Canadian Psychological Association explicitly recommends the use of these Standards. From the Canadian Psychological Association (2021) publications website, “Guidelines for the Use of Educational and Psychological Tests: CPA does not have guidelines but recommends the use of the Standards for Educational and Psychological Testing approved by the American Educational Research Association, the American Psychological Association, and the National Council on Measurement in Education.”

<sup>127</sup> AERA, APA, & NCME, 2014, 23.

46. These psychometric (and technical) properties are often reported in specific test manuals, in the primary research literature, and in secondary aggregated compendiums and reviews such as the Mental Measurement Yearbook<sup>128</sup> and the Compendium of Neuropsychological Tests.<sup>129</sup> This means there is a wealth of available knowledge about aspects of the foundational validity of a number of tools in routine use. But it is important to note that the performance of many tools is either unknown or inadequate. Indeed, Neal and colleagues found that only about 40% of the tools that psychologists reported using in legal cases have generally favorable measurement properties.<sup>130</sup>
47. Like calls for forensic science to become more scientific,<sup>131</sup> there have been calls for forensic psychology to transition to more evidence-based<sup>132</sup> and science-based practices.<sup>133</sup> One such recommendation is “for a clinical psychologist writing a report to put nothing in it that cannot be supported by research or professional literature.”<sup>134</sup> Another recommendation is that psychological tools should be used only where published scientific peer-reviewed articles substantiate the validity of the tool for the

specific intended use.<sup>135</sup> A third is that the field should move toward scientifically-informed standardized batteries for specific referral questions.<sup>136</sup> Until these recommendations are enforced, it is important to assess the foundational validity of a psychological opinion.

#### ACCURACY

48. All subjective or judgment-based procedures are susceptible to error.<sup>137</sup> In simple terms, accuracy is how often a method or subjective reasoning process results in a correct opinion or outcome. It can also be thought of as the inverse, or opposite, of the error rate associated with the technique. Within psychology, the terms “accuracy,” “**reliability**,” and “**precision**” are sometimes used interchangeably. In the context of psychological assessments, accuracy can be understood as how often methods like the ones the practitioner used result in correct opinions of the type the practitioner provided. As described in the section [What Is Psychological Assessment?](#), structured actuarial methods with explicit decision rules, statistical integration of data, and little room for discretion consistently outperform unstructured clinical judgment methods in terms of accuracy.<sup>138</sup>
49. When it comes to assessing the accuracy of a forensic psychological assessment, it is possible to look at whether legal factfinders agree with the practitioners’ opinion. But this approach involves “soft” criteria, meaning that the accuracy of the outcome is inferred from agreement rather than in reference to “hard” criteria such as known or

<sup>136</sup> Neal et al., 2019.

<sup>137</sup> Edmond et al., 2018.

<sup>138</sup> Ægisdóttir et al., 2006; Dawes et al., 1989; Hanson & Morton-Bourgon, 2009.

knowable objective ground-truth. Such an approach is therefore suboptimal. There is presently no accepted objective ground-truth for most forensic psychological assessments, meaning there is no real way to know whether or how accurate they are.<sup>139</sup> However, in general, the accuracy of a psychological assessment is likely to be higher when examining a current state (e.g., current suicidal ideation), as compared to past states (e.g., mental state at time of offence or suicide) or future states (e.g., future violence or suicide risk).<sup>140</sup>

50. When it comes to the accuracy of psychometric tools, the Standards for Educational and Psychological Testing note that there must be appropriate evidence to show the reliability/precision of the interpretations that follow from each possible score on a test. They also provide twenty detailed guidelines relating to test reliability.<sup>141</sup> Manuals for specific structured assessment tools generally include some information to establish the accuracy of a particular test when administered under ideal or controlled conditions (e.g., how often a risk assessment tool correctly classifies an individual as low/moderate/high risk of reoffending). However, this information about accuracy needs to be interpreted in light of the tool's design.
51. Most psychometric tools are either criterion-referenced or norm-referenced.<sup>142</sup> Criterion-referenced tools adopt predetermined standards of performance, such as how well someone can perform a particular skill or perform activities of daily living.

---

<sup>139</sup> But see Mossman, D., Bowen, M.D., Vanness, D.J., Bienenfeld, D., Correll, T., Kay, J., Klykylo, W.M., & Lehrer, D.S. (2010). Quantifying the accuracy of forensic examiners in the absence of a "gold standard." *Law and Human Behaviour*, 34(5), 402–17, <https://doi.org/10.1007/s10979-009-9197-5>.

<sup>140</sup> Acklin et al., 2015; Melton et al., 2017.

<sup>141</sup> AERA, APA, & NCME, 2014.

<sup>142</sup> Wasserman & Bracken, 2013.

Norm-referenced tools examine how people compare to a specific subset of the population referred to as a **norming sample**. When psychometric tools are developed, they often attempt to make information about a given person's performance on the tool meaningful compared to other people, and because it is not feasible to measure everyone in a relevant population, tests are usually developed by extrapolating from samples of test-takers. The sample of people tested during the development of a psychometric tool and against which future test-takers are compared is called the norming sample. Thus, the quality of a particular test is established in the context of the particular norming group. Importantly, there is no guarantee that the adequacy of a psychometric tool will generalize from the norming sample or context to another sample or context.

52. This issue of **generalizability** (and others)<sup>143</sup> was recently considered by the Supreme Court of Canada in *Ewert v. Canada*.<sup>144</sup> Such concerns also apply when a particular test or method is used to answer a forensic question for which the test was not explicitly designed or validated. As an example, concerns have been raised about using a tool designed to measure personality features associated with psychopathy – the Psychopathy Checklist-Revised – to make life or death recommendations in capital sentencing proceedings based on an individual's propensity for violence in custody.<sup>145</sup> Modifications to testing procedures (e.g., administration with/out rest breaks, or in

group/individual testing sessions) can also affect the generalizability of a test. As a result, the accuracy of a psychological opinion or of a psychometric score cannot be assumed.

#### REPEATABILITY

53. Repeatability refers to the extent to which a method consistently produces the same results when used by the same person under the same circumstances. Within psychology this is commonly referred to as *intrarater reliability*.<sup>146</sup> This within-person consistency is a “basic and essential” component of a foundationally valid method.<sup>147</sup> If a practitioner’s tools or approach do not consistently lead to the same conclusion from the same information, then this suggests low foundational validity. All else being equal, the more subjective, adaptable, and intuitive the method used by the practitioner, the lower the chance that it will produce the same result when repeated on another occasion. However, in practice, data about repeatability is difficult to obtain because it is unlikely a practitioner will be able to completely forget an earlier case so they can approach it independently a second time – and even if they could, the circumstances and some mental states of the evaluatee also can change over time. Thus, to date there is little if any empirical evidence about the repeatability of psychologists’ opinions.<sup>148</sup>

---

<sup>146</sup> AERA, APA, & NCME, 2014.

<sup>147</sup> Dror & Murrie, 2018.

<sup>148</sup> Dror & Murrie, 2018.

REPRODUCIBILITY

54. Reproducibility is about whether an approach consistently produces the same results when used by different people under the same circumstances. Psychologists commonly refer to this as *interrater reliability*.<sup>149</sup> If a psychometric tool or psychological assessment method does not lead to consistent conclusions when it is used by different practitioners, this undermines the foundational validity of the opinion.<sup>150</sup> Again, the more subjective, adaptable, and intuitive the method used by a practitioner, the less likely it is that two practitioners will be able to faithfully produce the same method to reach the same result. This concern is reinforced by clear evidence that different practitioners use different thresholds for diagnosing and determining a range of forensically relevant outcomes.<sup>151</sup> Task difficulty, limited training and certification, unstandardized methods, individual practitioner differences, and bias have all been identified as factors that may contribute to disagreement and inconsistency between practitioners.<sup>152</sup>

*2. Validity as Applied*

55. Validity as applied is the accuracy, repeatability, and reproducibility of a method in practice.<sup>153</sup> In particular, “the forensic examiner must ... be capable of reliably applying

<sup>149</sup> AERA, APA, & NCME, 2014.

<sup>150</sup> Faust & Ziskin, 1988.

<sup>153</sup> National Research Council, 2009; Presidents’ Council of Advisors on Science and Technology, 2016.

the method and must actually have done so.”<sup>154</sup> Validity as applied can be approached in two ways: via the practitioner’s proficiency and/or the field validity of their tools and approach.

#### PROFICIENCY

56. Proficiency refers to a practitioner’s ability to apply a foundationally valid tool or method to achieve the expected outcome (e.g., an accurate opinion). If a practitioner is not able to do so, then they are not proficient in the method, and the method is not valid when applied by that practitioner. Furthermore, if a practitioner’s performance is not exemplary or materially better than a layperson’s (e.g., their opinions are not more accurate than that of novices), then it may be a mistake to give weight to their opinions.<sup>155</sup> Indeed, their opinions may not satisfy expert admissibility rules in many jurisdictions.<sup>156</sup>
57. Proficiency is often assumed by virtue of certifications, qualifications, memberships, and continuing professional development.<sup>157</sup> However, the relationship between proficiency and these credentials is imperfect. Some credentials require demonstrations of relevant proficiencies (e.g., objectively correct administration of particular psychometric tools), but many others do not. For example, the mere fact of completing a continuing education training course is not clearly associated with

<sup>154</sup> Presidents’ Council of Advisors on Science and Technology, 2016, 6.

<sup>155</sup> Fox & Farrington, 2018; Martire & Edmond, 2017; Towler, A., White, D., Ballantyne, K., Searston, R.A., Martire, K.A., & Kemp, R.I. (2018). Are forensic scientists experts? *Journal of Applied Research in Memory and Cognition*, 7(2), 199–208, <https://doi.org/10.1016/j.jarmac.2018.03.010>.

<sup>156</sup> E.g., for Australia, see Martire & Edmond, 2017. For Canada, see R. v. J.-L.J. (2000). For the United States, see Neal et al., 2019.

<sup>157</sup> Martire & Edmond, 2017; Presidents’ Council of Advisors on Science and Technology, 2016.

competent, proficient, or improved psychological practice.<sup>158</sup> Among psychologists, there is also a lack of and noted ambivalence towards the objective assessment of gains resulting from continuing professional education courses,<sup>159</sup> so it is unclear how closely ongoing education and proficiency are linked.

58. Just as it is difficult to establish foundational accuracy (see also [1. Foundational Validity](#)), it is difficult to establish the proficiency of practitioners completing forensic psychological assessments.<sup>160</sup> This is because psychologists often make predictions about future events and tend not to track or have access to information about relevant outcomes. Nevertheless, it is possible with careful planning to assess the accuracy of many (but not all) predictions.<sup>161</sup> Failing that, information about consistency and bias<sup>162</sup> or performance on tasks replicating case work<sup>163</sup> may be used to estimate whether performance is likely to be proficient. However, direct demonstrations of individual proficiency are preferable to indirect estimates obtained from these proxy measures.
59. In general, it may also be worthwhile for the Commission to be aware that feedback about the accuracy of judgments is a vital component of the corrective mechanisms

<sup>162</sup> Dror & Murrie, 2018.

<sup>163</sup> Guarnera et al., 2017.

necessary to develop proficiency.<sup>164</sup> Therefore, performance that occurs in environments without routine, systematic, and objective feedback is less likely to be accurate than performance in environments where high-quality feedback is readily available.<sup>165</sup> There is also an extensive body of research that suggests experience alone is not sufficient assurance that a practitioner will be highly proficient. The relationship between years of experience and quality of performance is notably weaker than generally assumed.<sup>166</sup> Therefore, the Commission may wish to exercise caution in relying on a practitioner's statements about years of experience where that experience does not routinely include the feedback necessary to facilitate effective correction.

#### FIELD VALIDITY

60. Field validity relates to the performance of a tool or method outside the laboratory “under routine practice conditions typical of real-world work,”<sup>167</sup> where information may be inaccurate or incomplete, testing conditions may be suboptimal, cases may be more complex<sup>168</sup> or confronting, and time or financial resources may be limited.
61. Overall, there is little empirical evidence available regarding the field validity of the methods used by practitioners to produce forensic psychological opinions, but what

<sup>167</sup> Guarnera et al., 2017, 144.

<sup>168</sup> Acklin et al., 2015.

there is suggests it is likely to be modest.<sup>169</sup> There is also little evidence that the available information about the foundational validity of psychometric tools generalizes to the field. For example, studies examining the reproducibility of real-world forensic psychological opinions typically find that the agreement between examiners is lower than desirable and frequently lower than the agreement reported in validation studies and test manuals.<sup>170</sup>

62. Beyond the field validity issues associated with individual psychometric tools is the issue of tool combination. Relatively robust psychometric tools are routinely combined with other assessment tools in countless unstudied ways to form assessment batteries.<sup>171</sup> These batteries are highly individualized and generally require significant inferential leaps to bridge the gap between what the psychometric tool was designed to measure and the referral question asked.<sup>172</sup> (See also [What Is Psychological Assessment?](#) and [1. Foundational Validity](#).) As the Standards for Educational and Psychological Testing indicate:

It is understood that little, if any, literature exists that describes the validity of interpretations of scores from highly customized or flexible batteries of tests...<sup>173</sup>

- <sup>171</sup> Neal & Grisso, 2014a.
- <sup>172</sup> Neal et al., 2019.
- <sup>173</sup> AERA, APA, & NCME, 2014, 155.

Therefore, the extent to which these inferential leaps result in accurate, repeatable, and reproducible answers to forensic questions is largely unknown.

63. Although there are calls for the field to move toward scientifically-informed standardized batteries for specific referral questions,<sup>174</sup> it has also been noted that:

For a field so rooted in the study of human behaviour, cognition and psychology, there has been surprisingly little attention to the role of human experts and human decision-making in forensic psychological assessment. Put bluntly, the field tends to value reliability and objectivity but tends to consider them more as qualities to be studied and maximized in instruments, with less attention to studying and maximizing these among the human experts rendering forensic opinions.<sup>175</sup>

64. Thus, the Commission may need to exercise caution in generalizing any empirical evidence supporting the foundational validity of a psychological assessment to the validity of the assessments completed in an individual case. Both psychometric tools and practitioner judgments can be negatively affected by the complex challenges of routine practice.

### 3. Bias

65. When integrating information to make judgments and decisions, people – including forensic experts reaching professional judgments – arguably rely on two types of thinking processes. These two thinking processes are proposed to be at the core of human cognition.<sup>176</sup> Type-1 processes are automatic: they are quick, happen without our awareness or intention, and generally help people function in a world full of information. Type-2 processes are deliberate: they are effortful, require attention, and

<sup>174</sup> Archer et al., 2016; Neal et al., 2019.

<sup>176</sup> Evans, J.S.B. & Stanovich, K.E. (2013). Dual-process theories of higher cognition: Advancing the debate. *Perspectives on Psychological Science*, 8(3), 223-41, <https://doi.org/10.1177/1745691612460685>.

take more time. These two types of cognition are believed to work in tandem to help humans make sense of and integrate information to reach conclusions and decisions.<sup>177</sup> Bias – any systematic factor other than the truth that affects a judgment<sup>178</sup> – can enter into human judgments either through type-1 or type-2 thinking processes.<sup>179</sup>

66. Bias is traditionally conceptualized in law as an intentional behaviour, such as a person aiming for a particular decision because they have an interest in or will obtain benefit from a specific outcome.<sup>180</sup> Similarly, ethics codes for psychologists urge practitioners to “avoid partisan presentation of unrepresentative, incomplete, or inaccurate evidence that might mislead finders of fact.”<sup>181</sup> Although these explicit, purposeful type-2 thinking-related biases can and do emerge among forensic experts on occasion, the more common and insidious way bias enters forensic evaluations is through type-1 thinking processes.<sup>182</sup> These type-1 automatic, unconscious mental reflexes and thinking styles unintentionally shape perceptions, problem-solving, and

West and Kenny offer a standardized definition of bias, measurable parameters for use across disciplines and decision contexts, and mathematically defined variables that should be measured and considered when studying bias, toward the aim of building a more comprehensive and generalizable understanding of how bias affects human judgment.

<sup>179</sup> Neal, T.M.S., Lienert, P., Denne, E., & Singh, J.P. (in press). A general model of cognitive bias in human judgment and systematic review specific to forensic mental health. *Law and Human Behaviour*.

<https://doi.org/10.1111/1468-2230.12424>. In *White Burgess Langille Inman v. Abbott and Haliburton Co.* (2015) SCC 23, Canada’s courts explicitly addressed the issue of an expert’s impartiality, requiring that in order to be admitted as an expert and allowed to provide testimony, the expert must provide an impartial, independent, unbiased opinion.

<sup>181</sup> American Psychological Association, 2013a, 8.

<sup>182</sup> Neal et al., in press; Neal, T.M.S. & Grisso, T. (2014b). The cognitive underpinnings of bias in forensic mental health evaluations. *Psychology, Public Policy, and Law*, 20(2), 200–11, <https://doi.org/10.1037/a0035824>.

decision-making.<sup>183</sup> These forces are subtle, powerful, and pervasive<sup>184</sup> but are not the result of dishonesty or inadequate training.<sup>185</sup>

67. While entirely unbiased and impartial evaluations are an aspirational goal for all practitioners completing psychological assessments,<sup>186</sup> bias has been identified as a particular concern with forensic opinions.<sup>187</sup> There is no evidence that the forensic opinions provided by psychologists are exempt from the influences of bias.<sup>188</sup> Indeed, where there are no sound operational procedures and performance guidelines<sup>189</sup> and where information is ambiguous, incomplete, and complex,<sup>190</sup> the potential for bias is likely to increase.<sup>191</sup> Furthermore, given that forensic psychology practitioners collect and incorporate extensive collateral and contextual information,<sup>192</sup> and there are few standardized procedures to guide the field,<sup>193</sup> forensic psychology opinions are perhaps particularly vulnerable to biasing effects.<sup>194</sup>
68. There are a number of empirical studies that reinforce concerns about bias in forensic psychological assessments. For example, a recent systematic review of research on

<sup>183</sup> Cooper, G.S. & Meterko, V. (2019). Cognitive bias research in forensic science: A systematic review. *Forensic Science International*, 297, 35–46. <https://doi.org/10.1016/j.forsciint.2019.01.016>.

forensic psychological assessments found evidence of adversarial allegiance,<sup>195</sup> hindsight bias,<sup>196</sup> and confirmation bias,<sup>197</sup> among other issues.<sup>198</sup> These three examples of type-1 biasing influences are but a small portion of the hundreds of different types of biases that can affect human judgment.<sup>199</sup>

69. There is also no clear evidence that practitioners routinely take the quality assurance steps necessary to manage the potential impacts of unconscious bias in their work, even though many practitioners strive for objective and unbiased practice,<sup>200</sup> and some acknowledge the existence of bias risk.<sup>201</sup> Practitioners could employ a range of strategies to insulate their decisions from possible biasing contamination, such as embracing conditions that introduce structure and reduce discretion in their decision process (e.g., using actuarial or structured clinical judgment methods rather than unstructured methods)<sup>202</sup> and seeking to limit access to biasing information, such as

<sup>195</sup> Adversarial allegiance is the unintentional tendency for forensic experts to draw conclusions that support the view of their adversarial retaining party. See, for example, Murrie et al., 2013.

<sup>196</sup> Hindsight bias is the tendency to believe a specific event is more predictable after the fact (in hindsight) than it was before the event happened (in foresight). See, for example, Beltrani, A., Reed, A.L., Zapf, P.A., & Otto, R.K. (2018). Is hindsight really 20/20? The impact of outcome information on the decision-making process. *International Journal of Forensic Mental Health*, 17(3), 285–96, <https://doi.org/10.1080/14999013.2018.1505790>.

<sup>197</sup> Confirmation bias is the tendency to seek and overvalue evidence that supports one's opinion and undervalue evidence that disconfirms it. See, for example, Griffith, R.L. (2019). Forensic confirmation bias: Is consider-the-opposite an effective debiasing strategy? Master's thesis, Washburn University, <https://wuir.washburn.edu/handle/10425/1962>.

<sup>202</sup> Guarnera et al., 2017.

through blinding procedures when known biasing potential is present.<sup>203</sup> They can employ other strategies as well, such as stating rival hypotheses and counterfactuals,<sup>204</sup> seeking independent peer review,<sup>205</sup> and engaging in archival self-monitoring.<sup>206</sup> However, many practitioners report using ineffective strategies like introspection, while others believe themselves immune to bias.<sup>207</sup>

70. One further distinction to address here that is much discussed in the forensic sciences is the difference between “task relevant” and “task irrelevant” information. Both of these types of information have the potential to be biasing – and so both types of information need to be carefully handled. According to the National Commission on Forensic Science, “task relevant” information is:

... necessary for drawing conclusions: (i) about the propositions in question, (ii) from the physical evidence that has been designated for examination, (iii) through the correct application of an accepted analytic method by a competent analyst.<sup>208</sup>

71. Because this information is necessary, it is not appropriate to exclude it altogether, but practitioners may need to consider using a **linear sequential unmasking** technique to preserve the objectivity of their analysis for as long as possible.<sup>209</sup> By documenting this

process, both practitioners and observers can see when and how bias may be affecting the application of the technique or resultant opinions. In contrast, “task irrelevant” information is anything that is not necessary for drawing conclusions and so should be entirely excluded from the task.

72. The issues associated with and definitions of task (ir)relevant information are beginning to be addressed in psychological assessment, but much work remains to be done.<sup>210</sup> The distinction between task relevant and irrelevant information is an important one, requiring formalization in this context. Not all information available to a practitioner is necessary for completing or drawing conclusions in a psychological assessment. For example, information about the hiring party is not relevant for conclusions about an individual’s mental state. Moreover, there are likely to be benefits from withholding some information until later in the process to preserve objectivity for as long as possible. For example, the presence or absence of a suicide note or the diagnostic history of the assessee may be better considered later or earlier in the process depending on the referral question the practitioner is addressing. Ultimately, these are thorny issues for forensic psychological assessments that require further careful consideration from the field but are also of relevance for the Commission in assessing the potential for bias in a psychological assessment.

#### *4. Quality Assurance*

73. Quality assurance is a method used to prevent mistakes and avoid problems in service or product delivery, which the International Organization for Standardization (ISO)

---

<sup>210</sup> Neal et al., in press.

defines as “part of quality management focused on providing confidence that quality requirements will be fulfilled.”<sup>211</sup> Quality assurance involves administrative and procedural standards to ensure the requirements of a particular kind of service, product, or activity will be met. It involves systematic monitoring and measurement, along with comparison against an ideal or goal and an associated feedback loop to eliminate error.<sup>212</sup> Standards for the quality of raw materials, assemblies, services related to production, and inspection are typically included in quality assurance, and many industries around the world now rely on quality assurance models.<sup>213</sup>

74. There are not yet national or international quality assurance standards in forensic psychology. Licensing rules are a form of quality assurance for psychological practice in a general sense, but they vary by jurisdiction and do not govern the particulars of forensic practice. The ethical rules and codes of conduct that apply for psychology and even forensic psychology (see also [8. Ethical Obligations and Codes of Conduct](#)) are relevant for quality assurance, but they do not include enforceable standardization, no feedback loops are built in, and there is no comparison against an ideal or target outcome; rather, these documents simply provide guidance and suggestions for how psychologists should behave.

75. Several scholars have written about the need to improve the quality of forensic assessment practices,<sup>214</sup> along with particular steps that could be taken toward quality assurance. For example, Wettstein has reviewed quality and quality improvement issues for forensic mental health assessment and suggested several steps to improve quality.<sup>215</sup> These ideas include forensic service credentialing and certification by law or policy, establishing quality guidelines, defining quality measures and tools, incentivizing quality, educating referral sources about focusing referral questions, encouraging cross-examination about quality assurance activities, and peer review of evaluations, reports, and testimony, among other ideas.
76. In response to concerns about poor service quality, many jurisdictions have developed processes and procedures for quality assurance standards in forensic mental health, including training, certification, and credentialing programs.<sup>216</sup> For example, as of 2015, nineteen US states had specific programs for training and certifying mental health professional evaluators of competency to stand trial.<sup>217</sup> These programs differ substantially, and most are not built with robust quality assurance practice aims; but jurisdictions with true quality control processes such as sound certification processes with rigorous standards for initial and maintenance of certification, feedback processes, comparison to target outcomes, and enforceable standards, including

---

<sup>214</sup> See, for example, Heilbrun & Brooks, 2010.

<sup>216</sup> Farkas, G., DeLeon, P., & Newman, R. (1997). Sanity examiner certification: An evolving national agenda. *Professional Psychology: Research and Practice*, 28, 73–76. <https://doi.org/10.1037/0735-7028.28.1.73>.

<sup>217</sup> Gowensmith, W.N., Pinals, D.A., & Karas, A.C. (2015). States' standards for training and certifying evaluators of competency to stand trial. *Journal of Forensic Psychology Practice*, 15(4), 295–317. <https://doi.org/10.1080/15228932.2015.1046798>.

decertification, have higher quality forensic assessment reports than jurisdictions without such programs.<sup>218</sup>

77. In addition, psychologists can voluntarily seek board certification, such as by the American Board of Forensic Psychology or the American Board of Police & Public Safety Psychology, both affiliates of the American Board of Professional Psychology. This is a prestigious designation, with only about 4% of licensed psychologists in the United States being board certified.<sup>219</sup> Certification by a board like this involves some quality assurance processes, such as verification of education, relevant training, licensure, experience, and demonstrated competence. The demonstration of competence occurs through a written test, a review of written work products that are evaluated against a target outcome, and an oral examination.<sup>220</sup>

78. With regard to the scoring of psychological tests, the Standards for Educational and Psychological Testing require that scoring protocols be established as a quality assurance mechanism:

Test scoring that involves human judgment should include rubrics, procedures, and criteria for scoring. When scoring of complex responses is done by computer, the accuracy of the algorithm and processes should be documented.<sup>221</sup>

<sup>218</sup> See, for example, Massachusetts Department of Mental Health. (2018). *Designated forensic professional procedures manual*, <https://www.mass.gov/doc/designated-forensic-professional-procedures-manual/download>; Otto, R.K. & Heilbrun, K. (2002). <sup>221</sup> AERA, APA, & NCME, 2014, 118 (Standard 6.8).

In addition, those responsible for the scoring of tests are expected to establish and document quality control processes and criteria, with adequate training provided. The quality of scoring is to be monitored and documented, with systemic scoring errors documented and corrected.<sup>222</sup>

79. To move the field of (forensic) psychological assessment as a whole toward enforceable quality assurance processes, relevant guidelines such as those offered by the National Research Council<sup>223</sup> and others<sup>224</sup> for assuring the quality of forensic science more broadly could be implemented. These procedures should be “designed to identify mistakes, fraud, and bias; confirm the continued validity and reliability of standard operating procedures and protocols; [and] ensure that best practices are being followed.”<sup>225</sup> Some specific suggestions include developing standardized vocabularies, ontologies, and scales for interpreting diagnostic tests; ongoing proficiency testing; hiring qualified personnel and providing training to keep their knowledge up to date; and the use of written protocols to guide practice.
80. Furthermore, the National Research Council has suggested that laboratories (or practice facilities in the case of psychology) should have to be accredited, as well as professionals being individually certified, prior to offering forensic services or being allowed to testify as a forensic professional. With regard to determining “appropriate standards for accreditation and certification,” the Council has noted that “established

<sup>225</sup> National Research Council, 2009, 26.

and recognized international standards, such as those published by the International Organization for Standardization (ISO)” should be considered.<sup>226</sup> Certification should require, “at a minimum, written examinations, supervised practice, proficiency testing, continuing education, recertification procedures, adherence to a code of ethics, and effective disciplinary procedures.”<sup>227</sup>

### 5. Opinion Expression

81. Practitioners providing psychological opinions in forensic contexts often do not have first-hand experience of the facts of the case. Instead, they are asked to investigate and opine about past or future states, situations, or events. Consequently, forensic psychological opinions must acknowledge room for doubt about what did or will happen and should not exaggerate or understate the certainty associated with that opinion.<sup>228</sup> Indeed, unqualified definitive expressions are considered scientifically unsupported according to the National Research Council<sup>229</sup> and are therefore problematic if used in psychological assessments.
82. Specifically, it is important that definitive forms of expression (e.g., the person of interest did/not die by suicide; will/not commit a serious violent offence) are replaced with appropriately qualified verbal or numerical expressions of uncertainty such as “one chance in ten,” “highly likely,” “60% of people,” or “30% of people with similar scores did so within five years.” Expressions that do not provide some indication of

<sup>229</sup> National Research Council, 2009.

uncertainty likely warrant critical evaluation. However, even appropriately qualified and modest statements need to be carefully considered, as different communication formats (e.g., probability, frequency, category, relative risk, sample recidivism rates) can affect the practitioners' judgments,<sup>230</sup> as well as how they are perceived by others.<sup>231</sup> Ideally, the methods for communication employed by a practitioner would be carefully considered and empirically evaluated.<sup>232</sup> However, evidence suggests practitioners vary in their preferences and employment of communication strategies, and not all strategies in use are empirically informed.<sup>233</sup>

83. When communicating the results of psychometric testing, some structured assessment tools require that practitioners use particular forms of expression (e.g., the Violence Risk Assessment Guide employs risk ratios based on normative data for practitioners to use in reports and opinions;<sup>234</sup> the Static-99R allows practitioners to convey empirically-informed results using risk categories [low, moderate, high], relative risk [compared with others], or normative sample recidivism rate [x% within five

<sup>234</sup> Davies, S.T., Helmus, L.M., & Quinsey, V.L. (2022). Improving risk communication: Developing risk ratios for the VRAG-R. *Journal of Interpersonal Violence*, 37, 835–62. <https://doi.org/10.1177/0886260520914555>.

years<sup>235</sup>). However, there are questions even about the efficacy of these approaches, and optimal methods for communicating the results of many psychometric tools are either not stated or have not been explicitly tested. This means there is substantial variability in the reporting of test results. This variability reinforces concerns that practitioners have not yet reached agreement or consensus about the precise meaning of many of the terms that are used.<sup>236</sup> Worries about standardization and agreement also apply to the formulation and reporting of psychological opinions more broadly, whether based on structured assessment tools or not.<sup>237</sup>

84. The absence of an agreed and validated vocabulary for describing the strength and certainty of a conclusion threatens to undermine both the repeatability and reproducibility of psychological opinions. Specifically, the absence of a consistent definition for many terms and the absence of proscribed language both decrease the chances that the same procedures will consistently result in the same conclusion when completed by the same or different practitioners. Thus, practitioners may appear to disagree with each other because they have chosen different words to express the same result, or, conversely, they may appear to agree with each other because they have chosen the same words to communicate inherently different opinions. Limiting

---

<sup>235</sup> Varela et al., 2014.

<sup>236</sup> Guarnera et al., 2017; National Research Council, 2009.

<sup>237</sup> Heilbrun & Brooks, 2010; Karson & Nadkarni, 2013.

the use of jargon<sup>238</sup> and providing glossaries,<sup>239</sup> definitions, and reproductions of reporting scales/terminology can reduce the potential for misinterpretation of psychological findings, but individual practitioners vary in their use of these strategies.<sup>240</sup>

85. Finally, communicating uncertainty about the interpretations of unvalidated test batteries is critically important. (See also the subject of field validity in [2. Validity as Applied](#)). As the Standards for Educational and Psychological Testing indicate,

If the literature [about the validity of flexible batteries of tests] is incomplete, the resulting inferences may be presented with the qualification that they are hypotheses for future verification rather than probabilistic statements regarding the likelihood of some behaviour that imply some known validity evidence.<sup>241</sup>

#### 6. Limitations and Assumptions

86. All psychological opinions will be based on some set of assumptions<sup>242</sup> and will inevitably have some limitations, given the challenges associated with routine professional practice. The National Research Council requires that these limitations and assumptions be clearly characterized in forensic science reports.<sup>243</sup> For example, assumptions about the commonness or rareness of various psychological and behavioural phenomena (also known as “base rates”) will affect a practitioner’s

<sup>238</sup> Grisso, T. (2010). <sup>242</sup> Acklin et al., 2015.

<sup>243</sup> National Research Council, 2009.

expectation of observing these phenomena in a specific case.<sup>244</sup> Similarly, assumptions about the reliability of various sources of information, the accuracy of particular methods, or the relative costs/benefits of individual rights versus community safety,<sup>245</sup> among others,<sup>246</sup> can affect how information is understood and interpreted by a practitioner and so need to be made explicit – particularly since there is no guarantee that these assumptions are accurate either generally or in a specific case.

87. Practitioners can help their audiences understand the limitations of their assessments by disclosing information about adherence to best-practice recommendations. Given the large amount of attention paid to psychological assessment evidence in legal settings,<sup>247</sup> as well as standards in the field more broadly,<sup>248</sup> practitioners should provide clear evidence of any limitations to the foundational validity and validity as applied for the methods they use. Practitioners are expected to report in simple language what the psychological assessment covers, what scores represent, the validity and precision/reliability of the scores, and how scores are intended to be

Merrell Dow* and expert testimony by clinical psychologists: Implications and recommendations for practice. *Professional Psychology: Research and Practice*, 27(5), 467–74, <https://doi.org/10.1037/0735-7028.27.5.467>; Woody, R.H. (2016). Psychological testimony and the Daubert standard. *Psychological Injury and Law*, 9(2), 91–96, <https://doi.org/10.1007/s12207-016-9255-5>.

<sup>248</sup> AERA, APA, & NCME, 2014.

used.<sup>249</sup> In so doing, they should report limitations, such as validity indices that are unknown, unknowable, or lower than ideal; if the test(s) fall(s) short of best practice expectations; or if the test(s) was/were used in an unusual way or for an unusual purpose.<sup>250</sup> The potential for bias should be acknowledged, and if steps have not been taken to mitigate those risks, this should be transparently declared.<sup>251</sup> Where steps have been taken to manage bias, they should be described to facilitate evaluation of their probable efficacy. If there is no required or formalized terminology available for forensic interpretations or conclusions, it would be beneficial for practitioners to be clear that the intent and interpretation of uncertain terms is imprecise and inconsistent to ensure their statements are not overinterpreted.<sup>252</sup>

88. Beyond these best-practice considerations, forensic psychological assessments are often limited by a range of practical considerations that may affect the data, the method, the inferences, or the opinion. For example, where the subject of inquiry is deceased or uncooperative, the quality and veracity of the available information will be weakened or questionable.<sup>253</sup> Where collateral sources like friends, family, and survivors contribute to an investigation, their motivations, availability, and cooperation is likely to materially affect the quality of the information obtained.<sup>254</sup> Archival records

are also often incomplete or unavailable and will often in some part contain the subjective impressions or interpretations of the original author.<sup>255</sup> There may also be data or results that are inconsistent or disconfirmatory. Such information should be disclosed, as it likely limits or qualifies the opinion or the approach.

89. Overall, these assumptions and limitations shape the scope and nature of the opinion and affect how the opinion should be weighed and relied upon. It is therefore vitally important for practitioners to provide explicit information about limitations and assumptions and to ensure that they are understood by the intended audience. This issue has been raised by both scholars<sup>256</sup> and Canadian authorities.<sup>257</sup>

#### 7. Alternative Views or Disagreements

90. Understanding how the opinions of a practitioner differ from or align with mainstream and best-practice ideals for the field are essential to a rigorous evaluation of the practitioner's work. Scholars and philosophers of critical thinking suggest that alternative views and disagreements need to be identified to understand and evaluate the problem at hand, the frame of reference or points of view involved, assumptions made, principles or theories used, evidence advanced, interpretations and inferences made, and implications and consequences that follow.<sup>258</sup> As such, the National

Research Council has noted that “sufficient content should be provided to allow the nonscientist reader to understand what has been done and permit informed, unbiased scrutiny of the conclusion.”<sup>259</sup> Thus, it is vital that forensic practitioners engage with and acknowledge where their views might depart from the established consensus in their field and where their views (whether they are held by a majority or not) run counter to authoritative perspectives.

91. There has been extensive discussion and debate about best practices in forensic psychological assessment for decades. In particular, where the assessment methods are unstandardized, it would be helpful to acknowledge the very real possibility of disagreement between practitioners about the validity of this approach as compared to structured and/or actuarial judgments and how that might best be understood in context.<sup>260</sup> Similarly, there have been extensive discussions about bias and bias management in forensic psychological assessment, which practitioners should acknowledge and, where no appropriate management strategies are in place, explain why.
92. Importantly, the failure to acknowledge such areas of professional disagreement should not be taken to indicate their absence<sup>261</sup> (i.e., an absence of evidence should not be taken as evidence of absence).<sup>262</sup> Instead, it has been argued that such omissions should lead those evaluating forensic scientific evidence to question the

<sup>259</sup> National Research Council, 2009, 186.

<sup>260</sup> Edmond et al., 2016a; Edmond et al., 2014.

<sup>261</sup> Cunliffe & Edmond, 2021; Edmond et al., 2017; Edmond et al., 2016b; Paul & Elder, 1990.

<sup>262</sup> For a detailed discussion of this aphorism in a forensic science context, see Thompson, W.C. & Scurich, N. (2018). When does absence of evidence constitute evidence of absence? *Forensic Science International*, 291, e18–e19, <https://doi.org/10.1016/j.forsciint.2018.08.040>.

technical proficiency of a practitioner who is not aware of relevant contemporary critical discourse.<sup>263</sup>

93. Outside of the critical scholarship already referred to, it is also worth noting that there are many more mundane types of theoretical or practical disagreement that may be relevant to evaluating a forensic psychological opinion. Psychology is generally a “broad church” discipline, and given there are few widely accepted or enforceable standard operating procedures or philosophies in psychology, it is reasonable to expect that there is a viable and alternative perspective on most if not all aspects of forensic psychological practice.<sup>264</sup> While it is clearly not practicable or desirable for practitioners to describe and address all possible alternative viewpoints, it is often the case that there are predominant “schools of thought” that occupy similar territory in the professional practice landscape.<sup>265</sup> In order to understand the quality and value of a psychological opinion, it is important to understand what the predominating alternatives are and whether they are more or less well aligned with or supported by best practice.<sup>266</sup>

#### *8. Ethical Obligations and Codes of Conduct*

94. Psychological assessments are routinely but not exclusively completed by psychologists. Clinically practicing psychologists (in contrast to research or experimental psychologists) are generally required to hold a licence to practice and will

---

<sup>263</sup> Edmond et al., 2016b.

<sup>264</sup> Geher, G. (2021). Five timeless debates in psychology. *Psychology Today*, <https://www.psychologytoday.com/us/blog/darwins-subterranean-world/202101/5-timeless-debates-in-psychology>.

<sup>265</sup> Benjamin, L.T. (2019). *A brief history of modern psychology* (3rd ed.). Wiley.

<sup>266</sup> Paul & Elder, 1990.

usually be expected - although not necessarily required - to be a member of a relevant professional organization. For example, to practice psychology in Canada, psychologists must be licensed in their jurisdiction<sup>267</sup> and will generally be expected to be a member of the Canadian Psychological Association. These licensure and membership arrangements will generally entail at least tertiary training in ethical conduct, as well as adherence to ethics codes.<sup>268</sup> If a practitioner has additional specializations like clinical or forensic psychology, they may also have additional ethical obligations under discipline-specific guidelines.<sup>269</sup>

95. Broadly, psychologists must strive to maintain integrity in relationships (e.g., avoid conflicts of interest, strive for objectivity), provide responsible caring (e.g., strive to do work that benefits people and minimizes harm), respect the dignity of persons and peoples (e.g., take precautions to safeguard individuals' rights and welfare, work to ensure all people have fair and equitable access to psychological science and practice), and be responsible to society (e.g., develop and share knowledge, contribute to the general welfare of society).<sup>270</sup> However, where a practitioner is not a registered or licensed psychologist, or a member of a relevant professional organization, there may be no formal requirement to adhere to a professional code of ethics. Indeed, scholars have recently proposed the introduction of a specific expert witness code of conduct sworn into legal proceedings to address this gap.<sup>271</sup>

96. Nevertheless, there are also distinct ethical and practical requirements for psychologists undertaking forensic rather than traditional treatment-oriented clinical assessments.<sup>272</sup> Clinical assessments are often conducted in a therapeutic context in which the person being evaluated is the client seeking treatment, and the assessment is used to inform treatment approaches.<sup>273</sup> The therapeutic alliance between the treatment provider and the patient is key, and the veracity and objectivity of information provided by the patient is of secondary importance. In these situations, the cardinal ethical principles guiding professional behaviour are rarely onerous or problematic because it is clear who the client is, that the work conducted by the psychologist should benefit the patient and minimize any potential harm, and that the patient's rights and welfare are the priority.<sup>274</sup>
97. In a forensic psychological assessment, the application of ethical principles can be challenging and contentious and has resulted in the development of special guidance for these contexts.<sup>275</sup> Forensic assessments are driven by a particular referral question, and addressing that question may not align with the assessee's individual preferences. The needs of the hiring party – the client in a forensic assessment – may

---

also recommendation 9 of the National Research Council (2009) report, which suggests that a National Institute of Forensic Science be established and that it should create a national code of ethics for all forensic disciplines while encouraging various relevant societies and organizations to incorporate the national ethics code as part of their own professional codes. Furthermore, the recommendation suggests that mechanisms of enforcement be explored, such as through a certification process for forensic scientists.

<sup>275</sup> See, for example, American Psychological Association, 2013a; Australian Psychological Society, 2014.

eclipse the preferences of the person being assessed.<sup>276</sup> In practice, this means that the approach to assessment in forensic contexts differs from traditional clinical contexts as well. For example, more scrutiny is required when gathering information in forensic contexts,<sup>277</sup> and there is a greater emphasis on collecting and considering third-party and collateral information in conjunction with self-reported data.<sup>278</sup>

98. Furthermore, to the extent that a psychological opinion is admitted or regarded as expert opinion evidence, codes of conduct and procedure rules may also apply. In general, it is unclear how often or how well forensic scientific opinions actually comply with relevant codes and procedures. However, there are examples from forensic science and forensic psychology where compliance has been inadequate.<sup>279</sup> It may therefore be valuable for the Commission to consider what, if any, codes or procedure rules apply to the psychological assessment in question and the extent to which they have been complied with. For example, the Nova Scotia Civil Procedure Rules contain requirements relevant to best-practice recommendations 1) foundational validity;<sup>280</sup>

- 2) validity as applied;<sup>281</sup> 3) bias;<sup>282</sup> 4) quality assurance;<sup>283</sup> 5) opinion expression;<sup>284</sup>  
6) limitations and assumptions;<sup>285</sup> and 7) alternative views or disagreements.<sup>286</sup>

#### IV. Evaluating a Forensic Psychological Assessment

99. In this section we pose some questions and provide some context that the

Commission may wish to consider when assessing the quality and/or value of a forensic psychological assessment, including a psychological autopsy or a behavioural profile. The questions follow from the best-practice elements discussed in previous sections and are also inspired by legal evidence admissibility rules that might apply in various jurisdictions. These questions are not exhaustive and may be somewhat overlapping but are intended to assist the Commission by making the key concepts concrete. The Commission need not use all of these questions, as we have taken an over-inclusive approach.

<sup>281</sup> “Details of the steps taken by the expert in formulating or confirming the opinion” (section 55.04(2)(a)); “the expert’s relevant qualifications” (section 55.04(3)(a)); “information on a test or experiment performed to formulate or confirm the opinion...” (section 55.04(3)(d)).

<sup>282</sup> “The expert is providing an objective opinion for the assistance of the court, event if the expert is retained by a party” (section 55.04(1)(a)); “a statement of the documents, electronic information, and other things provided to, or acquired by, the expert to prepare the opinion” (section 55.04(3)(e)).

<sup>283</sup> “The expert’s relevant qualifications” (section 55.04(3)(a)).

<sup>284</sup> “Material facts found by the expert...” (section 55.04(2)(b)); “the degree of certainty with which the expert holds the opinion” (section 55.04(2)(c)); “the qualification the expert puts on the opinion because of the need for further investigation, the expert’s deference to the expertise of others, or any other reason” (section 55.04(2)(c)).

<sup>285</sup> “The report includes everything the expert regards as relevant to the expressed opinion...” and it draws attention to anything that could reasonably lead to a different conclusion” (section 55.04(1)(c)); “a full explanation of the reasons for the opinion including the material facts assumed to be true,...., and issues outside the expertise of the expert and the name of the person the expert relies on determination of those issues” ((2)(b)).

<sup>286</sup> “The report ... draws attention to anything that could reasonably lead to a different conclusion” (section 55.04(1)(c)); “...theoretical explanations excluded, relevant theory the expert rejects ...” (section 55.04(2)(b)).

### How Was Foundational Validity Established?

100. Foundational validity relates to the “in principle” accuracy, repeatability, and reproducibility of forensic psychological assessments (see also [1. Foundational Validity](#)). Therefore, the Commission may wish to consider the following:

- Q1 What evidence does the practitioner provide that the performance of the method or process they used has been measured?
- Q2 What empirical studies show the method to be accurate, repeatable, and reproducible at levels appropriate to the intended application?
- Q3 If applicable, are the relevant empirical studies published in peer-reviewed outlets? That is, have the relevant methods been subjected to and survived peer-review processes?
- Q4 If the practitioner relied on any psychometric tests as part of their evaluation process, did the practitioner provide evidence that those tools had been subjected to the scientific peer-review process to substantiate their validity – especially for the specific intended use?
- Q5 Has the practitioner provided citations to the research or professional literature for each of the assertions they make in their report?
- Q6 How did the practitioner justify their choice of method(s)? Did they provide data about the psychometric performance of their method(s) and the combination of any methods used?
- Q7 Did the practitioner cite the validity data from test manuals, the primary research literature, and/or secondary aggregated compendiums? That is, did they summarize what is known about the performance of the tool across these sources, with up-to-date information? Information in manuals can become stale: what evidence has been provided that the practitioner did their due diligence to ensure their knowledge of the method they relied upon is scientifically up to date?
- Q8 Does the practitioner provide evidence about the validity of the methods or tools as per the Standards for Educational and Psychological Testing,<sup>287</sup> such as the evaluating reliability/precision, generalizability coefficients, standard errors of measurement, decision consistency, reliability/precision of group means, intended uses and interpretations, and/or issues regarding samples and settings used in validation?

---

<sup>287</sup> AERA, APA, & NCME, 2014.

**Q9 Does the practitioner rely on measures with generally favorable measurement properties?** <sup>288</sup>

ACCURACY

**Q10 What credible evidence does the practitioner provide that psychological assessments of the type they are completing are likely to produce objectively correct results?**

**Q11 What published empirical studies does the practitioner refer to that show psychological assessments can be highly or at least sufficiently accurate?**

**Q12 Does the practitioner provide credible evidence that there are methods or tools for conducting psychological assessments that are likely to produce objectively correct results?**

**Q13 Does the practitioner refer to published empirical studies showing particular methods or tools result in psychological assessments that are highly or at least sufficiently accurate?**

**Q14 Does the practitioner rely on a structured actuarial method with explicit decision rules, statistical integration of data, and little room for discretion to increase the accuracy of their evaluation? If not, what approach did they use, and what is their justification for doing so?**

**Q15 Was the practitioner conducting an assessment of a current mental state, where, in principle, accuracy is likely to be higher, as opposed to an assessment of a past or future mental state, where accuracy is likely to be lower?**

**Q16 If the assessment relates to a past or future mental state, what evidence does the practitioner provide about the accuracy and foundational validity of past or future mental state evaluations?**

REPEATABILITY

**Q17 Does the practitioner provide credible evidence that a practitioner, given the same information on a second occasion, would be likely to produce the same psychological assessment result (i.e., evidence of intrarater reliability)?**

**Q18 Does the practitioner refer to published empirical studies showing that the same practitioner can produce highly or at least sufficiently consistent psychological assessments?**

---

<sup>288</sup> See Neal et al., 2019 for a review paper summarizing the psychometric quality and measurement properties of 364 different psychological assessment measures known to be used by practitioners in forensic assessments. See also Carlson et al., 2021, <https://buros.org/mental-measurements-yearbook>.

- Q19** Does the practitioner describe standardized methods or tools that could in principle assist a practitioner to produce the same psychological assessment result if given the same information on a second occasion?
- Q20** Does the practitioner refer to published empirical studies showing particular methods or tools generally result in the same practitioner producing highly or at least sufficiently consistent psychological assessments?
- Q21** How objective, standardized, and structured were the methods used by the practitioner? In general, all else being equal, the more subjective, adaptable, and intuitive the method used by the practitioner, the lower the chance that it will produce the same result when repeated on another occasion.

REPRODUCIBILITY

- Q22** Does the practitioner provide credible evidence that different practitioners, given the same information, are likely to produce the same psychological assessment result (i.e., evidence of interrater reliability)?
- Q23** Does the practitioner refer to published empirical studies showing that different practitioners can produce highly or at least sufficiently consistent psychological assessments in the same case?
- Q24** Does the practitioner describe standardized methods or tools that could in principle assist different practitioners to produce the same psychological assessment result if given the same information?
- Q25** Does the practitioner refer to published empirical studies showing particular methods or tools generally result in different practitioners producing highly or at least sufficiently consistent psychological assessments?
- Q26** How objective, standardized, and structured were the methods used by the practitioner? In general, all else being equal, the more subjective, adaptable, and intuitive the method used by the practitioner, the less likely it is that two practitioners will be able to faithfully produce the same method to reach the same result.
- Q27** What evidence does the practitioner provide to justify their threshold for diagnosing or determining the forensically relevant outcome? How does this threshold align with that of other practitioners or the standard in the field?

101. In considering these issues, the Commission may find it valuable to know that scholars in the field note that there are no standardized protocols or methods for conducting

psychological autopsies.<sup>289</sup> Since standardized methods are key to the repeatability and reproducibility of a technique, this will likely have implications for the foundational validity of psychological autopsies. It is also important to note:

[T]here is simply no way to test a derived conclusion [from a psychological autopsy] in that the subject at study is deceased and consequently unavailable to provide an unequivocal statement of his or her intent to self-inflict death.<sup>290</sup>

Consequently, the accuracy of psychological autopsies is unknown and is likely unknowable.

102. Scholars are similarly unsure about the accuracy of behavioural profiling techniques.

Some suggest the accuracy of the technique is unknown,<sup>291</sup> while others suggest experienced and self-declared profilers do not outperform comparison groups.<sup>292</sup>

Some have even suggested that there is “no sound theoretical grounding and no strong empirical support” for behavioural profiling, and it “should not be used as an investigative tool because it lacks scientific support.”<sup>293</sup>

103. Ultimately, researchers have flagged a need for further empirical research

demonstrating the foundational scientific validity of both psychological autopsies<sup>294</sup> and behavioural profiling techniques.<sup>295</sup>

<sup>295</sup> Fox & Farrington, 2018; Kocsis & Palermo, 2020.

### How Was Applied Validity Established?

104. The applied validity of a technique is determined by the accuracy, repeatability, and reproducibility of a technique “in practice” and may be assessed using information about the proficiency of the practitioner and the field validity of the technique. (See also [2. Validity as Applied](#).) To do so, the Commission may wish to consider the following questions:

#### PROFICIENCY

- Q28** Does the practitioner provide credible evidence that their own psychological assessments are likely to produce objectively correct results?
- Q29** Does the practitioner provide credible evidence of participation in or the results of testing where the ground-truth was known and showing their psychological assessments are highly or at least sufficiently accurate?
- Q30** Does the practitioner provide credible evidence that their psychological assessments are materially better than laypeople (e.g., that their opinions are more accurate than novices)?
- Q31** Has the practitioner earned credentials that require demonstration of relevant proficiencies (e.g., objectively correct administration of particular psychometric tools, board certification by the American Board of Professional Psychology or other highly regarded board for which a requisite qualification is the high-quality, criterion-referenced administration of psychological assessments)?
- Q32** Does the practitioner have qualifications, certifications, authorizations, etc. that are demonstrably associated with highly or at least sufficiently accurate psychological assessment results?
- Q33** Does the practitioner operate in an environment where they receive feedback about the accuracy of their judgments? An environment or system that provides routine, systematic, and objective corrective feedback to a practitioner about the accuracy of their performance is likely to sharpen the practitioner’s proficiency.
- Q34** Does the practitioner offer any credible evidence of their proficiency, such as those detailed in the above questions, beyond simply asserting their “years of experience?” Experience is not highly related to proficiency, unless corrective feedback is routine.

FIELD VALIDITY

- Q35 What credible evidence does the practitioner provide that psychological assessments conducted under routine practice conditions typical of real-world work are likely to produce objectively correct results?
- Q36 Does the practitioner refer to published field studies that show psychological assessments are highly or at least sufficiently accurate?
- Q37 Does the practitioner provide credible evidence that there are methods or tools for completing psychological assessments under routine practice conditions typical of real-world work that produce objectively correct results?
- Q38 Did the practitioner use empirically supported methods and tools in this case that are likely to result in a highly or at least sufficiently accurate psychological assessment?
- Q39 Did the practitioner attempt to use a standardized method to define, analyze, synthesize, combine information, or make inferences in the case? Did they follow any guidance documents for how to conduct the evaluation?
- Q40 What evidence did the practitioner provide that the methods, process, or tools employed were appropriate in this case? That is, did the practitioner provide credible evidence that the approach taken was likely to result in highly or at least sufficiently accurate psychological assessment for the person and conditions in this case?
- Q41 Did the practitioner use methods and tools in this case that are likely to result in repeatable and reproducible psychological assessment? (In other words, is the approach clearly described, highly structured, and involving little discretion?)
- Q42 Did the practitioner employ standardized methods and tools or provide sufficient detail about their psychological assessment so that they or another practitioner could faithfully reproduce the assessment to reach the same result?
- Q43 Does the practitioner explain whether, and if so, why they use the same method in all similar cases, or if it varies from case to case?
- Q44 Does the practitioner provide any justification or independent support for the approach they have taken in this case as compared to the approach they have used in other cases?
- Q45 Were the conditions of the assessment similar to those in which any foundational validity studies were conducted? If not, what evidence does the practitioner provide that the particular administration

conditions of the evaluation as they differ from the controlled laboratory studies still have applied validity?

- Q46** If the practitioner used a norm-referenced psychometric tool as part of their evaluation, how well does the evaluatee fit the characteristics of the normative sample? That is, how well does any validity evidence for the tool as established for the sample upon which the tool was created fit for the particular evaluatee in this case?
- Q47** Does the practitioner provide peer-reviewed, published data about the validity of the tool for the population(s) to which the evaluatee belongs (e.g., culturally, ethnically, with regard to gender, age, reading level, language)?
- Q48** If the practitioner used a particular test or method to answer a forensic question for which the test was not explicitly designed or validated, what evidence do they provide to support their use of the test or method in such a way with regard to validity?
- Q49** If the practitioner relied on a battery of several different psychometric tests as part of their evaluation process in this case, did they provide evidence that the battery – that is, the particular combination of tools they used together – was likely to result in highly or at least sufficiently accurate psychological assessment for the person and conditions in this case?

105. Given the preceding discussion regarding the unknown and potentially unknowable accuracy of psychological profiling in general, here it may be useful for the Commission to ask whether it is possible for a practitioner to provide evidence attesting to the accuracy of their opinions at all. Furthermore, because there is no standard method for completing psychological autopsies, critical commentators in the field have noted that the application of the technique relies heavily on “the variable skills, training and sensitivities of the interviewers,” raising questions about the scientific rigour of the technique.<sup>296</sup>

---

<sup>296</sup> Snider et al., 2006, 512.

### How Did the Practitioner Manage Bias?

106. Where information is ambiguous, incomplete, and/or complex, there is a strong possibility that the judgments and decisions made by practitioners will be unintentionally influenced by subtle, powerful, and pervasive cognitive shortcuts and decision styles that undermine the objectivity of reasoning and conclusions (see also [3. Bias](#)). When evaluating the potential for bias in psychological assessments, it will be important for the Commission to consider what information was available to the practitioner, when that information was available, if that information was necessary for the task, and whether the information has the potential to alter or skew the application or interpretation of the techniques at hand. For example:

- Q50 Does the practitioner knowingly work with or for a party who may have a vested interest in a particular psychological assessment outcome?
- Q51 Does the practitioner have a conflict of interest regarding any aspect of the case that could lead them to have a vested interest in a particular outcome of the case?
- Q52 Did the practitioner engage in partisan presentation of unrepresentative, incomplete, or inaccurate evidence that could mislead finders of fact?
- Q53 Is the practitioner operating in a role or have access to information that might increase the chances of some form of cognitive bias (e.g., adversarial allegiance, hindsight bias, confirmation effects)?
- Q54 Did the practitioner complete their psychological analysis knowing the eventual outcome of the events in question?
- Q55 Was it likely that the practitioner approached the psychological assessment with a clear belief or expectation about its likely outcome?
- Q56 Does the practitioner describe the information they were provided and instructions they were given by the party commissioning their work to help understand how and when contextual information might have influenced their decision-making?
- Q57 Does the practitioner disclose what they knew, from whom, and when they knew it in the context of their psychological assessment?

- Q58** Did the practitioner document efforts to avoid biasing information, such as through blinding procedures, linear sequential unmasking or case management procedures when information with known biasing potential is present?
- Q59** Does the practitioner differentiate between “task relevant” and “task irrelevant” information and prioritize the “task relevant” information in what they seek and rely on in their decision processes and conclusions?
- Q60** Could the information available at earlier stages of the psychological assessment either knowingly or unknowingly have influenced the perception, attention, evaluation or interpretation of information considered at later stages of the psychological assessment?
- Q61** Did the practitioner rely on any standard operating procedures or practice guidelines to introduce structure, reduce discretion, and try to reduce the possibility of bias affecting their judgments?
- Q62** Did the practitioner rely on structured decision processes (e.g., actuarial or structured clinical judgment methods rather than unstructured methods) to reduce discretion and try to reduce the possibility of bias affecting their judgments?
- Q63** Does the practitioner employ any other methods or procedures for managing or mitigating cognitive bias in their psychological assessment, such as seeking independent peer review, stating rival hypotheses and counterfactuals, or using archival self-monitoring?

107. In considering the potential for and management of biasing effects in the context of psychological autopsies and behavioural profiling, the Commission may wish to consider that both psychological autopsies and behavioural profiling assessments rely heavily on collateral and contextual information, including sources of information (e.g., close friends and family members) that are likely to be biased – either consciously or unconsciously.<sup>297</sup> There are also a range of stakeholders and third parties who may have a vested interest in the outcome of these assessments (e.g., survivors and insurance companies).<sup>298</sup> While much of this information is likely to be relevant to the

---

<sup>297</sup> Snider et al., 2006.

<sup>298</sup> Snider et al., 2006.

task at hand, some of it will not be, and the potential for these types of information to bias the eventual outcome is significant.

108. For example, experimental evidence suggests that forensic mental health evaluators completing unstructured violence risk assessments who were aware of the outcome of a hypothetical violent incident (suicide or homicide) provide statistically higher estimates of violence risk than those who were not aware of the outcome.<sup>299</sup> This is an example of a hindsight bias.<sup>300</sup> However, it is worth noting that these differences in risk estimates did not translate into differences in beliefs about the legal question of negligence reached by psychologists in the scenario. This same study also showed evidence of confirmation bias among the evaluators, whereby those given event outcome information were more likely to identify risk factors (i.e., concerns) to support their evaluations, while those not given outcome information were more likely to identify protective factors (i.e., strengths) to support their judgments. This is a type of confirmation bias. Ultimately, the authors of this study concluded that “the evaluation of and decision-making process regarding the initial event, in hindsight, may not meet the objective standard to which expert witnesses aspire.”<sup>301</sup>

---

<sup>299</sup> Beltrani et al., 2018.

<sup>300</sup> See also experimental evidence of hindsight bias in psychiatrists' assessment of the risk of suicide or violence posed by hypothetical patients at time of release from care. Practitioners with outcome knowledge (the hindsight group) offered significantly higher risk ratings than those not provided outcome information (control group), reflecting hindsight bias in their judgments. LeBourgeois, H.W., Pinals, D.A., Williams, V., & Appelbaum, P.S. (2007). Hindsight bias among psychiatrists. *Journal of the American Academy of Psychiatry and the Law*, 35(1), 67–73.

<sup>301</sup> Beltrani et al., 2018, 292.

### How Did the Practitioner Approach Quality Assurance?

109. Where quality assurance standards and practices are in place to ensure the requirements of a service will be met, room for error is greatly reduced (see also [4. Quality Assurance](#)). As noted, there are not yet national or international quality assurance standards for forensic psychology. However, there are relevant quality assurance features in place, such as licensing regulations, particular credentialing pathways, and ethics codes and practice guidelines that inform best practice in the field. To evaluate quality assurance, the Commission may consider questions like the following:

- Q64** Does the practitioner identify and follow administrative or procedural standards to ensure the quality of their psychological assessment? Do they report using best practices and identify them as such?
- Q65** Does the practitioner cite and rely on any authoritative practice guidelines (e.g., those published by the Canadian Psychological Association, Australian Psychological Society, or American Psychological Association with regard to psychological assessment practice in general and forensic assessment practice in particular) to try to improve the quality of their assessments?
- Q66** Does the practitioner report systematic monitoring or measurement of their performance in psychological assessment, alongside a comparison against a target goal, with an associated feedback loop to reduce error in their work?
- Q67** Does the practitioner provide evidence that they are appropriately licensed, credentialed, and in good standing in their profession?
- Q68** Does the practitioner identify and follow ethical rules, codes of conduct, and legal procedural and evidence admissibility rules that offer guidance and suggestions for how psychologists should behave in their forensic psychological assessment work?
- Q69** Did the practitioner's behaviours in this case meet at least the minimum standards of practice in the field, as laid out in and potentially enforceable under ethics codes?
- Q70** Does the practitioner offer evidence of credentialing (e.g., board certification by the American Board of Forensic Psychology or the American Board of Police & Public Safety Psychology) or certification

by law or policy (e.g., state or jurisdictional models) in forensic psychological assessment? If so, did these certification processes require proficiency testing for initial credentialing, and do they require ongoing evidence of proficiency to maintain the credential?

**Q71** Does the practitioner encourage quality assurance assessment of their own work, such as seeking peer review of their evaluation, report, or testimony, or by carefully detailing the limitations and assumptions as well as alternative views and disagreements associated with their assessment?

**Q72** Does the practitioner rely on the Standards for Educational and Psychological Testing, both for the individual tools themselves and also for an overall combination of methods used?

110. As noted, psychological autopsies and behavioural profiling depart somewhat from typical forensic psychological assessment practice. As such, the quality assurance-relevant elements we have outlined in this report like licensing regulations for psychologists and best-practice standards for forensic psychology may not clearly apply for practitioners offering psychological autopsy and behavioural profiling services. Therefore, quality assurance is perhaps less well established for these types of assessments as compared to other more routine types of forensic psychological assessments.

#### **How Did the Practitioner Communicate Their Opinions?**

111. Concerns about the standardization, meaning, and certainty of terminology and conclusions used by forensic practitioners make it important for the Commission to critically consider what a practitioner has said, why the practitioner has said it that way, what the practitioner meant, and whether the practitioner communicated an appropriate degree of uncertainty about their conclusions (see also [5. Opinion Expression](#)). For example:

- Q73** Does the practitioner describe using or refer to a standardized and validated reporting scale or generally accepted conventions for reporting their results, opinions, and conclusions?
- Q74** Have these conventions or methods been empirically tested to ensure they communicate with the audience as intended?
- Q75** Does the practitioner limit the use of jargon and provide glossaries or definitions of the terms they use to express their results, opinions, and conclusions?
- Q76** Does the practitioner explain why they chose particular terminology to express their results, opinions, and conclusions?
- Q77** If not limited by copyright concerns regarding particular tools, does the practitioner reproduce the reporting scales/terminology in their report to reduce the potential for misinterpretation of psychological findings?
- Q78** Rather than definitive forms of expression (e.g., the person of interest did/not die by suicide; will/not commit a serious violent offence), did the practitioners' results, opinion, and conclusions contain verbal or numerical expressions of uncertainty?
- Q79** Are the practitioners' conclusions modest and qualified or do they imply a level of certainty that is not commensurate with scientific methods in general or forensic psychological assessments in particular?
- Q80** If the practitioner relied on an untested or unvalidated battery of several different psychometric tests as part of their evaluation process in this case, did they appropriately acknowledge or disclose that their results, opinions, and conclusions from the battery are hypotheses for future verification rather than probabilistic statements that imply known validity?

11.2. There is a rich literature examining the communication of actuarial risk assessments which – consistent with the broader literature on the comprehension of forensic<sup>302</sup> and

<sup>302</sup> Eldridge, H. (2019). Juror comprehension of forensic expert testimony: A literature review and gap analysis. *Forensic Science International: Synergy*, 1, 24–34, <https://doi.org/10.1016/j.fsisy.2019.03.001>; Martire, K.A. (2018). Clear communication through clear purpose: Understanding statistical statements made by forensic scientists. *Australian Journal of Forensic Sciences*, 50(6), 619–27, <https://doi.org/10.1080/00450618.2018.1439101>; Martire, K.A. & Edmond, G. (2020). How well do lay people comprehend statistical statements from forensic scientists? In D. Banks, K. Kafadar, & D. Kaye (eds.), *Handbook of forensic statistics* (pp. 201–24). Chapman and Hall/CRC; Martire, K.A., Kemp, R.I., & Newell, B.R. (2013). The psychology of interpreting expert evaluative opinions. *Australian Journal of Forensic Sciences*, 45(3), 305–14, <https://doi.org/10.1080/00450618.2013.784361>.

other statistical statements<sup>303</sup> – shows that these forms of expression do not have a universally accepted meaning and that further research is required to optimize and standardize opinion expression.<sup>304</sup> However, the literature we have engaged with relating to psychological autopsies and behavioural profiling does not appear to directly address the communication issues we have identified here.

113. Based on our reading, it is not clear how the results and opinions derived from these techniques are usually or should optimally be communicated. It is not clear if there is proscribed terminology or forms of expression for use in the field or if there are statistical statements recommended for communicating the likelihood of error and uncertainty associated with the techniques. This suggests the methods of opinion expression in the psychological autopsy or behavioural profile may be worthy of particular attention.
114. At the least, since both psychological autopsies and behavioural profiling involve substantial inferential leaps from observed behaviour to either previous or current mental states, the Commission should reasonably expect that a rigorous assessment

---

<sup>303</sup> Andreadis, K., Chan, E., Park, M., Benda, N.C., Sharma, M.M., Demetres, M., Delgado, D., Sigworth, E., Chen, Q., Liu, A., Grossman, L., Sharko, M., Xikmund-Fisher, B.J., & Ancker, J.S. (2021). Imprecision and preferences in interpretation of verbal probabilities in health: A systematic review. *Journal of General Internal Medicine*, 36(12), 3820–29. <https://doi.org/10.1007/s11606-021-07050-7>; Van der Bles, A.M., Van Der Linden, S., Freeman, A.L., Mitchell, J., Galvao, A.B., Zaval, L., & Spiegelhalter, D.J. <sup>304</sup> Batastini, A.B., Hoeffner, C.E., Vitacco, M.J., Morgan, R.D., Coaker, L.C., & Lester, M.E. (2019). Does the format of the message affect what is heard? A two-part study on the communication of violence risk assessment data. *Journal of Forensic Psychology Research and Practice*, 19(1), 44–71. <https://doi.org/10.1080/24732850.2018.1538474>; Hilton, N.Z., Scurich, N., & Helmus, L.M. (2015). Communicating the risk of violent and offending behaviour: Review and introduction to this special issue. *Behavioural Sciences & the Law*, 33(1), 1–18. <https://doi.org/10.1002/bsl.2160>; Hogan, N.R. (2021). Critical considerations in the development and interpretation of common risk language. *Psychiatry, Psychology and Law*, 28(2), 218–34. <https://doi.org/10.1080/13218719.2020.1767719>.

would include some acknowledgement of uncertainty surrounding the conclusions and opinions offered. This expectation of a conservative approach and modest conclusions is only reinforced by the type of inferences being made (e.g., retrospectively about a deceased person), the likely limitations of information sources relied upon (e.g., the possibility of vested interests from involved and affected parties), the absence of standardized procedures or validated actuarial tools, and the reliance on extensive and detailed collateral information.

#### **What Limitations and Assumptions Were Disclosed?**

115. A clear characterization of the limits and assumptions of a psychological assessment is vital for determining its quality and value (see also [6. Limitations and Assumptions](#)). To explore this, the Commission may wish to consider questions that touch on both the sufficiency of foundational and applied validity of the techniques employed, as well as case-specific limitations and more general assumptions. For example:

- Q81 Does the practitioner acknowledge any weaknesses in relation to any of the best practices described here?**
- Q82 Does the practitioner disclose any limitations of their methods, results, opinions, or conclusions?**
- Q83 Does the practitioner disclose any assumptions they have relied on when undertaking their work?**
- Q84 Does the practitioner provide information about the limitations of the foundational validity of the methods they used in the case, such as validity or precision/reliability indices that are unknown, unknowable, or lower than ideal?**
- Q85 Does the practitioner provide information about the limitations to the validity as applied for the methods they used in the case, such as any relevant limitations to their own proficiency, limitations to the field validity of the methods used in cases like the instant case, and whether the methods were used in an unusual way or for an unusual purpose?**

- Q86** Does the practitioner provide any information about the likelihood, cause, or magnitude of disagreement between practitioners who provide the same types of assessments?
- Q87** Does the practitioner provide any information about the likelihood, cause, or magnitude of disagreement across repeated applications of the same techniques?
- Q88** Does the practitioner disclose any deviations from standard operating procedures or documented and validated methods?
- Q89** Has the practitioner considered the implications of any deviations from best practice for the validity of their approach and conclusions?
- Q90** Does the practitioner acknowledge the potential for bias and transparently describe steps they took to mitigate those risks?
- Q91** Does the practitioner provide information to understand any limitations regarding the intent, imprecision, and interpretation of uncertain terms?
- Q92** Does the practitioner describe and account for any limitations to the quality of the data they have relied on in their assessment?
- Q93** Does the practitioner disclose any data that is inconsistent with or disconfirming of their opinions or explicitly state that there was no such data?
- Q94** Does the practitioner describe any case-specific factors that may decrease the quality or value of their assessment in this case or explicitly state that no such factors were present?
- Q95** If the subject of inquiry is deceased or uncooperative, did the practitioner describe the likely impact on the quality and veracity of the information available to them in conducting the assessment?
- Q96** Where collateral sources like friends, family, survivors, and archival records contribute to a psychological assessment, are the limitations associated with the quality of that information declared?

116. A number of limitations and assumptions are likely to be relevant to psychological autopsies and behavioural profiling assessments. As a starting point, there are likely to be relevant disclosures regarding each of the best practices identified in this report, as discussed in each section. Specifically, given that no psychological assessment technique is error-free or has been perfectly optimized, a robust psychological autopsy

or behavioural profile is likely to have weaknesses in Best practices: 1) foundational validity, 2) validity as applied, 3) bias, 4) quality assurance, 5) opinion expression, 6) (case-specific) limitations and assumptions, and 7) alternative views or disagreements. It is also possible that there may be limitations with regards to 8) ethical obligations and codes of conduct.

### How Were Alternative Views and Disagreements Managed?

117. Some practitioners may be operating on the fringe of best or standard practice. This is a matter that should be transparently disclosed in a psychological assessment (see also [7. Alternative Views or Disagreements](#)), although the practitioner may not be aware that they are operating on the fringe. The Commission may wish to consider the following questions to explore this issue:

- Q97 Does the practitioner refer to any critical scholarship or authoritative commentary relating to forensic psychological assessments, psychological autopsies, or behavioural profiling?**
- Q98 Does the practitioner consider the implications of relevant critical scholarship for the quality and value of their own psychological assessment?**
- Q99 Where applicable, does the practitioner engage with and acknowledge where their views might depart from the established consensus in their field and where their views (whether held by a majority or not) run counter to authoritative prescriptions?**
- Q100 Does the practitioner acknowledge that different practitioners may use different methods or reach different conclusions given the same information?**
- Q101 If relevant, does the practitioner acknowledge that there are various “schools of thought” that occupy similar territory in the professional practice landscape and identify the viewpoint from which they are operating while also identifying (an) other viewpoint that other professionals might rely upon in their assessments?**
- Q102 Does the practitioner explain why there may be differences between practitioners when completing the same psychological assessments**

and what the implications of those differences are for the quality and value of their own psychological assessment?

**Q103** Does the practitioner offer rival hypotheses or counterfactuals that might arise from alternative professional approaches to interpreting the same body of assessment evidence in a particular case?

**Q104** If the practitioner used an unstandardized assessment approach, do they acknowledge the very real possibility of disagreement between practitioners about the validity of this approach as compared to structured and/or actuarial judgments?

118. When considering the potential for alternative perspectives and disagreements

relating to psychological autopsies and behavioural profiling, we note that there is critical scholarship in both of these areas.<sup>305</sup> For example, regarding behavioural profiling, scholars have commented that

profiles of target-violence perpetrators would be too diffuse to have any real discriminatory value and too insensitive to effectively identify potential attackers who might fall outside the boundaries of the "profile."<sup>306</sup>

Of psychological autopsies:

[T]here is simply no way to test a derived conclusion [from a psychological autopsy] in that the subject at study is deceased and consequently unavailable to provide an unequivocal statement of his or her intent to self-inflict death.<sup>307</sup>

119. While it is outside our expertise to comment on the authority, representativeness, or timeliness of these criticisms, we note that the issues being raised relate to the best-

<sup>305</sup> Conner et al., 2021; Fox & Farrington, 2018; Hjelmeland et al., 2012; Hjelmeland, H. & Knizek, B.L. (2017). Suicide and mental disorders: A discourse of politics, power, and vested interests. *Death Studies*, 41(8), 481–92, <https://doi.org/10.1080/07481187.2017.1332905>; Pirakis, J., Nicholas, A., & Gunnell, D. (2020). The case for case-control studies in the field of suicide prevention. *Epidemiology and Psychiatric Sciences*, 29, E62, <https://doi.org/10.1017/S2045796019000581>; Pouliot, L. & De Leo, D. (2006). Critical issues in psychological autopsy studies. *Suicide and Life-Threatening Behaviour*, 36(5), 491–510, <https://doi.org/10.1521/suli.2006.36.5.491>; Pridmore, S. (2015). Mental disorder and suicide: A faulty connection. *Australian and New Zealand Journal of Psychiatry*, 49(1), 18–20, <https://doi.org/10.1177/0004867414548904>; Ribeiro & de Matos Soeiro, 2021; Snook et al., 2008; Snook et al., 2007; Vettor, S., Woodhams, J., & Beech, A.R. (2013). Offender profiling: A review and critique of the approaches and major assumptions. *Journal of Current Issues in Crime, Law & Law Enforcement*, 6(4), 354–87, <https://doi.org/10.13140/RG.2.1.1672.6168>.

<sup>306</sup> Harris, A.J. & Lurigio, A.J. (2012). Threat assessment and law enforcement practice. *Journal of Police Crisis Negotiations*, 12(1), 51–68, <https://doi.org/10.1080/15332586.2012.645375>, 54.

<sup>307</sup> Snider et al., 2006, 513.

practice considerations that are identified in this report and have been endorsed by peak mainstream scientific and psychological sources. This suggests that there are likely to be credible criticisms of psychological autopsies and behavioural profiles that should be acknowledged and engaged with by practitioners undertaking these assessments.

120. Furthermore, where a practitioner is not scientifically trained, they may not be conversant with the scientific literature, best practices, and alternative views or disagreements described in this report.<sup>308</sup> Yet it does not mean that these perspectives do not exist, and ignorance of these issues may reflect poorly on the quality of the assessment. The technical proficiency of a practitioner who is not aware of relevant contemporary critical discourses should be examined carefully.

#### **How Were Ethical Obligations and Codes of Conduct Addressed?**

121. Ethical obligations, codes of conduct, and procedure rules apply to the provision of psychological assessments (see also [8. Ethical Obligations and Codes of Conduct](#)). The Commission can explore this by considering the following questions:

**Q105 Does the practitioner describe and hold appropriate licences, accreditation, and/or authorization as necessary to complete the work described?**

**Q106 Does the practitioner describe and maintain memberships of professional organizations and societies that govern the ethical conduct of the work described?**

**Q107 Does the practitioner's work comply with relevant ethical, professional, and licensure requirements?**

---

<sup>308</sup> Edmond et al., 2016b.

---

**Q108 Do procedural rules apply to the psychological assessments in this case? Does the practitioner's work comply with those rules?**

122. As already discussed, practitioners who provide psychological autopsies and behavioural profiles may have diverse professional experience. Many though not all practitioners in these areas will be psychologists. Psychologists generally need a licence to undertake their work; however, there are instances where unlicensed psychologists can provide legally relevant opinions in the form of framework evidence (i.e., informing courts about general psychological knowledge that bears on a legal dispute without forming a specific opinion about the case at hand).<sup>309</sup>
123. Where a practitioner is a member of a professional organization (be it psychological or otherwise), these organizations usually have codes of ethics that their members should adhere to. But once again, it is possible that practitioners offering psychological autopsy or behavioural profiling assessments may do so without holding professional membership and so may not have any formal ethical obligations. For example, people who have completed tertiary studies in psychology do not always seek formal licensure as a psychologist. These practitioners may pursue careers in criminology or law enforcement, applying their psychological knowledge in their roles without having to adhere to the licensing or ethical obligations. Thus, at present, the ethical and licensing requirements for practitioners providing psychological autopsies or behavioural profiles do not appear to be determined by the service being provided in

any given case. Rather, they seem to be determined by the training of the individual practitioner, the titles and memberships they hold, and the resultant commitments they have undertaken.

## V. Evaluating Our Opinion

124. Our report does not offer a psychological opinion of the type considered throughout this report. Even so, many of the principles of best practice we have described also apply to the task we have undertaken for the Commission in providing what is referred to as framework evidence.<sup>310</sup> Framework evidence informs courts about general psychological knowledge that bears on a legal dispute in the abstract rather than providing a specific, individualized opinion about a person or scenario of interest. To assist the Commission in evaluating our opinion, we provide the following information:

### Sources Informing Our Opinion

125. Our opinion in Part 1 was informed by scholarly literature and reports of mainstream scientific organizations as cited throughout this document (see also VI. Works Cited). Most of these resources can be accessed using the bibliographic information, Digital Object Identifiers (DOI), and hyperlinks provided. Other materials are available to the Commission upon request.

126. Our opinion was also informed by the terms of our engagement with the Commission. Based on preliminary conversations, the Contractor Responsibilities (i.e., “Contractors”

---

<sup>310</sup> Faigman, D.L., Monahan, J., & Slobogin, C. (2014). Group to individual (G2i) inference in scientific expert testimony. *University of Chicago Law Review*, 417–80; Monahan et al., 2009; Walker & Monahan, 1987.

Kristy Martire and Tess Neal) as issued on 30 November 2021 by the Commission

were as follows:

In the initial phase of their work, the Contractors will produce a report that:

1. defines the field of “psychological assessment” or “risk assessment” that may be used by law enforcement agencies and courts;
2. reviews the scientific evidence basis for the techniques used by psychological evaluators;
3. sets out best practices for and limitations of psychological assessment and risk assessment, drawing upon the principles of evidence-based medicine and forensics where it would be helpful to do so, in a manner that is generalizable to the evaluation of psychological autopsy processes and reporting.

The Contractors will provide an outline of this initial report by 10 December 2021 and a draft of this report by 15 January 2022.

Upon receipt of the initial report, the Director of Research and Policy will supply the Contractors with:

1. a copy of the “psychological autopsy” produced in relation to the perpetrator of the mass casualty of 18 and 19 April 2020 and associated documents; and
2. comments on the initial report, including copy-editing and feedback with respect to the scope of the analysis supplied within the initial report.

The Contractors will apply the principles set out in the draft report to the documents provided by the Commission and will produce an additional portion of the report that explains any new issues arising from these documents, including an evaluation of the extent to which the Psychological Autopsy reflects evidence-based techniques and reflects best practices set out in the initial draft report.

127. The Commission reviewed a draft report outline and provided the following to refine

the scope of our report on 1 December 2021:

1. If and to the extent that it is possible for you to do so, could you please include some discussion or working definition of “psychological assessment” and “risk assessment” and how, in your understanding, these practices relate to the lay/police terms “profiling” and “behavioural analysis.” (To be clear, we appreciate that the latter is outwith your expertise and will not form the focus of your report, but if you are able to share your understanding of the relationship between psychological/risk assessments and profiling, that would be of help to the Commissioners.)
2. Relatedly, if the term “psychological autopsy” has a received understanding in forensic psychology, please explain that received understanding and how the evidence-based principles you set out apply to a psychological autopsy.

3. To the extent that you can do so, could you please attend to the implications for evidence-based forensic psychology of the fact that the subject of a psychological assessment or risk assessment has died. How would this fact affect the accuracy and integrity of psychological assessments or attempts to draw on the principles of forensic psychology to explain that person's actions/behaviour/motives?

### Evaluating the Validity of Our Approach

128. As with psychological assessments, there are two types of validity to consider when evaluating our framework opinion: foundational validity and validity as applied. The foundational validity of our opinion relates to whether or not there is credible evidence that approaches like ours *in principle* result in accurate, repeatable, and reproducible opinions of the type we have provided. The validity of our opinion as applied relates to whether or not there is credible evidence that our approach *in this case* is likely to be accurate, repeatable, and reproducible.

129. When considering the accuracy of framework evidence, both in principle and in this case, it is important to note that there is arguably no “ground truth” against which to determine accuracy. Specifically, there is no single correct way to synthesize relevant scholarship. Rather, it is likely that several different perspectives are supportable depending on the philosophy, values, and assessments of the evaluator. Given this, the Commission may benefit from considering the quality of the reasoning provided to underpin our opinion rather than its objective accuracy. For example, whether the basis for our opinion is logically sound, internally consistent, and well supported by credible evidence, while also accounting for and disclosing limitations (see also [Limitations and Assumptions](#)) and any disconfirmatory or conflicting evidence (see also [Alternative Views and Disagreements](#)).

130. When considering the repeatability and reproducibility of our opinion, both in principle and in this case, the Commission will need to consider our methodology and whether we or others could reproduce it to reach the same outcome. As also described in [Limitations and Assumptions](#), our approach in forming our opinion was subjective. We provided an opinion based on extended engagement with relevant issues and scholarship. Our opinion reflects our values and beliefs and is the result of our own reading, critical evaluation, and published commentary. Given this, the Commission should be aware that subjective processes like the one we have used are generally expected to have lower repeatability and reproducibility than systematic, formalized approaches.<sup>311</sup> Even so, we suggest that opinions formed over years of critical engagement with a particular topic are likely to be relatively stable (repeatable), and although the exact process may be difficult to reproduce, we suggest that it is also likely that another person, reading the sources we cite here, would form a similar opinion (reproducible). The fact that the best principles we identify here have also been identified by a number of scholars and authoritative scientific institutions further supports the reproducibility of our opinion.

### Our Proficiency

131. Kristy Martire and Tess Neal both hold PhDs in Psychology, are formally trained in forensic psychology, and are registered/licensed psychologists. Specifically, Kristy

---

<sup>311</sup> A systematic review is a formalized process that uses explicit, systematic, and reproducible methods to identify, select, and critically appraise relevant scholarship. For example, see Page, M.J., Moher, D., Bossuyt, P.M., Boutron, I., Hoffmann, T.C., Mulrow, C.D., Shamseer, L., Tetzlaff, J.M., Akl, E.A., Brennan, S.E., Chou, R., Glanville, J., Grimshaw, J.M., Hróbjartsson, A., Lalu, M.M., Li, T., Loder, E.W., Mayo-Wilson, E., McDonald, S., . . . McKenzie, J.E. (2021). PRISMA 2020 explanation and elaboration: Updated guidance and exemplars for reporting systematic reviews. *BMJ*, 372, n160, <https://doi.org/10.1136/bmj.n160>.

Martire holds a Master of Psychology (Forensic) and a PhD in Psychology (Forensic) from the University of New South Wales (UNSW), Sydney. Tess Neal earned her PhD in Clinical Psychology (Psychology-Law Concentration) from the University of Alabama and completed a Forensic Psychology postdoctoral residency at the University of Massachusetts Medical School (UMass Med School). They are both employed as academic faculty at large research universities.

132. Kristy Martire holds the endorsed title Forensic Psychologist.<sup>312</sup> She is registered with the Psychology Board of Australia (Registration: PSY0001048364),<sup>313</sup> is a member of the Australian Psychological Society and College of Forensic Psychologists,<sup>314</sup> and is a member of the Australian Academy of Forensic Sciences.<sup>315</sup>

133. Tess Neal is licensed as a psychologist in the states of Arizona (License #4630) and Nebraska (License #844, voluntary inactive status). She is a fellow of the American Psychological Association (APA)<sup>316</sup> and the American Psychology-Law Society (Division 41 of the APA),<sup>317</sup> and is a member of the American Academy of Forensic Sciences.<sup>318</sup> She was also trained as a Designated Forensic Examiner (Psychology) in Massachusetts.

134. PhD training in Psychology develops the following skills relevant to the production of this report: academic writing and presentation skills, critical thinking and analysis

<sup>312</sup> See <https://www.psychologyboard.gov.au/endorsement.aspx>.

<sup>313</sup> See <https://www.psychologyboard.gov.au/>.

<sup>314</sup> See <https://groups.psychology.org.au/cfp/>.

<sup>318</sup> See <https://www.aafs.org/>.

---

skills, abstract reasoning skills, knowledge of and experience with basic statistical analysis techniques, and familiarity and experience with psychological research methods. These skills are tested largely via the PhD examination process – which involves comprehensive qualifying evaluations (in the United States) and completion of a dissertation (in both Australia and the United States) – and via peer-reviewed publications throughout one’s career. However, these processes of evaluation are not without limitation, and concerns exist surrounding the rigour of peer review as an indicator of scholarship quality.<sup>319</sup>

135. The formal Forensic Psychology education that Drs. Martire and Neal completed (i.e., the Master of Psychology [Forensic] qualification at UNSW, Forensic Psychology postdoctoral residency at the UMass Med School) focused on the integration of clinical, research, and legal skills and provided training in the following areas relevant to the production of this report: psychological assessment, forensic psychology interventions and applications, law for psychologists, and professional and ethical forensic psychology practice.
136. Kristy Martire is employed as an Associate Professor in Psychology at UNSW. Tess Neal is employed as an Associate Professor in Psychology at Arizona State University. They regularly publish research and commentary in peer-reviewed scholarly journals on topics relating to the acquisition, communication, and assessment of expertise in forensic science and forensic psychology. Both professors also teach: Dr. Martire teaches postgraduate Master of Psychology (Forensic) trainees, and both Drs. Martire

<sup>319</sup> Smith, R. (2006). Peer review: A flawed process at the heart of science and journals. *Journal of the Royal Society of Medicine*, 99(4), 178–82, <https://doi.org/10.1177/014107680609900414>.

and Neal regularly offer professional workshops and trainings for students and forensic practitioners about the values and challenges associated with forensic psychology practice, as well as critical, scientific, and ethical thinking skills and research study design. As such, Drs. Martire and Neal have read widely, critically considered, and publicly commented on a range of issues that apply to the production of psychological opinions in forensic contexts.

### **Bias Management, Quality Assurance, and Opinion Expression**

137. We were engaged by the Commission to comment on rigorous forensic psychological assessment practices. During the contracting/scoping phase of our engagement, the Commission noted the existence of and their interest in evaluating the rigour of a specific psychological autopsy (henceforth “the psychological autopsy”). However, as suggested in our preceding discussions, it is possible – perhaps even likely – that: a) knowing that the Commission has an interest in evaluating the rigour of the psychological autopsy and b) having read the psychological autopsy in question would affect our opinions about what constitutes a rigorous forensic psychological assessment.

138. Therefore, we asked the Commission to withhold the psychological autopsy until we completed Part 1 of our report describing abstract principles and best-practice recommendations for rigorous forensic psychological assessments. The Commission agreed to provide us with case-specific documents, including the psychological autopsy, only after receipt of Part 1. Part 2 of our report will then serve as an addendum to Part 1 and will be completed after reviewing case-specific documents.

This process for managing bias is called *sequential unmasking* and is considered an appropriate strategy for reducing bias risk<sup>320</sup> and improving quality.

139. To further protect against bias, we also asked the Commission not to disclose any specific information about the events of April 2020 or the people/stakeholders involved before preparing Part 1 of our report. We also refrained from obtaining details about the events ourselves. At the time of writing Part 1 of this report, we had a general idea of the nature, seriousness, and scope of the events the Commission is considering, but we had few specific details about what transpired to trigger this inquiry or the Commission's interest in the psychological autopsy.

140. In addition, we relied on the principles of open science in the preparation of this report.<sup>321</sup> Open science aims to increase the openness, integrity, and reproducibility of science by making research, data, and their dissemination available to all. Transparent science enables critical review, verification, and ultimately improved quality of work.<sup>322</sup> These ideals are particularly important in legal and forensic work, where law and policy that affect people's lives are involved.<sup>323</sup>

141. Our approach to open science in this report involved extensive referencing of our opinions and the sources relied upon, citation using digital object identifiers (DOI) where available, explicit disclosure of relevant alternative views and disagreements,

<sup>323</sup> Chin et al., 2019.

and sharing information about the terms of reference, project timelines, and communication in this report and with the Commission on the Open Science Framework,<sup>324</sup> to be made publicly available at the Commissions' discretion.

142. Finally, we took care to attend closely to the expression of our opinion. We took steps to separate Parts 1 and 2 of this report and provided a glossary to define all terms with the potential for jargon-related confusion. Specifically, Part 1 lays out what we see as best practices for rigorous forensic psychological assessment practices in the abstract. We described these, with justification, and then opined that we see these as best practices – but we did not link this opinion to the specifics of the case the Commission is considering. This was intentional, with a split opinion across Parts 1 and 2 of our process representing our approach to improving quality and reducing bias in our work. Furthermore, when we complete Part 2 of this report, we will avoid overly conclusive language and will again carefully define our terms in a glossary, and so forth.

### Limitations and Assumptions

143. In evaluating our report, it is important for the Commission to be aware of the following limitations and assumptions.

144. We approached the topic of “rigorous forensic psychological assessment” by drawing on our knowledge relating to scientific expert opinion evidence (i.e., of the type admitted in legal proceedings). Some of the issues discussed from this perspective may be more or less acute in other contexts or scenarios. Even so, we believe the best-

<sup>324</sup> Available at [https://osf.io/brz2c/?view\\_only=7ffe2fa7325144fd8cf40e6f23b35302](https://osf.io/brz2c/?view_only=7ffe2fa7325144fd8cf40e6f23b35302).

---

practice considerations discussed here are relevant to assessing the quality and value of any psychological assessment.

145. We have not undertaken a formal systematic review of the published literature to prepare this report, which is generally recommended over non-systematic reviews of the type we have conducted.<sup>325</sup> Our survey of and engagement with the literature has been informed by our own reading and knowledge developed over the years of our engagement with the topics discussed here. Our review is therefore not exhaustive, and it is possible that contradictory views and alternative opinions will have been missed in our summary and synthesis. It is also possible that we have missed additional examples and sources supporting the views presented here. The Commission should note that this approach also makes it difficult for other scholars to faithfully reproduce our approach. Furthermore, given that there is arguably no agreed and objectively accurate outcome from a systematic review, the accuracy of our approach is unknown both in principle and in practice.

146. We do not claim expertise in the specific techniques of psychological autopsy or behavioural profiling. We describe best-practice principles for forensic sciences, including forensic psychological assessments, as described by authoritative mainstream scientific institutions and psychologists who are attentive to these issues. We also draw on a limited engagement with critical scholarship relating to psychological autopsies and behavioural profiling at the request of the Commission. There are likely to be specific aspects of psychological autopsy and behavioural

---

<sup>325</sup> Page et al., 2021.

profiling techniques and their associated literatures that require careful consideration and perhaps additional or modified best-practice recommendations and analysis from those who claim expertise in these particular assessments. But to the extent that psychological profiling and the psychological autopsy meet the definition of a forensic psychological assessment, we contend these techniques should also adhere to the principles and best practices of evidence-based psychological science described in this report.

147. We are also limited in what we know about the subject of the Commission's inquiries.

This limits the scope of our review and opinions. In particular, we did not seek access to background information that may have been referred to or relied upon in the psychological autopsy, as we wrote this report about best practices in the abstract. In Part 2, when we apply the best practices laid out in this report to the specific evaluation in question, we will be unable to make any direct or indirect comment on the factual accuracy of that assessment (i.e., its "correctness"). We will be able to comment only on the extent to which the psychological autopsy includes information relating to the best practices we have described in Part 1. We will leave it to the Commission to make qualitative judgments about the sufficiency and or accuracy of the psychological autopsy in question.

#### **Alternative Views and Disagreements**

148. Our opinion is well informed and is extensively supported by evidence from authoritative sources. Yet it remains indicative of a particular perspective on forensic sciences, forensic psychology, and psychological assessments and should be taken by

the Commission as representing that perspective. We do not propose that our views represent the only or even the predominant perspective. More specifically, our views favour a scientific and skeptical approach, with awareness that alongside robust scientific practices,<sup>326</sup> there are some pseudoscientific practices in forensic science and forensic psychology that “display the veneer of science but do not ‘play by its rules’.”<sup>327</sup> Many practitioners are not aware of and do not engage with the considerations discussed here, and though we would argue this constitutes a gap in professional knowledge that has the potential to diminish the quality and value of their work, there are practitioners who do not adopt or see the need for the recommended practices described here. Even so, the professional practice of those with a different perspective to ours may also be characterized as “acceptable,”<sup>328</sup> given the standards and guidelines currently operating in the field.

149. Some may also dispute our characterization of structured/actuarial judgment, structured clinical judgment, and unstructured clinical judgment methods as descending in order of accuracy.<sup>329</sup> Advocates for the structured clinical judgment approach point to studies that show the approach can perform just as well as actuarial methods

... when clinicians are given the kind and amount of information that they regularly use; are allowed to conduct realistic diagnostic interviews; and their judgments are analyzed with statistical methods that detect the complexity in their judgments.<sup>330</sup>

<sup>328</sup> Heilbrun & Brooks, 2010.

<sup>329</sup> Neal et al., 2022.

<sup>330</sup> Milchman, 2015, 103.

However, those studies also contain methodological weaknesses,<sup>331</sup> and ultimately the evidence suggests that more objective and explicit approaches will be more resistant to biasing factors and more open to independent scrutiny than approaches that are more subjective and implicit.<sup>332</sup>

150. There is also a potential for debate about our characterizations of the evidence and extent to which forensic psychologists are aware of and follow the best-practice recommendations described. For example, there are different perspectives on the overall status of the accuracy of forensic psychological assessments<sup>333</sup> and the success of bias management by practitioners.<sup>334</sup> In some cases these discrepancies can be reconciled through careful consideration of the terms of reference and/or the evidence being relied upon to support differing views. However, in others, they likely reflect genuine substantive differences in perspective on the issues. We have cited the evidence that we rely upon to form our views and ultimately believe that there is a credible empirical foundation for the opinions we have expressed. However, the Commission should be aware that there are practitioners who would dispute aspects of our report.

### Ethical Obligations and Codes of Conduct

151. Dr. Kristy Martire is licensed to practice forensic psychology in a clinical capacity in Australia and is bound by the Australian Psychological Society Code of Ethics<sup>335</sup> and Ethical Guidelines for Psychological Practice in Forensic Contexts.<sup>336</sup> As a licensed psychologist in the United States (and specifically in the state of Arizona), Dr. Tess Neal is bound by the American Psychological Association's Ethical Principles of Psychologists and Code of Conduct,<sup>337</sup> the Speciality Guidelines for Forensic Psychology,<sup>338</sup> and the Arizona Board of Psychologist Examiners Statutes and Rules (Arizona Revised Statutes Title 32 Chapter 19.1. Psychologists).<sup>339</sup>

152. In our respective ethics codes in Australia and in the United States, there are both enforceable rules (e.g., minimum standards of conduct for which violations have consequences) and aspirational principles toward which psychologists are to strive. This approach is similar to the design of the Canada Psychological Association's ethics code for psychologists.<sup>340</sup> The cardinal elements of professional ethics are built into the aspirational principles of these ethics codes, which are similar to one another. In our approach to the current report, we believe we have complied with our ethical and professional responsibilities by following our ethical obligations, codes of conduct, and licensure rules as identified above.

153. Our approach to this report also complies with the Nova Scotia Civil Procedures Rules

(reproduced and cross-referenced below) as follows:

55.04(1) An expert's report must be signed by the expert and state all of the following as representations by the expert to the court [see [I. Representations to the Commission](#)]:

- (a) the expert is providing an objective opinion for the assistance of the court, even if the expert is retained by a party [see [Bias Management, Quality Assurance, and Opinion Expression](#)];
  - (b) the witness is prepared to testify at the trial or hearing, comply with directions of the court, and apply independent judgment when assisting the court [see [I. Representations to the Commission](#) and [Bias Management, Quality Assurance, and Opinion Expression](#)];
  - (c) the report includes everything the expert regards as relevant to the expressed opinion, and it draws attention to anything that could reasonably lead to a different conclusion [see [V. Evaluating Our Opinion and Alternative Views and Disagreements](#)];
  - (d) the expert will answer written questions put by parties as soon as possible after the questions are delivered to the expert [see [I. Representations to the Commission](#) and [Sources Informing Our Opinion](#)];
  - (e) the expert will notify each party in writing of a change in the opinion or of a material fact that was not considered when the report was prepared and could reasonably affect the opinion, as soon as possible after arriving at the changed opinion or becoming aware of the material fact [see [I. Representations to the Commission](#)].
- (2) The report must give a concise statement of each of the expert's opinions and contain all of the following information in support of each opinion [see [II. Our Opinion](#)].
- (a) details of the steps taken by the expert in formulating or confirming the opinion [see [V. Evaluating Our Opinion](#)];
  - (b) a full explanation of the reasons for the opinion including the material facts assumed to be true [see [Evaluating Our Opinion: Limitations and Assumptions](#)], material facts found by the expert [Not Applicable in Part 1], theoretical bases for the opinion [see [III. Basis for Our Opinion](#)], theoretical explanations excluded [see [Evaluating Our Opinion: Alternative Views and Disagreements](#)], relevant theory the expert rejects [see [Evaluating Our Opinion: Alternative Views and Disagreements](#)], and issues outside the expertise of the expert and the name of the person the expert relies on for determination of those issues [see [Evaluating Our Opinion: Limitations and Assumptions](#)];
  - (c) the degree of certainty with which the expert holds the opinion [[II. Our Opinion](#) and [Bias Management, Quality Assurance, and Opinion Expression](#)];

- 
- (d) a qualification the expert puts on the opinion because of the need for further investigation, the expert's deference to the expertise of others [see [II. Our Opinion](#), [Bias Management, Quality Assurance, and Opinion Expression](#), and [Evaluating Our Opinion: Limitations and Assumptions](#)], or any other reason.
- (3) The report must contain information needed for assessing the weight to be given to each opinion, including all of the following information:
- (a) the expert's relevant qualifications, which may be provided in an attached résumé [see [Evaluating the Validity of Our Approach, Our Proficiency, Résumé Martire, Résumé Neal](#)];
  - (b) reference to all the literature and other authoritative material consulted by the expert to arrive at and prepare the opinion, which may be provided in an attached list [see [Sources Informing Our Opinion, Bias Management, Quality Assurance, and Opinion Expression](#) and [VI. Works Cited](#)];
  - (c) reference to all publications of the expert on the subject of the opinion [see [Résumé Martire](#) and [Résumé Neal](#)];
  - (d) information on a test or experiment performed to formulate or confirm the opinion, which information may be provided by attaching a statement of test results that includes sufficient information on the identity and qualification of another person if the test or experiment is not performed by the expert [Not Applicable];
  - (e) a statement of the documents, electronic information, and other things provided to or acquired by the expert to prepare the opinion [see [III. Basis for Our Opinion, Sources Informing Our Opinion](#) and [Bias Management, Quality Assurance, and Opinion Expression](#)].

## Résumé Martire

November 2021

### KRISTY MARTIRE

ASSOCIATE PROFESSOR

School of Psychology  
University of New South Wales (UNSW), Sydney  
New South Wales, Australia, 2052

[k.martire@unsw.edu.au](mailto:k.martire@unsw.edu.au)

#### EDUCATION

- 
- |      |  |
|------|--|
| 2008 | Ph.D. Psychology, University of New South Wales, Sydney<br>Dissertation: Helping jurors to evaluate eyewitness identification evidence; The role of expert testimony and judicial instruction.<br>Supervisor: Richard Kemp |
| 2008 | M.Psychol (Forensic), University of New South Wales, Sydney  |
| 2004 | B.A., Psychology & History, University of Sydney, First Class  |

#### EMPLOYMENT

- 
- |         |  |
|---------|--|
| 2020–   | Associate Professor, University of New South Wales, Sydney   |
| 2017–20 | Associate Professor & Director of the Master of Psychology (Forensic) Program, University of New South Wales, Sydney |
| 2014–17 | ARC DECRA Fellow, University of New South Wales, Sydney  |
| 2013–14 | Senior Lecturer, University of New South Wales, Sydney   |
| 2011–13 | Lecturer, University of New South Wales, Sydney  |
| 2008–11 | Research Fellow, National Drug & Alcohol Research Centre, Sydney   |

#### PRIZES, AWARDS & SCHOLARSHIPS

- 
- |      |  |
|------|--|
| 2017 | Goldstar Award, University of New South Wales, Faculty of Science            |
| 2016 | Goldstar Award, University of New South Wales, Faculty of Science            |
| 2014 | Goldstar Award, University of New South Wales                                |
| 2013 | Discovery Early Career Researcher Award (DECRA), Australian Research Council |

2012	Best Oral Presentation, Australia & New Zealand Forensic Science Society
2010	Dean's Rising Star Award, University of New South Wales, Faculty of Medicine
2009	Machonochie Prize for the best publication by a PhD, Master or Honours student in Forensic Psychology, Australian Psychological Society Forensic College
2007	Postgraduate Student Support Scholarship, University of New South Wales
2004	Australian Postgraduate Award, Australian Federal Government

**GRANTS & CONTRACTS**

External Funding		*Role: PI - Principle (Sole/Lead) Investigator; I - Investigator (Team member)	
Years	Agency & Project Title	Amount	Role*
2021-22	Victoria Police	\$19,252	PI
2021	Collaborative Journal Club and Research Synthesis Aston Institute for Forensic Linguistics	£6,000	PI
2019-20	Review of literature on lay comprehension of likelihood ratios. National Institute of Forensic Sciences	\$11,000	PI
2019-20	The optimal method of communication for forensic expert opinions across disciplines. British Academy	£33,153	I
2016-18	Facial recognition in the criminal justice system. Australian Research Council	\$200,500	PI
2016	Improving the communication of forensic science evidence to courts. Expert Opinion Services	\$2,116	PI
2014	Judicial attitudes toward expert evidence. Australian Research Council	\$393,161	PI
2012-15	Unravelling the golden thread: Presumption of innocence, fair trial and lay belief change. National Health & Medical Research Council	\$1,951,000	I
2011	A trial of financial counselling and NRT for socioeconomically disadvantaged smokers. Attorney General's Department	\$8,000	PI
2011	MERIT Annual Report, 2010 Attorney General's Department	\$8,000	PI
2010	MERIT Annual Report, 2009 Attorney General's Department	\$8,000	PI
2009	MERIT Annual Report, 2008 Attorney General's Department	\$8,000	PI
2008	MERIT Annual Report, 2007 New South Wales Health	\$14,688	I
2008	Evaluation of the impact of offence-related debt on AOD treatment Justice Health	\$20,000	I
2008	Evaluation of the Connections Project Attorney General's Department	\$30,000	I
	Evaluation of the MERIT Program		

---

**REPORT TO MASS  
CASUALTY  
COMMISSION**
**Internal Funding**

Year	Scheme & Project Title	Amount	Role*
2021	School Research Grant Understanding evidence evaluation by people who endorse implausible claims	\$3,000	PI
2018	Faculty Research Grant Using tournaments to understand the limits and acquisition of expertise in forensic sciences.	\$16,606	PI
2017	Faculty of Science Goldstar Award Mind-environment interactions in probability judgments	\$40,000	PI
2016	Faculty of Science Goldstar Award Mind-environment interactions in forensic probability judgments	\$40,000	PI
2014	UNSW Goldstar Award Intent and interpretation in the communication of forensic science evidence	\$30,000	PI
2013	Faculty Early Career Researcher Grant Weak evidence effect: Expectation, averaging or neglect?	\$20,000	PI
2012	Faculty Early Career Researcher Grant Expressing and understanding evidence.	\$14,000	PI
2011	Faculty Early Career Researcher Grant Trial of measures and instrumentation to test recall accuracy for smoking behaviours.	\$23,000	PI

2013 *Do jurors understand forensic science evidence when presented in a Bayesian framework?*  
Netherlands Forensic Institute Seminar Series, The Hague, Netherlands.

**Invited &/ Funded Australia**

Vic chapter AAFS

2020 *Scientific understanding of expertise*, Judicial Commission of NSW and District Court of NSW Twilight Seminar Series, Sydney.

2020 *What it means to be an expert*, UNSW Face Expertise Workshop, Sydney.

2019 *Weighing expert opinions*, Sydney Institute of Criminology, Sydney.

2019 *Uncertainty & the communication of forensic medical evidence to legal stakeholders*, Annual Conference of the Healthcare Excellence Institute, Melbourne.

2019 *Assessing the reliability of lay and expert witnesses*, Annual Conference of South Australian Magistrates, Adelaide.

2019 *Communicating & comprehending expert evidence*, Evidence-Based Forensics Initiative presentation for the President of Victorian Court of Appeal, Sydney.

2018 *Identifying experts*, Australian Academy of Forensic Sciences Seminar Series, Sydney.

2018 *Expert estimates of likelihood: Are they reliable enough for presentation in courts?* Australian Society of Forensic Document Examiners, Canberra.

2018 *They're experts, but is it real expertise?* National Family Lawyers Conference, Brisbane.

2018 *Uncertainty & the communication of forensic science evidence to legal stakeholders*, International Society of Forensic Radiology, Melbourne.

2018 *The science of expertise*, Australian Land & Environment Court, Sydney.

2018 *Witness & memory reliability (broadly interpreted)*, Industrial Relations Commission, Sydney.

2017 *The science of expertise*, Australia & New Zealand Forensic Science Society, Hobart.

2017 *Thinking forensic science*, Australian Land & Environment Court, Sydney

2017 *Clear communication through clear purpose*, Australian Academy of Forensic Sciences 50<sup>th</sup> Anniversary Symposium, Sydney.

2017 *Considering expert opinions*, Victorian Institute of Forensic Medicine, Melbourne.

2017 *Thinking forensics*, NSW Young Lawyers Association, Sydney.

2016 *The science of expertise*, NSW Young Lawyers Association, Sydney.

2016 *Forensic science, validity, and the President's Council of Advisors on Science and Technology (PCAST) report*, Office of the Department of Public Prosecutors Seminar Series, Sydney.

2016 *Lay interpretations of evidence & law*, University of Wollongong Bachelor of Laws, Sydney.

- 2016 *Scientific approaches to expertise*, NSW District Court Seminar Series, Sydney.
- 2015 *Expertise, validation & error*, Forensic Sciences South Australia, Adelaide.
- 2015 *How to cross-examine an expert witness: Reconciling legal and scientific sufficiency for 'expertise'*, Australia & New Zealand Forensic Science Society, Canberra.
- 2015 *Evaluating expert evidence in the criminal justice system*, Judicial College of Victoria, Melbourne.
- 2015 *How to cross-examine an expert witness: Expertise, validation & error*, Victoria Police Forensic Services Department, Melbourne.
- 2015 *Juries & their understanding of expert evidence*, University of Wollongong Bachelor of Laws, Sydney.
- 2015 *The validation paradigm & error*, New South Wales Police (with Kemp)
- 2015 *Juries & their understanding of expert evidence*, New South Wales Public Defenders, Sydney.
- 2014 *Eyewitness testimony & identification evidence*, Aboriginal Legal Service, Sydney.
- 2014 *Crystal clear as mud: Expert opinions and the jury*, Office of the Department of Public Prosecutors, Sydney.
- 2013 *The effects of presumptions on evidence interpretation*, Melbourne Law School Criminal Evidence & Procedure Workshop, Melbourne.
- 2013 *Challenging expert evidence: A new toolkit for defense lawyers*, Legal Aid NSW Criminal Law Conference, Sydney. (with San Roque)
- 2013 *Do juries hear what forensic scientists say?* Australian Academy of Forensic Sciences Conference, Sydney.
- 2011 *Exploring a just world: Under the microscope and through the looking glass*, University of Sydney Colloquium Series, Sydney.
- 2011 *Fines & Debt among NSW prisoners with a history of problematic substance use*, Justice Health Seminar Series, Sydney.
- 2011 *How likely is it that fact finders understand likelihood ratios?* Impressions & Expressions Conference of the Australian Academy of Forensic Sciences, Sydney.
- 2010 *MERIT – Why divert?* NSW Police Drug & Alcohol Coordination Unit, Lismore.
- 2010 *Where there's smoke there's fire: Tobacco, financial strain and social disadvantage*, NSW Financial Counsellors Association, Sydney.

**Selected Conference Papers**

- 2020 Martire, K.A., Montgomery-Farrer, B., Edmond, G., & Navarro, D. The expert persuasion expectancy (ExPEX) framework: What attributes influence the persuasiveness of an expert opinion? American Psychology-Law Society, New Orleans.

**TRAINING**

---

**Recurring**

- 2015–20 *Assessing the credibility and reliability of witnesses*, National Judicial Orientation Program (Bi/annual) Sydney, Melbourne, Adelaide, Gold Coast.
- 2018–19 *Thinking Forensics*, Australian Federal Police, Canberra, 5 occasions (with Kemp & Towler).
- 2013–14 *Validation trial development & test design workshop*, (with Kemp) for:
- 1) Forensic Document Examiners Scientific Advisory Group, Sydney;
  - 2) Shoe & Tire Impression Scientific Advisory Group, Sydney;
  - 3) Victoria Police Forensic Services Department, Melbourne.

**Occasional**

- 2021 *Thinking forensics: Cognitive science for forensic scientists*, National Criminal Investigation Service Norway, Online Sydney-Norway.
- 2018–19 *Thinking forensics: Cognitive science for forensic scientists*, National Institute of Forensic Sciences Ian Reibling New Practitioner Workshop, Perth, Sydney.
- 2017 *Forensic evidence workshop*, (with Ballantyne, San Roque, Edmond), for Office of Department of Public Prosecutors, Office of Department of Public Defenders, Sydney.
- 2017 *Considerations when designing human performance tests in the forensic sciences*, Australia & New Zealand Forensic Science Society, Hobart
- 2015 *Crystal clear as mud: The impact of expert evaluative opinions on lay decision-making*, University of Lausanne Postdoctoral Retreat, Les Diablerets, Switzerland.
- 2015 *Validation trial development & test design workshop Part 2, Data Analysis*, (with Kemp & Towler), for Forensic Document Examiners Scientific Advisory Group, Sydney.

**PROFESSIONAL POSITIONS**

Associate Professor, School of Social & Behavioural Sciences, Arizona State University 2021–Present  
Affiliate Professor, School of Criminology and Criminal Justice (2021–Present)  
Inaugural Director, Future of Forensic Science Initiative (2020–Present)  
Graduate Faculty Member, Department of Psychology (2019–Present)  
Assistant Professor, School of Social & Behavioural Sciences, Arizona State University 2015–21  
Interim Director, Law and Psychology Ph.D. Program (Fall 2019)  
Interim Director, Forensic Psychology M.S. Program (Fall 2019)  
Interim Area Liaison, Law & Psychology, School of Social & Behavioural Sciences (Fall 2019)  
National Science Foundation Postdoctoral Fellow, U. of Nebraska Public Policy Center 2013–15  
Postdoctoral Resident in Forensic Psychology, U. Massachusetts Medical School 2012–13  
American Psychological Assn-Accredited Pre-doctoral Clinical Psychology Internship 2011–12  
University of Massachusetts Medical School & Worcester State Hospital

**EDUCATION**

Ph.D. Clinical Psychology, Psychology-Law Concentration, Quantitative Minor, U. of Alabama 2012  
M.A. Clinical Psychology, Psychology and Law Concentration, U. of Alabama 2007  
B.A. Graduated with Highest Distinction, Honors Program. U. of Nebraska-Lincoln 2005  
Majors: Psychology, English. Minors: Sociology, Criminal Justice

**PROFESSIONAL CREDENTIALS**

Licensed in Psychology, States of AZ (Lic #PSY-004630) and NE (Lic #844 [inactive]) Current  
Designated Forensic Professional, State of Massachusetts Current

**RESEARCH INTERESTS**

The central theme motivating my work is the desire to understand the way people think and reach decisions. I am especially interested in human judgment processes as they intersect with the law, and am fascinated by the nature and limits of expertise. This fascination underpins both my basic and applied research activities. My basic work focuses on understanding human judgment processes – especially among trained experts, and my more applied work focuses on improving forensic experts' judgments in particular. My work on these topics is organized by three overlapping categories: expert judgment, lay judgment about experts, and public policy implications.

**SELECTED HONORS AND AWARDS***External Honors and Awards*

Selected as a Fulbright Scholar, U.S. to Australia (2021–22)  
American Psychological Association Fellow, Elected by board of directors & council of reps (2021)

- Outstanding Teaching & Mentoring Award as “an internationally prominent teacher and mentor”  
Society for the Psychological Study of Social Issues (APA Div 9) (2021)
- Named a Member of the American Bar Foundation’s Access to Justice Research Network (2020–21)
- Early Career Achievement Award, American Psychological Association (2018)
- Early Career Teaching & Mentoring Award, American Psychology-Law Society (APA Div 41) (2018)
- Teaching Resource Prize, Society for the Psychological Study of Social Issues (APA Div 9) (2018)
- Early Career Achievement Award, APA Division 18 Psychologists in Public Service (2017)
- Named a “Rising Star” by the Association for Psychological Science, a recognition of early-career scholars whose work has “advanced the field and signals great potential for continued contributions” (2016)
- Saleem Shah Award for Early Career Excellence in Psychology and Law, co-awarded by American Psychology-Law Society (APA Div 41) & American Academy of Forensic Psych (2016)
- Michelle Alexander Early Career Award for Scholarship and Service from the Society for the Psychological Study of Social Issues (APA Div 9) (2016)

*Internal Honors and Awards*

- PLuS Alliance Fellow (ASU, King’s College London, & UNSW Sydney focusing research capacities on global challenges & provide world-class higher education in high-need areas) (2020)
- ASU Outstanding Faculty Mentor Award (Outstanding Master’s Mentor) (2020)
- ASU President’s Award for Innovation co-awardee (w/ Schweitzer, Saks, Fradella, & Salerno) (2020)
- Outstanding Research Award from ASU New College of Interdisciplinary Arts & Sciences (2019)
- Outstanding Teaching Award from ASU New College of Interdisciplinary Arts & Sciences (2018)
- ASU Leadership Academy team member (2017-2018), teamLA Cohort III – “Forensics” (2017)
- ASU Lincoln Center for Applied Ethics Fellow (2017-2018) with research support (2017)
- ASU Lincoln Center for Applied Ethics Fellow (2016-2017) with research support (2016)

*He Says, She Says, But Who Says it Best? Gender of Your Expert in Intellectual Property Case*
10. The National Center for State Courts, Williamsburg VA 2014  
*'Gut Instinct' vs. Data-Based Evaluations in Forensic Mental Health Assessment*

**CHAired CONFERENCE SYMPOSIA (PEER-REVIEWED)**

1. **T.M.S. Neal** (2022, March). *Personality assessments in legal contexts: A special issue of the Journal of Personality Assessment* [Symposium]. Society for Personality Assessment, Chicago, IL.
2. **T.M.S. Neal** (2022, March). *Consulting in the Legal System* [Symposium]. American Psychology-Law Society, Denver, CO.
3. **T.M.S. Neal** (2020, March). *Legal scrutiny of psychological assessment evidence*. [Symposium]. American Psychology-Law Society, New Orleans, LA. Discussants: D. C. Murrie, J. Skeem, T. Grisso, K.A. Martire, K.F. Geisinger, C. Slobogin.
4. **T.M.S. Neal** (2020, March). *Calibration in court: Jurors' use of scientific information*. [Symposium]. American Psychology-Law Society, New Orleans, LA. Discussant: D. Krauss.
5. **Neal, T.M.S.** & Geisinger, K. (2019, August). *Psychological assessments and the law: Are courts effectively gatekeeping expert evidence?* [Symposium]. American Psychological Association, Chicago, IL.
6. **Neal, T.M.S.** (2017, March). *Confirmation bias, hindsight bias, and measuring bias in forensic psychology*. [Symposium]. American Psychology-Law Society, Seattle, WA.
7. Chadoir, S.R. & **Neal, T.M.S.** (2016, June). *Early career scholars professional development roundtable*. [Symposium]. Society for the Study of Social Issues, Minneapolis, MN.
8. **Neal, T.M.S.** & PytlikZillig, L.M. (2016, June). *Trust: Deconstructing the relationship of institutions to the public they serve*. [Symposium]. Society for the Study of Social Issues, Minneapolis, MN.
9. **Neal, T.M.S.** & Kois, L. (2015, March). *Can we have it all? Family formation, career trajectory, and work-life management*. American Psychology-Law Society, San Diego, CA.

10. Neal, T.M.S. (2014, March). *Expert witness bias*. [Symposium]. American Psychology-Law Society, New Orleans, LA. Discussant: T. Grisso.
11. Murrie, D.C. & T.M.S. Neal (2013, March). *When and how are experts biased? Understanding Adversarial Allegiance in Forensic Assessment*. [Symposium]. American Psychology-Law Society, Portland, OR. Discussant: R.K. Otto.
12. Neal, T.M.S. (2013, March). *Women as expert witnesses*. [Symposium]. American Psychology-Law Society, Portland, OR. Discussant: M. O' Connor.

#### CONFERENCE SYMPOSIA INVITED DISCUSSANT

1. Discussant: T.M.S. Neal (2020, May). *New directions in the psychological study of access-to-justice and civil justice design*. [Symposium]. Law and Society Association annual meeting, Denver, CO [Virtually].
2. Discussant: T.M.S. Neal (2019, March). *Acknowledging and addressing gender-based bias and harassment in psychology and law*. [Symposium]. American Psychology-Law Society, Portland, OR.
3. Discussant/Moderator: T.M.S. Neal (2018, June). *Psychology of legal judgment and decision-making*. [Symposium]. Law and Society Association annual meeting, Toronto, ON, CAN.
4. Discussant: T.M.S. Neal. (2017, March). *Gender, sexuality, and the legal system*. [Symposium]. American Psychology-Law Society conference, Seattle, WA.
5. Discussant: T.M.S. Neal (2016, March). *Improving forensic science: Contributions from psychology*. [Symposium]. American Psychology-Law Society conference, Atlanta, GA.

#### CONFERENCE SYMPOSIA INVITED PANELIST

1. Panelist: T.M.S. Neal (2020, March). *Law, Psychology, and Policy: Using Research to Inform Law Reform* [Symposium]. American Psychology-Law Society, Denver CO.
2. Panelist: T.M.S. Neal (2022, March). *Can we talk? Facilitating a dialogue between clinicians and researchers*. [Interactive Symposium]. Society for Personality Assessment, Chicago, IL.
3. Panelist: T.M.S. Neal (2021, August). [SPSSI teaching award winner panel: What works in teaching social issues?](#) [Interactive Symposium]. Society for the Psychological Study of Social Issues, Virtual Conference.
4. Panelist: T.M.S. Neal (2019, March). *Where are we and where do we go from here? Status and future directions in psychology and law*. [Symposium]. American Psychology-Law Society, Portland, OR.
5. Panelist: T.M.S. Neal (2019, March). *Productivity and impact: Doing more with less*. [Symposium]. American Psychology-Law Society, Portland, OR.

#### CONFERENCE PAPERS (PEER-REVIEWED)

1. Neal, T.M.S., Sellbom, M., & de Ruiter, C. (2021, March). *Introduction to, rationale for, and summary of the Journal of Personality Assessment special issue on psychological assessments in legal contexts*. Society for Personality Assessment annual convention, Chicago, IL.
2. Neal, T.M.S., Denne, E. \*, Mathers, E. \*, & Pronin, E. (2021, August). *The bias blind spot among forensic mental health experts*. European Association of Psychology and Law [Virtually].
3. Neal, T.M.S. (2021, May). *Psychological assessments in legal contexts: Legal background to examine whether Australian judges are screening out "junk science."* [Legal Scholar Committee paper presentation]. American Psychology-Law Society, Denver, CO [Virtually].

4. McCowan, K.,\* Eagan, S.,\* **Neal, T.M.S.**, Gerais, S.J., Bornstein, B.H., Dellapaolera, K.S.,\* Denne, E.,\* & Schweitzer, N.J. (2021, May). *Jurors' calibration to complicated scientific evidence*. [Paper presentation]. Law and Society Association, Chicago, IL [Virtually].
5. King, C.M., Hitchcock, S.,\* Gonzalez, K.,\* & **Neal, T.M.S.** (2020, August). *Frequency of legal admissibility challenges to psychological assessment tools*. [Paper presentation]. American Psychological Association, Washington DC [Virtually].
6. **Neal, T.M.S.** & King, C.M. (2020, May). *Legal scrutiny of psychological assessment evidence*. [Paper presentation]. Law and Society Association, Denver, CO [Virtually].
7. **Neal, T.M.S.**, Slobogin, C., Saks, M.J., Faigman, D., Geisinger, K.F. (2020, March). Are courts effectively gatekeeping psychological assessment evidence? In T.M.S. Neal (Chair), *Legal scrutiny of psychological assessment evidence* [Symposium]. American Psychology-Law Society, New Orleans, LA.
8. King, C.M. & **Neal, T.M.S.** (2020, March). Investigating challenges to psychological tools in court: A birds-eye perspective. In T.M.S. Neal (Chair), *Legal scrutiny of psychological assessment evidence* [Symposium]. American Psychology-Law Society, New Orleans, LA.
9. Line, E.,\* & **Neal, T.M.S.** (2020, March). Attorney reactions to psychological assessment evidence in court: Descriptives and experimental data. In T.M.S. Neal (Chair), *Legal scrutiny of psychological assessment evidence* [Symposium]. American Psychology-Law Society, New Orleans, LA.
10. Line, E.,\* Jaramillo, S.,\* **Neal, T.M.S.**, & Horne, Z. (2020, March). Using Bayesian Models to assess juror decision-making in ecologically valid contexts. In K.M. Byrd (Chair), *From the lab to the courtroom: Forensic science expert analyses and lay perceptions of evidence* [Symposium]. American Psychology-Law Society, New Orleans, LA.
11. Dellapaolera, K.S.,\* Gervais, S.J., Fessinger, M.B.,\* Bornstein, B.H., & **Neal, T.M.S.** (2020, March). The effects of gist information and scientific quality on damages in a civil trial. In T.M.S. Neal (Chair), *Calibration in court: Jurors' use of scientific information*. [Symposium]. American Psychology-Law Society, New Orleans, LA.
12. McCowan, K.,\* Denne, E.,\* Velazquez, A.,\*\* Milligan, R.,\*\* Line, E.N.,\* **Neal, T.M.S.**, Gervais, S.J., Bornstein, B.H., & Dellapaolera, K.S.\* (2020, March). Calibration in court: Predictors of jurors' understanding of evidence strength. In T.M.S. Neal (Chair), *Calibration in court: Jurors' use of scientific information*. [Symposium]. American Psychology-Law Society, New Orleans, LA.
13. McCowan, K.,\* Plantz, J.,\* Mathers, E.,\*\* Barcelo, J.,\*\* & **Neal, T.M.S.** (2020, March). Juror scientific reasoning skills and discussion of scientific evidence during deliberation. In T.M.S. Neal (Chair), *Calibration in court: Jurors' use of scientific information*. [Symposium]. American Psych-Law Society, New Or., LA.
14. Denne, E.,\* Line, E.N.,\* Plantz, J.,\* Mathers, E.,\*\* Selman, S.,\*\* & **Neal, T.M.S.** (2020, March). What we can learn from jury note taking: A content analysis. In T.M.S. Neal (Chair), *Calibration in court: Jurors' use of scientific information*. [Symposium]. American Psychology-Law Society, New Orleans, LA.

#### POSTER PRESENTATIONS AT ASU

1. McCowan, K.\* & Neal, T.M.S. (2020, September). *Discerning evidence strength in civil sexual assault cases* [Poster]. ASU Institute for Social Science Research Graduate Contest, Tempe, AZ.
2. Plantz, J.,\*\* Mathers, E.,\*\* Milligan, R.,\*\* Velazquez, A.,\*\* Fatula, E.,\*\* Rincon, S.,\*\* McCowan, K.,\* Line, E.C.,\* Denne, E.,\* & Neal, T.M.S. (2019, April). *How jurors deliberate scientific evidence: Undergraduates assisting an NSF project (2018-2019)* [Poster]. ASU NCUIRE Research Symposium.
3. Plantz, J.\*\* & Neal, T.M.S. (2019, April). *Prison inmates' perception of treatment and treatment-seeking behaviours: A study proposal* [Poster]. ASU NCUIRE Research Symposium.
4. Denne, E.\* & Neal, T.M.S. (2018, November). *Exploring bias and the bias blind spot among expert witnesses in a simulated child abuse case* [Poster]. ASU Institute for Social Science Research Graduate Contest, Tempe, AZ.
5. Line, E.C.\* & Neal, T.M.S. (2018, November) *Judges' and attorneys' reactions to varying qualities of psychological assessment tools in court* [Poster]. ASU Institute for Social Science Research Graduate Contest, Tempe, AZ.
6. McCowan, K.\* & Neal, T.M.S. (2018, November). *Are jurors less biased than judges in discerning evidence strength in sexual assault cases?* [Poster]. ASU Institute for Social Sci Research Grad Contest, Tempe, AZ.
7. Hamza, C.\* & Neal, T.M.S. (2017, November). *The role of implicit and explicit social-cognitive biases on jurors' conceptualizations of insanity* [Poster]. ASU Institute for Social Sci Rsch Grad Contest, Tempe, AZ.
8. Hight, M.\* & Neal, T.M.S. (2017, November). *The effects of insanity verdict options and instructions on juror decisions* [Poster]. ASU Institute for Social Science Research Graduate Contest, Tempe AZ.
9. Siso, C.B.\*\* & Neal, T.M.S. (2017, April). *A comparison of three types of insanity defenses on juror decision-making* [Poster]. ASU Barrett Honors College Symposium & ASU NCUIRE Research Symposium.
10. Velez, R.E.,\*\* Hight, M.,\* Hamza, C.,\* Siso, C.,\*\* Oliveira, B.,\*\* Howatt, B.C.,\* & Neal, T.M.S. (2017, April). *Can direct examination sensitize jurors to the scientific validity of expert testimony?* [Poster]. ASU NCUIRE Research Symposium. (Poster won 1<sup>st</sup> place).
11. Hight, M.,\* Hamza, C.,\* Siso, C.B.,\*\* & Neal, T.M.S (2016, December). *The effects of insanity verdict option and instructions on juror decisions in criminal responsibility cases* [Poster]. ASU Institute for Social Science Research Graduate Contest, Tempe AZ.
12. Goddard, H.N.,\*\* Haas, J.R.,\*\* Marshall, S.R.,\*\* Velez, R.E.,\*\* Howatt, B.C.,\*\* Neal, T.M.S., Krauss, D., Quamme, C.M.,\*\* Ramos Jr., D.,\*\* & Philipp, C.\* (2016, April). *Can direct examination sensitize jurors to the scientific validity of expert testimony?* [Poster]. ASU NCUIRE Research Symposium, & ASU/ Glendale Community College Psi Chi/Psi Beta Broadening Perspectives Research Expo. (Poster won 3<sup>rd</sup> place).
13. Howatt, B.C.,\* Warner, M.,\* Marshall, S.R.,\*\* Velez, R.E.,\*\* Goddard, H.N.,\*\* Haas, J.R.,\*\* Ramos Jr., D.,\*\* Quamme, C.M.,\*\* Philipp, C.,\* & Neal, T.M.S. (2016, April). *Solving the Replication Crisis: A*

*Contribution to Open Science and the Registered Replication* [Poster]. ASU NCUIRE Research Symposium, and the ASU/Glendale C.C. Psi Chi/Psi Beta Broadening Perspectives Research Expo (Poster won 1<sup>st</sup> place).

#### TEACHING EXPERIENCE

I have taught nine different courses at ASU, eight of which I created as part of building the new suite of Law and Psychology programs. I teach across the curriculum: graduate and undergraduate, in-person and online, small and large, and core as well as specialty courses. My student evaluations are consistently excellent. I have received numerous teaching awards, have been invited to present in faculty teaching showcases, and have mentored my students to varied, successful outcomes.

#### COURSES TAUGHT AT ARIZONA STATE UNIVERSITY

Semester	Course*	Enrolled	Rating <sup>†</sup>	Type
Fall 2015	PSY 366: Abnormal Psychology	58	5	In-Person
Spring 2016	PSY 494: Special Topic: Forensic Psychology	33	5	In-Person
Fall 2016	PSY 494: Special Topic: Correctional Psych	23	4.9	In-Person
Fall 2016	PSY 598: Special Topic: Correctional Psych	6	5	In-Person
Spring 2017	PSY 368: Forensic Psychology	25	4.8	Online
Spring 2017	PSY 368: Forensic Psychology	24	4.9	Online <sup>‡</sup>
Spring 2018	PSY 546: Advanced Forensic Psychology	77	4.8	Online
Spring 2018	PSY 474: Correctional Psychology	101	4.9	Online
Fall 2018	PSY 547: Advanced Correctional Psychology	45	4.9	Online
Spring 2019	PSY 368: Forensic Psychology	59	4.9	In-Person
Fall 2019	PSY 546: Advanced Forensic Psychology	11	5	In-Person
Spring 2020	PSY 547: Advanced Correctional Psychology	151	5	Online
Fall 2020	PSY 474: Correctional Psychology	250	5	Online
Spring 2021	PSY 546: Advanced Forensic Psychology	230	4.9	Online

\*Classification of courses: 100–299 are for lower-division undergraduates; 300–499 are for upper-division undergraduates; 500–799 are graduate courses.

<sup>†</sup> Description of student rating of teaching scale: “I would rate the instructor’s overall performance in the course: (5 = highest rating, 1 = lowest rating).”

<sup>‡</sup> = Course taught online, but designed for students enrolled in in-person degree program.

#### COURSES TAUGHT IN PREVIOUS APPOINTMENTS

Intro to Psychology; Abnormal Psych; Social Psych; Psych of Gender; Psychology, Law, and Justice

#### ASU UNDERGRADUATE BARRETT HONORS ENRICHMENT CONTRACTS

Honors contracts provide opportunities for honors students taking non-honors courses to take on additional projects with the course instructor in order to have the course qualify for honors credit. These course enrichments allow instructors and students to interact in a tailored way about challenging academic topics. I always provide optional enrichment opportunities for students in my undergraduate courses, and many honors students (and a few non-honors students) choose to engage. [Here is one example](#). The number of students I have worked with individually on these intensive interactive activities each semester include:

Fall 2015: 5 students | Sp 2016: 8 | Fall 2016: 1 | Sp 2017: 3 | Sp 2018: 1 | Sp 2019: 4 | Fall 2020: 4

**STUDENT MENTORING****CHAired DISSERTATIONS**

Spring 2022 KM, *Moral foundations and prejudicial evidence: Helping jurors disregard inadmissible evidence*

**CHAired THESEs***ASU Psychology MS Theses*

Fall 2022 EM, *Neuropsychological assessment evidence in court*

Summer 2020 ED, *Bias & the bias blind spot among expert witnesses in a simulated child abuse case*

Spring 2020 EL, *Experts screening experts: Are courts effectively gatekeeping psychological assessment evidence?*

Spring 2020 KM, *Discerning evidence in civil sexual assault cases*

Spring 2018 CH, *The role of implicit social-cognitive biases in judgments of insanity*

Spring 2018 MH, *The effects of insanity verdict options and instructions on juror decisions in criminal responsibility cases.*

*ASU Psychology MS Applied Project*

Spring 2021 JP, *The Sentencing Goals Inventory*

*ASU Undergraduate Barrett Honors Theses*

Spring 2020 AV, *The bias blind spot among professional forensic psychologists*

Fall 2017 RV, *Laypeople's perceptions of expert bias in 26 domains*

Spring 2017 CS, *A comparison of three types of insanity defenses on juror decision-making*

**COMMITTEE MEMBERSHIPS (NON-CHAIR)***Committees Outside of ASU*

AW (Forensic Psychology Master Student, University of New South Wales, Sydney Australia)

EGD (Clinical-Forensic Psychology Doctoral Student, John Jay College of Criminal Justice)

RG (Clinical Psychology Doctoral Student, The Chicago School of Professional Psychology)

**STUDENT GRANTS & AWARDS**

New College Outstanding Graduate Award (faculty nominator for JP [2021 winner], EL [2020 winner] and ATJ [2018 winner])

ASU Tripke Fellowship (faculty nominator and mentor for EL, awarded in 2020)

National Science Foundation Graduate Research Fellowship (faculty mentor to ED, awarded in 2019)

ASU Bidstrup Fellowship (faculty nominator and mentor to CS, awarded in 2017)

American Psych-Law Society Access Path to Psych & and Law Experience Scholarship (\$3,000 each)

2019: EL & AV  
2017: CS  
2016: RV

New College Undergraduate Inquiry & Research Experience (NCUIRE) Awards (range \$625-\$3000)

2020-2021 Fellow Award: EM  
*Implications of bias in forensic fingerprint examiners' judgments*

Spring 2020 Team: JB, RM, SS, AV  
*Jury deliberation project: Are jurors calibrated to evidence strength?*

2019-2020 Scholar Award: EM  
*Bias and the bias blind spot in forensic latent print experts' judgments*

Fall 2019 Research Assistant Award: RM  
*Jury deliberation project: Are jurors calibrated to evidence strength?*

Spring 2019 Team Award: EF, EM, RM, JP  
*Calibration in court: Jurors' use of scientific information*

Fall 2017 Research Assistant Award: RV  
*Perceptions of bias in forensic expert judgments in the legal system*

Summer 2017 Fellow Award: RV  
*Perceptions of bias in forensic expert judgments in the legal system*

Spring 2017 Research Assistant Award: CS, *The effects of insanity verdict options and instructions on juror decisions in criminal responsibility cases*

Spring 2017 Research Assistant Award: RV  
*Forensic scientists' perceptions of human factors in forensic science*

Fall 2016 Team Award: JH, HG, CS, RV  
*Can direct examination sensitize jurors to the scientific validity of expert testimony?: Research as part of the open science "Preregistration Challenge"*

Spring 2016 Team Award: HG, JH, SM, RV  
*The effects of clinical judgment, structured professional judgment, and actuarial expert testimony on juror decision making and understanding of evidence*

**OTHER RESEARCH LAB MENTORSHIP**

- I have mentored students in my lab (1 postdoc, 3 PhD, 6 MS, 1 law, & 18 undergrad students).
- My postdoc moved on to an academic position in England. My M.S. students have moved on to PhD programs (McGill U, U of Illinois, U. Southern MS) and jobs (audience support analyst in industry, psychology teacher at a public school). My undergraduate students have moved on to various graduate programs, law schools, and jobs (e.g., AZ Attorney General's Office, Phoenix Police Department).
- Hosted & mentored an undergraduate scholar from University of Arizona (AM, Summer 2018)
- Hosted & mentored an undergraduate scholar from Mt. Holyoke College (MI, Summer 2016)
- Hosted & mentored junior visiting psychology-law scholar from Switzerland (CP; Spring 2016).
- Students earned grant proposals (ED & KM: AP-LS Grants-in-Aid Award).
- Mentored in *Law and Human Behaviour's* student editorial mentorship program (2019-2020)

**SELECTED MEDIA COVERAGE**

- 2020 Psychological assessments in legal contexts: Are courts keeping “junk science” out of the courtroom?  
This paper was competitively selected for a special press briefing during the American Association for the Advancement of Science (AAAS) annual conference in Feb. 2020. The publisher of the paper (the Association for Psychological Science) coordinated with AAAS to publish at the same time as the press briefing. The work subsequently received widespread media attention, including by the [Associated Press](#), and was covered in many places, including:
- Newspaper stories in more than 500 international outlets, including *The New York Times*, *Washington Post*, *Washington Times*, *Toronto Star* (largest Canadian newspaper), *Dagens Nyheter* (largest Swedish newspaper), *U.S. News and World Report*, and local newspapers in more than 30 U.S. states (e.g., *Minneapolis Star-Tribune*, *Boston Herald*, *Kansas City Star*, *San Francisco Chronicle*).
  - Podcasts: National Public Radio’s (NPR) Short Wave science podcast (forthcoming), NPR’s Hidden Brain podcast (forthcoming), *The Economist’s* Babbage podcast (forthcoming), *Excited Utterance* (a podcast focusing on scholarship on evidence law and proof, forthcoming)
  - News Magazines: [Wired Magazine](#), [New Scientist](#) (British), *The Atlantic* (forthcoming), *Der Spiegel* (German, forthcoming)
  - Television: ABC National News and local television news stations in at least 20 U.S. states. Also covered internationally, such as by CTN News (Canadian Television Network, Canada’s largest and highest-rated network, and the Toronto City News). PBS Horizon (forthcoming).
  - Radio: [NPR Phoenix Affiliate \(KJZZ\)](#), dozens of local stations across the U.S., and several Canadian stations (e.g., News 1130 in Vancouver, BC; 660 News in Calgary, AL; 680 News in Toronto, ON)
  - Blogs: [Forensic Psychology](#), [PsychCentral](#), [Medical Daily](#), [Genetic Literacy Project](#), [IFL Science](#).
- 2018 AZ Central / Arizona Republic Newspaper (12/14/2018), “[This Program For Mentally Ill Defendants Mostly Focuses on Declaring Them Fit For Trial.](#)”
- 2017 Bloomberg BNA (8/31/17), “[Gender Gap for Female Experts Won’t be Easily Narrowed.](#)”
- 2017 Bloomberg BNA (8/28/17), “[Attorneys Faulted for Scarcity of Female Expert Witnesses.](#)”
- 2017 Nebraska Today (5/11/17), “[I think I know: How Institutions Can Build \(or Rebuild\) Trust.](#)”
- 2016 ASU Now (2/25/16), “[Implicit bias: When forensic experts are swayed by adversarial system.](#)”
- 2011 APA *gradPSYCH Magazine* (3/2011), “[Class act: Crime and Punishment](#)” story about my dissertation on bias in forensic evaluations in death penalty cases, 9(2), 36-38.

**CLINICAL EXPERIENCE**

Part-time Private Practice (Forensic Psychological Scientists, LLC) 07/2021–present

I maintain a small private practice in which I do a few forensic evaluations a year. I take cases involving adults and specialize in assessments related to Competence to Stand Trial, Mental State at Time of Offense (Criminal Responsibility), Violence Risk, Aid-in-Sentencing, and Civil Torts alleging psychological or emotional harm.

Settings:

- Public sector inpatient hospital (state hospitals, maximum security forensic hospitals)
- Public sector outpatient (hospital-based and university-based clinics)
- Correctional (corrections-operated jails, prisons, and secure hospitals)
- Court clinics and juvenile court (screening evaluations conducted in courthouses)
- Private practice (assisted with and observed private forensic evaluations)

Types of clinical evaluations conducted across various settings:

- General diagnostic, competency to stand trial, criminal responsibility, aid-in-sentencing, violence risk, problematic sexual behaviour risk, civil commitment, disability, fire-setting risk, suicide risk, post-conditional employment evaluations for police officers, child custody, child protection

Individual and group psychotherapy provided across various settings. Special treatment interests in:

- Dialectical Behaviour Therapy for people with symptoms of Borderline Personality Disorder
- Competency Restoration treatment for forensic populations adjudicated Incompetent to Stand Trial

## Glossary

The following terms appear in ***bold italicized*** text in the body of the report and are defined here:

***Accuracy*** – How often a method or subjective reasoning process results in a correct opinion or conclusion.

***Behavioural profile*** – An investigative technique used by law enforcement, psychologists, consultants, and academics to predict or approximate the personality patterns, behaviours, and demographic characteristics of undetected offenders from characteristics of offences and victims.

***Best practice*** – An aspirational and optimal, but non-enforceable level of practice that exceeds the minimum *Standards of practice*.

***Bias*** – Any systematic factor that determines judgment other than the truth.

***Commission*** – Joint Federal/Provincial Commission into the April 2020 Nova Scotia Mass Casualty, also referred to as the Mass Casualty Commission.

***Field validity*** – Whether a tool or method is *Accurate*, *Repeatable*, and *Reproducible* under routine practice conditions typical of real-world work. Field validity should be empirically demonstrated rather than assumed.

***Forensic psychological assessment*** – A form of *Psychological assessment* undertaken in a legal context to address legal, contractual, or administrative matters.

***Foundational validity*** – Whether a tool or method is, in principle, *Accurate*, *Repeatable*, and *Reproducible*. Foundational validity should be empirically demonstrated rather than assumed.

***Interrater reliability*** – see *Reproducibility*.

***Proficiency*** – A practitioner’s ability to apply a *Foundationally valid* tool or method to come to the expected outcome for the tool or method itself (and ultimately, an accurate opinion).

***Psychological assessment*** – An evaluation conducted to assess a person’s prior, current, or future emotional, behavioural, or cognitive functioning.

***Psychological Autopsy*** – A method used to clarify mode of death in equivocal cases by investigating psychological factors surrounding the death and the deceased. Capitalized as a proper noun in this report in reference to the document titled “Psychological Autopsy” dated 2020-06-03 by Matt Logan, Carl Sesely, and Jamie De Wit, Behavioural Sciences Branch, Royal Canadian Mounted Police (Commission Reference: COMM0021142).

**Psychometric tool** – An approach to measuring people’s emotional, behavioural, or cognitive functioning employing varying degrees of structure and standardization.

**Quality assurance** – A management method involving administrative and procedural standards to prevent mistakes and avoid problems in service or product delivery.

**Repeatability** - Probability that a method or practitioner consistently produces the same results when used to analyze the same materials on subsequent occasions.

**Reproducibility** – Probability that a method consistently produces the same results when used by different practitioners to analyze the same materials.

**Risk assessment** - An evaluation conducted to identify, analyze, and mitigate the effects of potential future events, used in psychology to evaluate a person’s propensity to engage in a future behaviour of interest and strategies for managing those risks.

**Standards of practice** – The minimum level of practice required in a field, such as laid out in legal or administrative rules and ethics codes, and which may be enforceable.

**Structured actuarial assessment** - A form of psychological evaluation based on information derived from formalized psychometric tool(s) with statistically determined rules for what particular values or scores mean on the measure(s) and how those values should be interpreted.

**Unstructured clinical judgment** – A form of psychological assessment that tends to be subjective, flexible, and intuitive and is based on the practitioner’s clinical reasoning rather than psychometric tools.

**Validity as Applied** - Whether a *Foundationally valid* tool or method is, in practice, *Accurate*, *Repeatable*, and *Reproducible*. This can be established via *Field validity* and *Proficiency*.

## I. Representations to the Commission

1. The undersigned **Kristy Martire** and **Tess Neal** make the following representations to the Commission, as required per the Nova Scotia Civil Procedures Rule 55.04 1 a-e:
  - a) The expert is providing an objective opinion for the assistance of the Commission, even if the expert is retained by a party;
  - b) The witness is prepared to testify at the trial or hearing, comply with the directions of the Commission, and apply independent judgment when assisting the commission;
  - c) The report includes everything the expert regards as relevant to the expressed opinion and it draws attention to anything that could reasonably lead to a different conclusion;
  - d) The expert will answer written questions put by parties as soon as possible after the questions are delivered to the expert;
  - e) The expert will notify each party in writing of a change in the opinion, or of a material fact that was not considered when the report was prepared and could reasonably affect the opinion, as soon as possible after arriving at the changed opinion or becoming aware of the material fact.

Associate Professor

## II. Our Opinion

2. In our opinion, the **Psychological Assessment**<sup>1</sup> under consideration by the **Commission** (specifically, the **Psychological Autopsy/Behavioural Profile/Risk Assessment**)<sup>2</sup> is best described as “somewhat” consistent with the eight **best practice** considerations for rigorous **forensic psychological assessment** described in Part 1 of our report to this Commission (dated 8 March 2022). We formed this conclusion based our qualitative assessment of the Psychological Autopsy using the 108 evaluative questions described in Part 1 of our report. Although most of the best practice items were coded as “not at all” addressed, some of them were somewhat addressed, and thus we conclude that the assessment is overall “somewhat” consistent with the best practices.
  
3. Specifically, 76 of the 108 items were coded as “not at all” present in the Psychological Autopsy; 22 were “somewhat” present; 5 were “definitely” present; 3 could not be coded; and 2 were not applicable. Of note, the 5 “definitely” present items were in the bias section in which the direction was reversed as compared to the other items. That is, these 5 “definitely” codes reflect negatively on the Psychological Autopsy rather than positively. In sum, 81 of the 103 (78.6%) items that could be coded were rated as negatively as the coding allowed for regarding best practices in forensic assessment in the Psychological Autopsy.

---

<sup>1</sup> Terms in **bold italics** are defined in the Glossary.

<sup>2</sup> The referral question that the psychological assessment report addressed was not clearly defined. It appears to have been in part a Psychological Autopsy, in part a retrospective Behavioural Profile, and in part a retrospective Risk Assessment. In this report, we refer to it primarily as “the Psychological Autopsy,” as that is the title of the report.

4. Overall, we (Martire and Neal) independently agreed how to code 76 of the 108 items (70.4%). The coding for the remaining items was resolved through discussion. Detailed information about our independent (initial) and integrated (final) coding is available on our [Open Science Framework](#) webpage associated with this report.<sup>3</sup> Further details about our methods and coding process, including an assessment of its **interrater reliability**, appear in the [Evaluating the Validity of Our Approach](#)<sup>4</sup> section of this report.
5. In the process of using the 108 questions to evaluate the Psychological Autopsy for this report, we also identified nine additional best practice issues that were not adequately captured by our original 108 questions. These additional items relate to communication practices. Because all of these new issues related to communication, we broadened Best Practice #5 (previously “Opinion Expression”) to include “Communication of Data and Opinion.” In this Part 2 report, those new questions are labeled Q109–Q117 and appear in the subsection [9. New Issues](#) under the III. Basis for Our Opinion section to make it clear what is new since our Part 1 report for the Commission. However, we conceptualize these new items as part of Best Practice #5.<sup>5</sup>

---

<sup>3</sup> Available at [https://osf.io/brz2c/?view\\_only=7ffe2fa7325144fd8cf40e6f23b35302](https://osf.io/brz2c/?view_only=7ffe2fa7325144fd8cf40e6f23b35302).

<sup>4</sup> Text appearing in *underlined italics* indicates a linked cross-reference to another part of this report. Ctrl+Click on the underlined text to follow.

<sup>5</sup> We posted on the Open Science Framework an updated excel file template of the new questions embedded with Best Practice #5. In this new template, the order of questions changed to accommodate the new additions. The new template was not used in this analysis but rather generated *from* it. We used the original template as submitted with Part 1 of this report to analyze the Psychological Autopsy.

### III. Basis for Our Opinion

6. In the following sections of our report, we discuss the Psychological Autopsy in reference to the eight best practices for rigorous forensic psychological assessments described in Part 1, and the 108 example questions provided to assist the Commission in evaluating a psychological autopsy or behavioural profile. The method we use in Part 2 is described in detail in the [Evaluating the Validity of Our Approach](#) section of this report and resulted in a classification describing the extent to which each of the 108 items was present in the Psychological Autopsy: “not at all” (coded as “0” in the accompanying coding records accessible on the [Open Science Framework](#)<sup>6</sup>), “somewhat” (coded as “1”), “definitely” (coded as “2”), and “not applicable” or “cannot code without breaking blind” (coded separately).
7. We note that it would be inappropriate to simply add up the scores for the items to derive a measure of adherence to best practices. This is for two reasons. The first is that there is some overlap between the questions, so summing the values would result in double counting. Second, the questions are designed to be used qualitatively – to provide insights about areas of strength and weakness – rather than quantitatively.

#### 1. Foundational Validity

8. Questions (Q) 1–9 address best practices relating to **foundational validity** in general terms, while Q10–Q16 specifically address **accuracy**, Q17–Q21 address **repeatability**, and Q22–Q27 address **reproducibility**.

---

<sup>6</sup> Available at [https://osf.io/brz2c/?view\\_only=7ffe2fa7325144fd8cf40e6f23b35302](https://osf.io/brz2c/?view_only=7ffe2fa7325144fd8cf40e6f23b35302).

9. In relation to Q1–Q9, six of the nine items (66.7%) were “not at all” addressed in the report. Specifically, the authors did not at all:
- Provide evidence that the method or process used in the report had been measured (Q1).
  - Refer to empirical studies showing the methods to be accurate, repeatable, and reproducible at levels appropriate to the intended application (Q2).
  - Support each assertion made in the report by citing research or professional literature (Q5).
  - Provide data about the psychometric performance of their methods (Q6).
  - Summarize what is known about the performance of the tools used in their assessment (Q7).
  - Provide evidence about the validity of their approach by referring to reliability, generalizability, standard errors, and other relevant psychometric indices (Q8).
10. The remaining items (Q3, Q4, Q9) were “somewhat” addressed. The authors:
- Cited some studies to support some of their methods and processes, though they were not necessarily empirical studies (Q3).
  - Relied on one psychometric test as part of their evaluation and cited the manual for that test but did not directly cite the scientific studies specific to the intended use (Q4).
  - Relied on a **psychometric tool** (the Psychopathy Checklist-Revised; PCL-R) with generally favorable measurement properties (Q9).
11. Prior to discussion and resolution of differences, Martire and Neal independently agreed in their classification of seven out of nine of these items (77.8%). All disagreements were satisfactorily resolved through discussion. Interrater agreement prior to resolution was Krippendorff alpha<sup>7</sup> = 0.59 for the basic foundational validity items. This level of agreement is considered poor, on a scale in which 0.0 indicates no agreement, 1.0 indicates perfect agreement, and -1.0 indicates perfect

---

<sup>7</sup> Hayes, A.F. & Krippendorff, K. (2007). Answering the call for a standard reliability measure for coding data. *Communication methods and measures*, 1(1), 77–89. Available at [https://www.tandfonline.com/doi/pdf/10.1080/19312450709336664?casa\\_token=3j1BgsuDin0AAA:15r-jcHGcCSWFKxeqxI36Mm83X3IMr6SXLot6-cE\\_N3VTgHcMOvgyh84Rvq6nKz6Fj8ieL0uCV1F](https://www.tandfonline.com/doi/pdf/10.1080/19312450709336664?casa_token=3j1BgsuDin0AAA:15r-jcHGcCSWFKxeqxI36Mm83X3IMr6SXLot6-cE_N3VTgHcMOvgyh84Rvq6nKz6Fj8ieL0uCV1F).

disagreement.<sup>8</sup> Further details about our methods and coding process appear in the [Evaluating the Validity of Our Approach](#) section of this report.

#### ACCURACY

12. In relation to Q10–Q16 about accuracy, six of the seven items (85.7%) were “not at all” addressed in the report. The authors did not at all:
- Provide credible evidence that psychological assessments like theirs are likely to produce objectively correct results (Q10).
  - Cite published empirical studies showing assessments like theirs can be highly or at least sufficiently accurate (Q11).
  - Provide credible evidence that there are methods for completing assessments like theirs that are likely to produce objectively correct results (Q12).
  - Cite published empirical studies showing particular methods or tools result in highly or at least sufficiently accurate assessments like theirs (Q13).
  - Complete an assessment that, in principle, is likely to have higher rather than lower accuracy (e.g., by examining a current mental state of a living person) (Q15).
  - Provide evidence about the accuracy of assessments of past mental states (Q16).
13. The remaining item (Q14) was “somewhat” addressed because the authors did rely on a **structured actuarial assessment** tool (the PCL-R), but other unstructured methods were also used, and the appropriateness of this tool for the task at hand was not examined.
14. Prior to discussion and resolution of differences, Martire and Neal independently agreed in their classification of all of these items (100.0%). Interrater agreement was

---

<sup>8</sup> Krippendorff, K. (2004). *Content analysis: An introduction to its methodology*. Thousand Oaks, CA: Sage.

Krippendorff alpha<sup>9</sup> = 1.0 for the foundational validity accuracy items. This level of agreement is considered perfect.<sup>10</sup>

#### REPEATABILITY

15. Q17–Q21 addressed repeatability. Four of the five items were “not at all” addressed in the report. The authors did not at all:

- Provide credible evidence that the same practitioner given the same information would be able to produce the same type of psychological assessment result on a second occasion (Q17).
- Refer to published empirical studies showing that the same practitioner can produce highly or at least sufficiently consistent assessments of the type completed (Q18).
- Describe standardized methods or tools that could in principle assist a practitioner to produce the same result if given the same information on a second occasion (Q19).
- Refer to published empirical studies showing that particular methods or tools generally result in the same practitioner producing highly or at least sufficiently consistent psychological assessments of this type (Q20).

16. The remaining item (Q21) was “somewhat” addressed because the use of the PCL-R adds an objective, standardized, and structured element to the methods used by the practitioner, but the PCL-R was one component of a broadly unstandardized assessment process relying primarily on *unstructured clinical judgment*.

17. Prior to discussion and resolution of differences, Martire and Neal independently agreed in their classification of four out of five of these items (80.0%). The point of disagreement was satisfactorily resolved through discussion. Interrater agreement

---

<sup>9</sup> Hayes & Krippendorff, 2007.

<sup>10</sup> Krippendorff, 2004.

prior to resolution was Krippendorff alpha<sup>11</sup> = 0.61 for the foundational validity repeatability items. This level of agreement is considered poor.<sup>12</sup>

#### REPRODUCIBILITY

18. Q22–Q27 addressed reproducibility. Four of the six items were “not at all” addressed in the report (66.7%). The authors did not at all:

- Provide credible evidence that different practitioners given the same information would be able to produce the same type of psychological assessment result (Q22).
- Refer to published empirical studies showing that different practitioners can produce highly or at least sufficiently consistent assessments of the type completed (Q23).
- Describe standardized methods or tools that could in principle assist different practitioners to produce the same result if given the same information (Q24).
- Refer to published empirical studies showing particular methods or tools generally result in different practitioners producing highly or at least sufficiently consistent psychological assessments of this type (Q25).

19. The remaining items (Q26 and Q27) were “somewhat” addressed. The authors:

- Used the PCL-R, which is a tool that adds an objective, standardized, and structured element to the methods and could therefore improve standardization between practitioners. However, the PCL-R was just one component of a broader unstandardized assessment approach (Q26).
- Provided some information to justify the threshold for psychopathy cut-offs as determined by the PCL-R but did not provide information about the thresholds for diagnosing other psychological disorders (e.g., Antisocial and Borderline Personality Disorders) and did not justify or state thresholds for the forensically-relevant outcome (Q27).

20. Prior to discussion and resolution of differences, Martire and Neal independently agreed in their classification of five out of six of these items (83.3%). The point of disagreement was satisfactorily resolved through discussion. Interrater agreement

---

<sup>11</sup> Hayes & Krippendorff, 2007.

<sup>12</sup> Krippendorff, 2004.

prior to resolution was Krippendorff alpha<sup>13</sup> = 0.72 for the foundational validity reproducibility items. This level of agreement is considered low but adequate.<sup>14</sup>

## 2. Validity as Applied

21. Questions 28–34 address the **proficiency** component of **validity as applied**. Q35–Q49 address the **field validity** component.

### PROFICIENCY

22. Overall, in relation to proficiency (Q28–Q34), seven out of seven items were “not at all” addressed in the report (100.0%). Specifically, the authors did not at all:
- Provide credible evidence that their own psychological assessments are likely to produce objectively correct results (Q28).
  - Provide credible evidence of participation in or the results of testing, where the ground-truth was known and showing their psychological assessments are highly or at least sufficiently accurate (Q29).
  - Provide credible evidence that their psychological assessments are materially better than laypeople (e.g., that their opinions are more accurate than novices) (Q30).
  - Describe earned credentials that require demonstration of relevant proficiencies (e.g., objectively correct administration of particular psychometric tools, board certification by the American Board of Professional Psychology or other highly regarded board for which a requisite qualification is criterion-referenced, high-quality administration of psychological assessments; Q31).
  - Detail their qualifications, certifications, authorizations, etc. that are demonstrably associated with highly or at least sufficiently accurate psychological assessment results (Q32).
  - Provide credible evidence of operating in an environment where they receive routine, systematic, and objectively correct feedback about the accuracy of their performance (Q33).
  - Provide credible evidence of their proficiency, such as those detailed in the above questions, beyond simply asserting their “years of experience” (Q34).

<sup>13</sup> Hayes & Krippendorff, 2007.

<sup>14</sup> Krippendorff, 2004.

23. Prior to discussion and resolution of differences, Martire and Neal agreed in their coding of six out of seven items (85.7%) in the proficiency component of validity as applied. The point of disagreement was satisfactorily resolved through discussion. Interrater agreement prior to resolution could not be calculated for the proficiency items. This is because there was no variability in one of the coder's ratings (i.e., all of the items were coded by one rater as "0" ("not at all present"). Further detail about how validity is calculated and why the lack of variability in the data affected interrater reliability is provided in the [Evaluating the Validity of Our Approach](#) section of this report.

#### FIELD VALIDITY

24. Overall, in relation to field validity (Q35–Q49), twelve of fifteen items were "not at all" addressed in the report (80.0%), two were "somewhat" addressed in the report, and one was "not applicable" to the report. Specifically, the authors did not at all:
- Provide credible evidence that psychological assessments conducted under routine practice conditions typical of real-world work are likely to produce objectively correct results (Q35).
  - Refer to published field studies that show psychological assessments are highly or at least sufficiently accurate (Q36).
  - Provide credible evidence that there are methods or tools for completing psychological assessments under routine practice conditions typical of real-world work that produce objectively correct results (Q37).
  - Provide evidence that the methods, process, or tools employed were appropriate for the person and conditions in this case (Q40).
  - Clearly describe using a highly structured method or tool that involves little discretion and is likely to result in repeatable and reproducible psychological assessment (Q41).
  - Employ standardized methods and tools, or provide sufficient detail about their psychological assessment so that they or another practitioner could faithfully reproduce the assessment to reach the same result. Even though the PCL-R was

used, no detail was provided about the approach or on what basis particular items were scored (Q42).

- Explain whether, and if so, why they use the same method in all similar cases or if it varies from case to case (Q43).
- Provide justification or independent support for the approach they took in this case as compared to the approach they took in other cases (Q44).
- Describe whether the conditions of the assessment were similar to those in which any foundational validity studies were conducted, nor provide evidence that the particular administration conditions of the evaluation as they differ from the controlled laboratory studies nevertheless have applied validity (Q45).
- Describe how well the evaluatee fit the characteristics of the normative sample for the norm-referenced psychometric tools used – that is, how well any validity evidence for the tool as established for the sample upon which the tool was created fit for the particular evaluatee in this case (Q46).
- Provide peer-reviewed, published data about the validity of the tool for the population(s) to which the evaluatee belongs (e.g., culturally, ethnically, with regard to gender, age, reading level, language, etc.) (Q47).
- Provide evidence to support their use of a test or method to answer a forensic question for which the test or method was not explicitly designed or validated (Q48).

25. Items (Q38 and Q39) were “somewhat” addressed. The authors:

- Used an empirically supported method or tool in this case that is likely to result in a sufficiently accurate psychological assessment. Specifically, the PCL-R and DSM-5 were used, and both are based on at least some empirical support. But it is not clear the extent to which they are appropriate for retrospective use for deceased persons as they were used in this case (Q38).
- Attempted to use a standardized method to define, analyze, synthesize, combine information, or make inferences in the case through the use of the PCL-R, even though the rest of the evaluation process was unstandardized (Q39).

26. One item (Q49) was “not applicable”:

- A battery of several different psychometric tests was not used as part of the evaluation process in this case, and thus attention to the performance of the battery is not applicable (Q49).

27. Prior to discussion and resolution of differences, Martire and Neal agreed in their

coding of ten out of fifteen items (66.7%) in the field validity component of validity as

applied. All disagreements were satisfactorily resolved through discussion. Interrater agreement prior to resolution was Krippendorff alpha<sup>15</sup> = 0.29 for the field validity items. This level of agreement is considered poor.<sup>16</sup>

### 3. Bias

28. Questions 50–63 address **bias**. Overall, of the fourteen items, five were “definitely” relevant to the report,<sup>17</sup> four were “somewhat” relevant in the report, and five were “not at all” relevant in the report.
29. Specifically, the following items were “definitely” relevant to the assessment:
- The practitioners knowingly worked with or for a party who may have a vested interest in a particular psychological assessment outcome. Specifically, the report appears to be written by employees of the Royal Canadian Mounted Police (RCMP) – an agency that led the critical incident response to the mass casualty (a potential conflict of interest). Members of this agency were also victims in this same critical incident (another potential conflict of interest) (Q50).
  - The practitioners had a conflict of interest regarding an aspect of the case that could lead them to have a vested interest in a particular outcome of the case. This was rated as “definitely” because of the phrase “could lead them” in this item, as it is clear that the process could lead to bias even though we do not know if the outcome was in fact biased. The issues identified in the above item are relevant here, as is the fact that one of the authors of the report is a co-author of Dr. Robert Hare, the author of the PCL-R, who received royalties from the use of the instrument. Though this last issue might not be a conflict of interest, it could have been acknowledged as a potential conflict of interest by the report authors (Q51).
  - The practitioners operated in a role or had access to information that might increase the chances of some form of cognitive bias (e.g., adversarial allegiance, hindsight bias, confirmation effects). For example, the report authors are employees of the Royal Canadian Mounted Police – the same agency that policed and investigated the critical incident and its aftermath – and they also knew details about the outcome of the events prior to undertaking the assessment (Q53).

<sup>15</sup> Hayes & Krippendorff, 2007.

<sup>16</sup> Krippendorff, 2004.

<sup>17</sup> The framing of the questions in the Bias section was different from other sections of the report. In the context of bias, our questions sought information about the potential for bias, and so higher scores/“definitely” classifications indicate areas of concern rather than strengths.

- The report authors completed their psychological analysis knowing the eventual outcome of the events in question – a situation that increases the risk of hindsight bias, confirmation effects, and other potential psychological biases. This report was written retrospectively, after the events in question unfolded. The report explicitly considered the events themselves and how they unfolded along with their outcomes while simultaneously completing the psychological analysis. There appears to have been no attempt to reduce the potential effects of hindsight bias, such as blinding to some of the details of the outcomes or having the evaluation completed by someone who did not know the details of the outcomes (Q54).
  - Information available at earlier stages of the psychological assessment (e.g., outcome of the case, contact and discussions with other employees of the policing agency employing the evaluators) could have either knowingly or unknowingly influenced the perception, attention, evaluation, or interpretation of information considered at later stages of the psychological assessment (Q60).
30. The following items were “somewhat” present. The authors somewhat:
- Engaged in some partisan presentation of unrepresentative, incomplete, or inaccurate evidence that could mislead finders of fact. Specifically, while we cannot verify the accuracy of information given that we only have access to this report and no other information about the case, there is evidence of partisanship in that the report appears to be aligned with victims (e.g., being dedicated to the member of their agency who was killed in the critical incident, as well as to the memory of all those who were murdered) and contains highly emotive language, which is unusual for formal forensic psychological assessment reports (Q52).
  - Approached the psychological assessment with some belief or expectation about its likely outcome. Specifically, the authors are employees of the same agency that the public may see as bearing some responsibility for the tragedy unfolding as it did. The agency’s employees conducting this evaluation likely had an expectation that the report would find that the events were “difficult to predict,” which is how the conclusion of the report reads. In addition, knowing that there were 22 victims killed would be likely to establish an expectation of some psychological trait or problem with a person who could undertake such an act (Q55).
  - Disclosed what they knew, from whom, and when they knew it in the context of their psychological assessment. The report does refer to some sources of particular information but does not include timelines or when the information was uncovered or dated, and sources of information are inconsistently attributed (Q57).
  - Relied on structured decision processes (e.g., actuarial or structured clinical judgment methods rather than unstructured methods) to reduce discretion and try to reduce the possibility of bias affecting their judgments. Specifically, the authors used the Psychopathy Checklist-Revised (PCL-R) in this case, in addition to other unstructured methods. But whether the PCL-R’s measurement properties

fit for this context is less clear (i.e., file-based scoring of the PCL-R in a retrospective behavioural analysis) (Q62).

31. The remaining items (Q56, Q58, Q59, Q61, and Q63) were “not at all” present. The authors did not:

- Describe the information they were provided and instructions they were given by the party commissioning their work to help understand how and when contextual information might have influenced their decision-making. While the authors describe the broad outline of the sources they relied upon, the referral question and instructions provided by the referent were not communicated. Nor were the data provided by the referent: there is a list of exhibits, but it is vague and difficult to infer its potential effects on decision making (Q56).
- Document efforts to avoid biasing information, such as through blinding procedures, linear sequential unmasking, or case management procedures when information with known biasing potential was present (Q58).
- Differentiate between “task relevant” and “task irrelevant” information or prioritize the “task relevant” information in what they sought and relied on in their decision processes and conclusions (Q59).
- Rely on any standard operating procedures or practice guidelines to introduce structure, reduce discretion, and try to reduce the possibility of bias affecting their judgments (Q61).
- Describe employing any other methods or procedures for managing or mitigating cognitive bias in their psychological assessment, such as seeking independent peer review, stating rival hypotheses and counterfactuals, or using archival self-monitoring (Q63).

32. Prior to discussion and resolution of differences, Martire and Neal agreed in their coding of nine out of fourteen items (64.3%) in the bias section. All disagreements were satisfactorily resolved through discussion. Interrater agreement prior to resolution was Krippendorff alpha<sup>18</sup> = 0.55 for the bias items. This level of agreement is considered poor.<sup>19</sup>

---

<sup>18</sup> Hayes & Krippendorff, 2007.

<sup>19</sup> Krippendorff, 2004.

#### 4. Quality Assurance

33. Q64–Q72 address **quality assurance** best practices. Overall, eight of nine questions were “not at all” addressed in the report (88.9%), and one could not be coded.
34. Specifically, the authors did not at all:
- Identify and follow administrative or procedural **standards of practice** or identify and report using best practices to ensure the quality of their psychological assessment (Q64).
  - Cite and rely on authoritative practice guidelines (e.g., those published by the Canadian Psychological Association, Australian Psychological Society, or American Psychological Association with regard to psychological assessment practice in general and forensic assessment practice in particular) to try to improve the quality of their assessment (Q65).
  - Report systematic monitoring or measurement of their performance in psychological assessment, alongside a comparison against a target goal, with an associated feedback loop to reduce error in their work (Q66).
  - Provide evidence that they are appropriately licensed, credentialed, and in good standing in their profession (Q67).
  - Identify and follow ethical rules, codes of conduct, and legal procedural and evidence admissibility rules that offer guidance and suggestions for how psychologists should behave in their forensic psychological assessment work. The authors might have followed their relevant ethical rules, codes of conduct, legal rules, but they are not identified or discussed in the report (Q68).
  - Offer evidence of credentialing (e.g., board certification by the American Board of Forensic Psychology or the American Board of Police & Public Safety Psychology) or certification by law or policy (e.g., state or jurisdictional models) in forensic psychological assessment or whether these certification processes require proficiency testing (Q70).
  - Appear to encourage quality assurance assessment of their own work, such as seeking peer review of their evaluation, report, or testimony or by carefully detailing the limitations and assumptions as well as alternative views and disagreements associated with their assessment (Q71).
  - Cite and rely on the Standards for Educational and Psychological Testing. Note that it is not a requirement for psychological assessments to cite these standards, but they are an excellent resource and seeing a report cite and rely on them would be an indicator of quality assurance (Q72).
35. Finally, this item could not be coded without us breaking our blind:

- We cannot code whether the practitioner’s behaviours in this case met at least the minimum standards of practice in the field, as laid out in and potentially enforceable under ethics codes, because the report authors do not specify their qualifications or professional memberships by which ethics codes they might be bound. For example, if they are licensed as a psychologist in a particular jurisdiction, they are bound by the rules of that particular jurisdiction. If they are members of the Canadian Psychological Association, they are bound by the relevant Ethics Code. We might be able to discover the professional qualifications and memberships of the authors through searching for information about the authors, but we did not do so in order to preserve our method and approach to this current report in which we did not expose ourselves to any information outside of that which we have systematically described in this process (Q69).

36. Prior to discussion and resolution of differences, Martire and Neal agreed in their coding of eight out of nine items (88.9%) in the quality assurance section – it was the “cannot code” item that we had some trouble with initially. The disagreement was satisfactorily resolved through discussion. Interrater agreement prior to resolution was Krippendorff alpha<sup>20</sup> = 0.49 for the quality assurance items. This level of agreement is considered poor.<sup>21</sup>

#### *5. Opinion Expression/Communication of Data and Opinion*

37. Q73–Q80 address the communication of data and opinions. Overall, four of the eight items were “somewhat” addressed in the report (50.0%). To some extent the authors:

- Referred to conventions for reporting aspects of their assessment. Specifically, the PCL-R, Diagnostic and Statistical Manual of Mental Disorders Fifth Edition (DSM-5) and International Classification of Diseases 11th Revision (ICD-11) all include proscribed forms of expression relating to the diagnosis and classification of mental illnesses and disorders. However, the authors did not describe the generally accepted conventions associated with the use of these tools or clearly apply them (Q73).

---

<sup>20</sup> Hayes & Krippendorff, 2007.

<sup>21</sup> Krippendorff, 2004.

- Provided definitions of the terms reported in their assessment (e.g., “displacement homicides”<sup>22</sup>), but many terms and acronyms were not defined or explained. For example, the terms “active shooter,” “causative” versus “contributing” factors,<sup>23</sup> and “Machiavellianism”<sup>24</sup> were not defined. Acronyms including DSM-5, ICD-11, HRP, and CRA were also not explained (Q75).
  - Used expressions of uncertainty when communicating results, inferences, and opinions (e.g., “it is highly likely that...,” “there are indications that...,” “[EVALUEE]<sup>25</sup> likely considered...”). However, the report also contains numerous examples of definitive forms of expression (e.g., “He did not ‘snap’...,” “He was not mentally ill...,” “There are always pre-incident indicators and warning signs to these incidents...,”<sup>26</sup> “We have not, to date, seen the phenomenon with both parents, but it exists”<sup>27</sup>) (Q78).
  - Provided modest and qualified conclusions (see Q78 above). But other times the authors used a level of certainty that is not commensurate with scientific methods or forensic psychological assessments (e.g., “The ‘Snap Theory’ is truly a fallacy...,” “...certainly not the case here...,” “His ability to dehumanize and see a person as a ‘piece of meat’ would simplify his ability to calmly execute another human being”) (Q79).
38. Three items (Q74, Q76, and Q77) were “not at all” addressed by the authors, who did not:
- Provide information about whether the reporting conventions or methods associated with standardized tools had been empirically tested to establish their efficacy (Q74).
  - Explain why they chose particular terminology to express their results, opinions, and conclusions (Q76).
  - Reproduce reporting scales, proscribed terminology, or explain that the information could not be reproduced due to copyright (Q77).
39. One item in this section (Q80) was classified “not applicable” (coded as “N/A”) because the authors did not rely on a battery of several psychometric tests; they used only one psychometric test, the PCL-R.

---

<sup>23</sup> Logan et al., 2020, 6.

<sup>24</sup> Logan et al., 2020, 44.

<sup>25</sup> We have used descriptive labels rather than reproducing the names of persons throughout.

<sup>26</sup> Logan et al., 2020, 40.

<sup>27</sup> Logan et al., 2020, 46.

40. Prior to discussion and resolution of differences, Martire and Neal independently agreed in their classification of three of the eight items (37.5%). All points of disagreement were satisfactorily resolved through discussion. Interrater agreement prior to resolution was Krippendorff alpha<sup>28</sup> = 0.07 for the opinion expression items. This level of agreement is considered poor.<sup>29</sup>

#### 6. Limitations and Assumptions

41. Limitations and assumptions are addressed in Q81–Q96. Of these sixteen items, twelve were “not at all” addressed in the report (75.0%). Specifically, the authors did not:

- Disclose any assumptions they relied on when completing their assessment or state that there were no assumptions (Q83).
- Provide any information about the likelihood, cause, or magnitude of disagreement between practitioners who provide the same type of assessment (Q86).
- Provide any information about the likelihood, cause, or magnitude of disagreement across repeated applications of the same techniques (Q87).
- Disclose deviations from standard operating procedures or documented and validated methods (Q88).
- Explicitly consider the implications of deviations from best practice for the validity of their approach and conclusions (Q89).
- Acknowledge the potential for bias and transparently describe the steps taken to mitigate those risks (Q90).
- Provide information to understand limitations regarding the intent, imprecision, and interpretation of uncertain terms (Q91).
- Describe or account for limitations to the quality of the data they relied on in their assessment (Q92).
- Disclose data that is inconsistent with or disconfirming of their opinions or explicitly state there was no such data (Q93).

<sup>28</sup> Hayes & Krippendorff, 2007.

<sup>29</sup> Krippendorff, 2004.

- Describe case-specific factors that may decrease the quality or value of their assessment in this case or explicitly state that no such factors were present (Q94).
- Describe the likely impact of the evaluatee being deceased on the quality and veracity of the information available for conducting the assessment (Q95).
- Declare limitations associated with the quality of information obtained from collateral sources like friends, family, survivors, or archival records.

42. The remaining items (Q81, Q82, Q84, and Q85) were “somewhat” addressed. The

authors:

- Included a statement that raises the possibility of weaknesses associated with the assessment and prediction of future violence:

Assessment and the prediction of potential violence entails evaluating observable individual traits and situational indicators that are known to be consistent with previous violent acts. It requires deductions and subjective opinions and as such, violence may be over predicted or under predicted in some cases. Risk for violence is a dynamic phenomenon. It changes with variations in the offender’s thinking and circumstances. The accuracy depends upon the completeness, currency and accuracy of the information provided for analysis.<sup>30</sup>

However, the authors did not explain or explore these limitations for readers, so it is unclear how they apply to the assessment at hand or how significant their implications might be (Q81).

- Disclosed some limitations associated with the assessment and prediction of future violence as quoted above but did not explain how the limitations applied to this specific assessment (Q82; see also Q81 above)
- Provided some information about the limitations of the foundational validity of their approach as quoted above (Q84; see also Q81 and Q82).
- Provided some information about the limitations to the validity as applied of their approach by suggesting that something was unusual about this report and process: “Without the luxury of an interview or recent assessment of [EVALUEE]...”<sup>31</sup> But this statement does not explain what was actually done in this case or how that process was limited by what we infer was the unavailability of an interview or recent assessment (Q85).

43. Prior to discussion and resolution of differences, Martire and Neal independently

agreed in their classification of eight of the sixteen items (50.0%). All points of

<sup>30</sup> Logan et al., 2020, 4, 44.

<sup>31</sup> Logan et al., 2020, 40.

disagreement were satisfactorily resolved through discussion. Interrater agreement prior to resolution was Krippendorff alpha<sup>32</sup> = -0.15 for the limitations and assumption items. This level of agreement is considered poor.<sup>33</sup>

#### 7. Alternative Views or Disagreements

44. Q97–Q104 address alternative views or disagreements. Seven of these eight items were “not at all” addressed in the report (87.5%). The authors did not:

- Refer to any critical scholarship or authoritative commentary relating to the type of assessment they conducted (Q97).
- Consider the implications of relevant critical scholarship for the quality and value of their own psychological assessment (Q98).
- Acknowledge that different practitioners may take a different approach or reach a different conclusion if they were to complete their own assessment of the same case (Q100).
- Acknowledge that there are various perspectives or “schools of thought” on how to complete assessments of this type (Q101).
- Explain why there may be differences between practitioners completing the same assessment or what the implications of those differences are for the quality and value of their own assessment (Q102).
- Offer rival hypotheses or counterfactuals that could be relevant to this case (Q103).
- Acknowledge the realistic possibility of disagreements about the validity of unstandardized assessment approaches compared to highly structured actuarial judgments (Q104).

45. The remaining item (Q99) was “somewhat” addressed because the authors disclosed that some practitioners (investigators) use a PCL-R cut-off score of 25, while noting that the score 30 has also “proven useful.”<sup>34</sup> This suggests there may be differing views about which cut-off to use but doesn’t explain what cut-off is

---

<sup>32</sup> Hayes & Krippendorff, 2007.

<sup>33</sup> Krippendorff, 2004.

<sup>34</sup> Logan et al., 2020, 44.

recommended in the PCL-R manual, what cut-off was used, whether this was best practice, or how any modifications to standard/best practice should be understood by readers.

46. Prior to discussion and resolution of differences, Martire and Neal independently agreed in their classification of six of the eight items (75.0%). All points of disagreement were satisfactorily resolved through discussion. Interrater agreement prior to resolution was Krippendorff alpha = -0.04<sup>35</sup> for the items about alternative views or disagreements. This level of agreement is considered poor.<sup>36</sup>

#### *8. Ethical Obligations and Codes of Conduct*

47. Q105–Q108 address ethical obligations and codes of conduct. Of these four items, only two could be coded based on information contained within the report. Both of these items were “not at all” addressed (50%). Specifically, the authors did not:
- Describe whether they held appropriate licences, accreditation, and/or authorizations as necessary to complete the work described beyond stating their current job role (Q105).
  - Describe whether they maintain memberships of professional organizations and societies that govern the ethical conduct of the work described (Q106).
48. Without knowing more about the authors and the broader reporting/case context, it was not possible for us to determine:
- Whether the practitioners’ work complies with relevant ethical, professional, and licensure requirements (Q107), because we do not know what memberships and/or licences the practitioners hold.
  - Whether legal procedural rules apply to the psychological assessment in this case and therefore whether the assessment complied with those rules (Q108).

---

<sup>35</sup> Hayes & Krippendorff, 2007.

<sup>36</sup> Krippendorff, 2004.

49. Prior to discussion and resolution of differences, Martire and Neal agreed in their coding of two of these four items (50%). All points of disagreement were satisfactorily resolved through discussion. Interrater agreement prior to resolution was Krippendorff alpha<sup>37</sup> = 0.53 for the items about ethical obligations and codes of conduct. This level of agreement is considered poor.<sup>38</sup>

### 9. New Issues

50. When reading and working through the coding for the 108 items regarding the Psychological Autopsy, we identified the following additional items that were not adequately addressed in our original list of questions. Following on from the existing list, we now add questions numbered Q109 to Q117, all relating to Best Practice #5 (Opinion Expression). To accommodate this change, we have broadened this category label to “Communication of Data and Opinion.” We provide a rationale for each new question in turn and consider how each is addressed in the report.<sup>39</sup>

**Q109 Is the forensic referral question clearly identified?**

51. In forensic psychological assessments, the specific psycholegal question to be addressed should be clearly stated.<sup>40</sup> This question should guide the entire assessment process, and the report should be organized to answer that question.

<sup>37</sup> Hayes & Krippendorff, 2007.

<sup>38</sup> Krippendorff, 2004.

<sup>39</sup> We posted on the Open Science Framework an updated Excel file template of the new questions embedded with Best Practice #5. In this new template, the order of questions changed to accommodate the new additions. The new template was not used in this analysis but rather generated from it. We used the original template as submitted with Part 1 of this report to analyze the Psychological Autopsy.

<sup>40</sup> Witt, P.H. (2010). Forensic report checklist. Open Access Journal of Forensic Psychology, 2, 233 – 40, <https://abpp.org/BlankSite/media/Forensic-Psychology-Documents/ABFP-Forensic-Report-Checklist.pdf>.

The question is often defined by regulation, case law, or statute within the jurisdiction where the report is generated, and the evaluator should be clear about what question they are answering so that only relevant information is included in the assessment process and report.

52. In the current case, the purpose of the psychological assessment was never explicitly stated. The report is entitled “Psychological Autopsy,” but includes elements of a retrospective behavioural profile as well as a retrospective risk or threat assessment. Because of this, it is unclear how the analysis and conclusions served the aims of the assessment. For example, it was not clear how some conclusions were relevant to the task at hand:

... there appears to be a complex combination of behaviours and interactions with bystanders that may often occur in the days, weeks, and months leading up to an attack...<sup>41</sup>

**Q110 Does the practitioner use only objective, neutral language in their report?**

53. Ethical requirements,<sup>42</sup> codes of conduct,<sup>43</sup> and critical scholarship<sup>44</sup> all reinforce the importance of actual and perceived impartiality in forensic psychological (and other expert) assessments. Consequently, the language used in reports should be unbiased and neutral rather than emotive and/or judgmental.

<sup>41</sup> Logan et al., 2020, 54.

<sup>42</sup> See, e.g., Canadian Psychological Association. (2017). *Canadian code of ethics for psychologists*, [https://cpa.ca/docs/File/Ethics/CPA\\_Code\\_2017\\_4thEd.pdf](https://cpa.ca/docs/File/Ethics/CPA_Code_2017_4thEd.pdf).

<sup>43</sup> See, e.g., NSW Expert Witness Code of Conduct, Schedule 7, Uniform Civil Procedure Rules, 2005, [http://www5.austlii.edu.au/au/legis/nsw/consol\\_reg/ucpr2005305/sch7.html](http://www5.austlii.edu.au/au/legis/nsw/consol_reg/ucpr2005305/sch7.html).

<sup>44</sup> Grisso, T. (2010). Guidance for improving forensic reports: A review of common errors. *Open Access Journal of Forensic Psychology*, 2, 102–15, <https://www.oajfp.com/blank-8>.

54. The authors of the Psychological Autopsy did not use only objective and neutral language in their report. Some examples of non-objective language include:

The authors of this report are aware of the horrific impact these shootings have had on victims, survivors, families, and communities here in Nova Scotia. We extend our deepest sympathies to those who have suffered. We remain committed to doing everything possible to prevent future attacks. Although much work remains, we present this report as a step towards disrupting those who would seek to inflict mayhem on other communities.<sup>45</sup>

The trigger point or final straw that initiated the rampage was also not the fault of his partner.<sup>46</sup>

There was a storm brewing for many years and the circumstances that created what Maritimers refer to as “the perfect storm” finally struck on April 18/19, 2020.<sup>47</sup>

... amassed the perceived arrows of affliction and insult and turned them inward until they boiled over into rage...<sup>48</sup>

**Q111 Is the report clearly and coherently organized?**

55. Clear communication is a vital component of rigorous forensic psychological (and expert) reporting. Regulators and commentators note that audience understanding can be improved through the use of a logical, coherent, and transparent reporting structure.<sup>49</sup>
56. Some elements of the Psychological Autopsy were designed to improve transparency and facilitate understanding – specifically, the inclusion of a table of contents and associated section headings,<sup>50</sup> as well as the list of materials considered.<sup>51</sup> However,

<sup>45</sup> Logan et al., 2020, 2.

<sup>46</sup> Logan et al., 2020, 6.

<sup>47</sup> Logan et al., 2020, 6.

<sup>48</sup> Logan et al., 2020, 6.

<sup>49</sup> National Research Council. (2009). *Strengthening forensic science in the United States: A path forward*. National Academies Press, <https://doi.org/10.17226/12589>; Grisso, 2010; Witt, 2010; Howes, L.M. & Kemp, N. (2017). Discord in the communication of forensic science: Can the science of language help foster shared understanding? *Journal of Language and Social Psychology*, 36(1), 96–111, <https://doi.org/10.1177/0261927X16663589>.

<sup>50</sup> Logan et al., 2020, 3.

<sup>51</sup> Logan et al., 2020, 5.

there were several elements of the report that were not logical, transparent, or coherent. Some examples include:

- The author's opinion was not clearly labelled as such; instead it appeared under the heading "Abstract."<sup>52</sup>
- Some conclusions were made before the basis for those conclusions was presented. For example, the "well documented" evidence referred to on page 27 was not reported until page 38 of the report under the heading "Relationship History":
 

It is well documented that [EVALUEE] harboured a deep hatred for his parents as a result of the emotional and physical abuse he perceived they had subjected him to as a child.<sup>53</sup>
- Elements of the DSM-5 diagnostic criteria for Antisocial Personality Disorder and Borderline Personality Disorder appear to have been reproduced under the headings "Antisocial Traits" and "Borderline Traits" respectively,<sup>54</sup> but the source of this text and the purpose of their statement was not explained for the reader. This made it difficult to know how the information should be understood.
- The purpose of the analyses under the headings "Similarities/Differences in Comparison with other Mass Shooters"<sup>55</sup> and "Bifurcated Mass Homicide"<sup>56</sup> was not explained.

**Q112 Is every source of information clearly identified and dated to make clear exactly what information was relied upon in the evaluator's judgment process?**

57. Every source of information relied upon in in the assessment process should be clearly labeled and identified concretely (e.g., with title, date, time if relevant), ideally in a clearly labeled "sources of information" section near the beginning of the report.<sup>57</sup> This transparency is important for understanding and evaluating what information the evaluator had (and did not have) in forming their opinion in the case.

<sup>52</sup> Logan et al., 2020, 6.

<sup>53</sup> Logan et al., 2020, 27.

<sup>54</sup> Logan et al., 2020, 39.

<sup>55</sup> Logan et al., 2020, 54.

<sup>56</sup> Logan et al., 2020, 55.

<sup>57</sup> Melton, G.B., Petrila, J., Poythress, N.G., Slobogin, C., Otto, R.K., Mossman, D., & Condie, L.O. (2017). *Psychological evaluations for the courts: A handbook for mental health professionals and lawyers* (4th ed.). Guilford Press; Grisso, 2010.

This is important because differences between evaluators can arise when different people form opinions on the basis of different information.<sup>58</sup>

58. In this case, the authors provided an outline of their sources of information but without sufficient detail to know exactly what information the evaluators were exposed to. For instance, they noted reviewing “various documents and letters”<sup>59</sup> but did not provide further detail. As such, it would be impossible to replicate the examiners’ decision process. In addition, it would be difficult to discern what information the examiner did not have access to but should have in order to ensure they considered all of the essential information needed for the evaluation.

**Q113 Does the report consistently and accurately refer to relevant literature?**

59. Referencing is a fundamental component of the communication of scholarly and scientific knowledge. Citations link data, results, theories and conclusions to their epistemic foundations; allow readers to access and evaluate the original sources underpinning the work; and ensure that the authors and owners of the information relied upon are properly credited.<sup>60</sup> Conversely, unsourced statements or the inclusion of irrelevant sources can cause confusion and may misdirect readers about the scope and basis of the author’s work. Thus, the accurate and conscientious

---

<sup>58</sup> Guamera, L.A., Murrie, D.C., & Boccaccini, M.T. (2017). Why do forensic experts disagree? Sources of unreliability and bias in forensic psychology evaluations. *Translational Issues in Psychological Science*, 3(2), 143–52, <https://doi.org/10.1037/tps0000114>.

<sup>59</sup> Logan et al., 2020, 5.

<sup>60</sup> Penders, B. (2018). Ten simple rules for responsible referencing. *PLoS Computational Biology*, 14(4), e1006036, <https://doi.org/10.1371/journal.pcbi.1006036>.

attribution of information to its source is a key aspect of rigorous scientific assessment.

60. The Psychological Autopsy includes a number of relevant and appropriate in-text citations to support elements of the assessment, as well as an accompanying reference list. However:

- Unattributed claims appear throughout the report. Some examples include:
  - Countless studies have demonstrated that even mild rejections lead people to take out their aggression on innocent bystanders.<sup>61</sup>
  - ... disruption of the mother-infant bonding process early in the child's life is thought to result in more callous, affectionless, unempathic, psychopathic-like interpersonal behaviour...<sup>62</sup>
  - Both dehumanization and objectification are linked to physical violence towards woman [sic] and extreme victim blaming.<sup>63</sup>
- The abbreviated references cited in-text do not always appear in expanded format in the reference list. For example, Dietz, 2009;<sup>64</sup> Monahan, 2006;<sup>65</sup> Dutton, 1988<sup>66</sup> do not appear in the reference list. A complete citation is generally needed to locate a specific source.
- Some references in the reference list were not cited in the body of the report. Specifically, the work of Knoll & Pies, 2019; Leary, Twenge & Quinlaven, 2006; Levy, Ayduk & Downey, 2001; Toch, 1992 appear in the reference list without an accompanying in-text citation. It is unclear if these additional references were meant to be cited in the report but were unintentionally omitted, or if these references were meant to be deleted from the list prior to submission. Generally, only explicitly cited sources appear in reference lists.

---

<sup>61</sup> Logan et al., 2020, 47.

<sup>62</sup> Logan et al., 2020, 48.

<sup>63</sup> Logan et al., 2020, 51.

<sup>64</sup> Logan et al., 2020, 40.

<sup>65</sup> Logan et al., 2020, 43.

<sup>66</sup> Logan et al., 2020, 48.

**Q114** Is all of the information, data, and conclusions contained in the report clearly relevant to the assessment?

61. Scholars have noted that psychological assessments can sometimes stray widely from their intended purpose.<sup>67</sup> The inclusion of irrelevant information or content with questionable relevance is problematic because it can increase the risk for bias,<sup>68</sup> introduce due process and incrimination issues,<sup>69</sup> and can intrude unnecessarily into the privacy of the evaluatee,<sup>70</sup> among other issues.
62. In this case it is somewhat difficult to determine what was and was not objectively relevant given the ambiguity surrounding the purpose of the Psychological Autopsy. Nevertheless, there are a number of examples where the specific relevance of information, data, and conclusions was either ambiguous or unstated. This leaves readers to make their own inferences about relevance and meaning. Some examples include:

We are aware of the CBS Drama *FBI: Most Wanted* series which aired prior to April 18th and featured a police officer named Gabriel Clark who went on a shooting spree, setting a house on fire. As far as [NAMED INTERVIEWEE] knows, [EVALUEE] did not watch this program.<sup>71</sup>

Leistico, Salekin, DeCoster, & Rogers (2008) cautioned that the predictive utility of Factor 1 may be underestimated because it reflects “interpersonal charm, exploitative manipulation, and self advancing deceitfulness, which are likely associated with duping the system and escaping documentation of antisocial conduct” (p. 40).<sup>72</sup>

The term “malignant narcissism” was introduced by psychologist Eric Fromm who described it as “the quintessence of evil” and added that it was

<sup>72</sup> Logan et al., 2020, 44.

“the most severe pathology and the root of the most vicious destructiveness and inhumanity” (1964, p. 37).<sup>73</sup>

Mission-oriented shooters make many decisions, including the types of weapons they will use, where to obtain them, the clothes they will wear, who the victims will be, and what they will do at the location(s) of the shootings (O’Toole, 2014).<sup>74</sup>

[EVALUEE] had an interest in transsexual pornography (male to female).<sup>75</sup>

**Q115 Does the report consistently distinguish facts from opinions and inferences?**

63. Psychological assessments and expert opinions usually involve a process of inference. This process involves reasoning from information that is known to have happened or has been shown to be true (i.e., facts), to subjective beliefs, opinions, and conclusions about those facts. As such, facts and inferences have fundamentally different properties – one is known or agreed to be true, while the other is a belief based on the application of relevant training, study, and experience to what is known or agreed. Thus, rigorous psychological assessments must clearly differentiate facts and inferences<sup>76</sup> to ensure that readers understand what is known and can be accepted, versus what is believed and should be evaluated. In fact, forensic evaluators are encouraged to report data and inferences in separate sections of the report, with only data reported in a data-based section of the report preceding a separate inferences and opinions section of the report that relies on the earlier data but introduces no new facts.<sup>77</sup>

<sup>73</sup> Logan et al., 2020, 44.

<sup>74</sup> Logan et al., 2020, 50.

<sup>75</sup> Logan et al., 2020, 51.

<sup>76</sup> Grisso, 2010; Ireland, J.L. (2012). Evaluating expert witness psychological reports: Exploring quality (summary report). University of Central Lancashire. <http://netk.net.au/Psychology/ExpertReports.pdf>; Melton, et al., 2017; Witt, 2010.

<sup>77</sup> Grisso, 2010.

64. The Psychological Autopsy contains a number of examples where opinions are clearly differentiated from facts, such as:

...we believe that he wanted to transport her in the back of that police car and make her watch as he killed people...<sup>78</sup>

...we are of the opinion that they were Grievance Based Targets.<sup>79</sup>

...we are of the opinion that they were targeted by [EVALUEE] based on his displaced anger towards his own parents.<sup>80</sup>

Our view is that a person with a high need to control his/her functioning might feel a loss of control...<sup>81</sup>

However, there are also frequent examples of opinions and beliefs being presented as though they are facts, including:

As such, his targeting [NAMED VICTIM] was reactive in that he needed to eliminate the threat she posed to him.<sup>82</sup>

As such, the reactive target was selected by [EVALUEE] due to his belief that the target would interfere with his "mission."<sup>83</sup>

The burning of his prize cottage and warehouse resonated with [EVALUEE] in that he was destroying "his possessions" so nobody else could have them. It also represented a point of no return...<sup>84</sup>

...the drive by a prison on the 18th during the day was solidifying in his mind that he could not do time in there as his [NAMED FAMILY MEMBER] had years before.<sup>85</sup>

There are also examples where the distinction between facts and inferences is unclear. This ambiguity is in part due to the inconsistent attribution of information to sources (see also Q112 above). Although the authors list a number of collateral sources under the heading "Material Considered," these sources were not routinely or clearly linked to the information in the report, making it difficult to establish whether

<sup>78</sup> Logan et al., 2020, 6.

<sup>79</sup> Logan et al., 2020, 11.

<sup>80</sup> Logan et al., 2020, 19.

<sup>81</sup> Logan et al., 2020, 49.

<sup>82</sup> Logan et al., 2020, 31.

<sup>83</sup> Logan et al., 2020, 46.

<sup>84</sup> Logan et al., 2020, 48.

<sup>85</sup> Logan et al., 2020, 48.

information is known or agreed to be true or was a belief held by the authors or by a collateral source. For example:

He was a very good liar and that's how the affair lasted for about 1.5 years.<sup>86</sup>

This combined with small acts of kindness ingratiated him to her after the abuse that set up the fear of reprisal.<sup>87</sup>

[EVALUEE] was a jealous man who felt that it was fine for him to be unfaithful but was vigilant of his partner and always suspicious and paranoid.<sup>88</sup>

The first indication was his stated interest in going to kill his parents when his father would not remove his name from [EVALUEE's] property deed.<sup>89</sup>

**Q116 Is the basis for each opinion clearly articulated?**

65. Following on from the previous discussion about evidence-based inferences, it is important for rigorous psychological assessments to clearly articulate the factual and empirical basis for each opinion or inference.<sup>90</sup> In fact, doing so is required by ethical and practice guidelines for forensic mental health reports.<sup>91</sup>

66. The Psychological Autopsy contains a number of examples where the basis of an opinion is clearly articulated, such as:

Given the fact that there was an apparent grievance with the [NAMED VICTIMS] and the manner in which [EVALUEE] attended their residence to execute [NAMED VICTIMS], we are of the opinion that they were Grievance Based Targets.<sup>92</sup>

Given the fact that there was no known grievance between the [NAMED VICTIMS] and [EVALUEE] and the effort [EVALUEE] made attend [sic] their

<sup>92</sup> Logan et al., 2020, 11.

home, we believe the [NAMED VICTIMS] were Displacement Based Targets.<sup>93</sup>

There are two main reasons for our belief that [EVALUEE] killed some of his victims as a displaced crime symbolic of killing his mother or father or both...<sup>94</sup>

However, there are also examples where the basis for an opinion or belief is opaque or unstated, for example:

The exact timing of when [EVALUEE] shot [NAMED VICTIM] isn't known, however, we believe that [EVALUEE] engaged [NAMED VICTIM] on his return from the [SECOND NAMED VICTIM] residence.<sup>95</sup>

We are of the opinion that [EVALUEE] wasn't "good friends" with the [NAMED VICTIMS] as suggested by [REDACTED]...<sup>96</sup>

Traits particularly relevant to [EVALUEE] include conning/manipulative, poor behavioral controls, lack of remorse or guilt, callous/lack of empathy, and grandiosity.<sup>97</sup>

**Q117 Are there typographical or editorial errors or oversights?**

67. We acknowledge that even the most conscientious and careful authors will occasionally make mistakes. Nevertheless, rigorous psychological assessments will have been thoroughly checked for factual, spelling, and grammatical errors that could impact upon the accuracy or comprehensibility of the report.
68. In reading the Psychological Autopsy, we noted some errors and inconsistencies that impacted our understanding of the report:
- On page 20 the same victim was described both as an "Incidental Target" and a "reactive target." Based on the definitions provided on page 9, these terms do not appear to be interchangeable.
  - Capitalization was also used inconsistently within and between psychological disorders and concepts described in the Psychological Autopsy. For example,

<sup>93</sup> Logan et al., 2020, 23.

<sup>94</sup> Logan et al., 2020, 46.

<sup>95</sup> Logan et al., 2020, 20.

<sup>96</sup> Logan et al., 2020, 22.

<sup>97</sup> Logan et al., 2020, 44.

“psychopathy,”<sup>98</sup> “Psychopathy,”<sup>99</sup> “Narcissistic rage,”<sup>100</sup> “Narcissistic Rage,”<sup>101</sup> “sadism,”<sup>102</sup> “reactive target,”<sup>103</sup> “Grievance Based Targets,”<sup>104</sup> “Stockholm Syndrome.”<sup>105</sup> The American Psychological Association (APA) recommends not capitalizing the names of diseases, disorders, therapies, treatments, theories, concepts, principles, and models.<sup>106</sup> It was unclear when reading whether the usage variations in the report were intended to denote distinct meanings or were editorial oversights.

#### IV. Evaluating Our Opinion

69. We provide the following information to assist the Commission in evaluating the opinion we provide in Part 2 of our report.

#### Sources Informing Our Opinion

70. Our above opinion was based on the information and content of our own report in Part 1 as applied to the document “Psychological Autopsy,” dated 2020-06-03 by authors Matt Logan, Carl Sesely, and Jamie De Wit (Commission Reference: COMM0021142). The document was provided to us by the Commission on 17 March 2022 in order to:

...apply the principles set out in the draft report [i.e., Part 1] to the documents provided by the Commission, and [to] produce an additional portion of the report [i.e., Part 2] that explains any new issues arising from these documents, including an evaluation of the extent to which the Psychological Autopsy reflects evidence-based techniques and reflects best practices set out in the initial draft report.<sup>107</sup>

### Evaluating the Validity of Our Approach

71. Our approach involved several elements to allow for the evaluation of its validity. We did what we could to address accuracy, repeatability, and reproducibility both in principle and in practice. Regarding accuracy, we have been transparent that the objective correctness of our approach in principle and in practice is difficult to estimate – a problem that is not specific to us but rather plagues forensic psychological assessment more generally given the nature of the tasks involved.<sup>108</sup> We were better able to address repeatability and reproducibility: we developed a structured method that other people could follow in other cases or in this specific case and that we could follow again in other cases, as well as in this specific case. Our repeatable coding method included a series of 108 (updated to 117 after revision) explicit questions to consider, with defined coding terms.
72. Regarding reproducibility, our coding method could also be used to evaluate how well people agree with one another in evaluating other cases or this specific case. We measured our interrater reliability between ourselves as independent raters to estimate how well one might be able to use our method and reach the same conclusions (and how well we did in this specific instance). Our approach to interrater reliability was standard for processes like this:<sup>109</sup> we created the coding approach before beginning the coding, including defining the categories of 0 = “not at all” present in the report, 1 = “somewhat,” 2 = “definitely,” and a separate “not

---

<sup>108</sup> Guarnera et al., 2017.

applicable” category. We independently did all of the coding and then resolved each discrepancy using coding definitions and debate.

73. Although our independent percent rate of agreement across all of the 108 items was 70.4%, our interrater reliability was Krippendorff alpha<sup>110</sup> = 0.43, a poor level of agreement on a scale in which 0.0 indicates no agreement, 1.0 indicates perfect agreement, and -1.0 indicates perfect disagreement.<sup>111</sup> The smaller analyses by groupings of items into best practice categories as described throughout this report were similar: our observed percent rate of agreement was often notably higher than the chance-corrected interrater reliability estimates. This situation can occur in small sample sizes and when there is low variability in the data,<sup>112</sup> both of which affected our coding.
74. Specifically, there were only two raters here – and in those analyses where we only looked at reliability for a grouping of four or five items, the sample sizes were quite low. This problem is a traditional statistical power issue: the power of reliability tests to adequately perform estimation depends on the frequency of informative values,<sup>113</sup> the only remedy for which is to increase the sample size of the reliability data.<sup>114</sup> Additionally, for some of the groupings of items, there was no variability in the data (e.g., the proficiency items, which one rater coded as entirely absent from the Psychological Autopsy). When there is no variability in the data, there is no evidence

---

<sup>110</sup> Hayes & Krippendorff, 2007.

<sup>111</sup> Krippendorff, 2004.

<sup>112</sup> Krippendorff, K. (2011). Agreement and information in the reliability of coding. *Communication Methods and Measures*, 5(2), 93–112, <https://doi.org/10.1080/19312458.2011.568376>.

<sup>113</sup> Krippendorff, 2004.

<sup>114</sup> Krippendorff, 2011.

that the coders exercised their ability to distinguish among units. Reliability is calculated based on the extent to which variation in the data is explained by variation in the nature of the units measured; without variation, reliability statistics cannot estimate the degree to which a measuring instrument can respond to differences among items should they occur.<sup>115</sup> An analogy is that a broken thermometer still shows a numerical value; but a thermometer's value does not indicate anything useful unless it changes values in response to a changed temperature.<sup>116</sup>

75. One final note about the reliability of our coding is that several of our initial differences in coding decisions had to do with the original language of the items themselves rather than actual differences of position. As we worked through the items and coded the report with them, we revised the language of some of the items in ways that clarify and simplify how to code and that likely will improve future interrater reliability statistics if this coding measure is used again. For example, several items were initially worded such that the coder would have to possess knowledge not provided in the report to rate the item. In our initial coding, the two coders took a systematically different approach to these items, with one coder deciding these items could not be rated and the other attempting to rate them as best they could. In the discussion and resolution of coding differences process, we decided to systematically code based on what is in the report, rather than our own existing knowledge or information we would have to find by doing additional research

---

<sup>115</sup> Krippendorff, 2011.

<sup>116</sup> Krippendorff, 2011.

beyond the report itself. And we also edited all of the items themselves to make that clear for future use.

76. Regarding other validity-related considerations, we have been clear that there are no empirical or peer-reviewed studies supporting the approach we used, as we developed it in the course of this analytic process. However, our approach was carefully developed based on the research and professional literatures, with careful citations for our assertions.

### Our Proficiency

77. Kristy Martire and Tess Neal have published qualitative analyses of expertise in peer-reviewed journals.<sup>117</sup> Although publication in peer-reviewed outlets does not guarantee quality or proficiency,<sup>118</sup> it does indicate that our methods and performance have survived a form of independent external scrutiny. Ultimately, there is no objective ground truth regarding our ability to analyze and critique the rigour of a forensic psychological assessment. As a result, the Commission may need to

consider whether the methods we have employed and the indicators of quality are sufficient to increase the likelihood that our assessment is accurate in this case.

#### **Bias Management, Quality Assurance, and Communication of Data and Opinion**

78. We took a number of steps to manage the potential for bias in our assessment. In particular, we ensured that: we only saw the psychological assessment in question (in this case, the Psychological Autopsy), without exposure to any other information about or from the case; we refused access to other documents available to and from the Commission; we formalized our coding scheme prior to viewing the report; we intentionally did not discuss the report with each other prior to each of us independently coding our classifications for the 108 items; we finalized our method of recording our responses prior to viewing the report and drafted the structure of this report prior to viewing the Psychological Autopsy; and we did not discuss the case or undertake any background research about it to ensure we remained blind to any information that could potentially bias our evaluation. While we both had some prior expectation that the Psychological Autopsy report may be lacking in terms of its rigour, given the Commission's interest and the fact of the public inquiry, we did not know (and do not know) whether the report itself is the central object of the Commission's inquiry or whether it is some small part of the inquiry process.
79. Given the best practices we identified in Part 1 of our report and the questions we proposed to explore them (based on ethical guidelines for psychologists, the principles of open science, and critical scholarship from forensic science and psychology about what makes for a good scientific approach to answering forensic questions), we feel we had a solid foundation for our evaluation that was clearly

structured and explicit prior to viewing the report. After we independently read and coded the Psychological Autopsy on the 108 items originally proposed, we then measured how well we could independently come to the same conclusion without discussion. This process of independent coding, examining the interrater reliability of our independent processes, and then resolving discrepancies through discussion is a quality assurance process that increases the transparency of our approach and lends insight into its quality. Our transparent sharing of our coding reliability encourages critical evaluation of our own process by the Commission. We also discuss the various limitations and assumptions of our approach below.

80. In addition, we are both trained in clinical/forensic psychology, psychological assessment, and forensic applications of psychology. We are licensed as psychologists and both hold certifications in forensic psychology, as detailed in Part 1 of this report. These quality assurance indicators, among others, suggest we are sufficiently qualified to undertake the current analysis.
81. In our communication of methods and results in this report, we have approached writing with as much organization and clarity as we can, including a table of contents and a structure that was as similar as possible to Part 1 to aid in readability by the Commission. We worked to avoid the use of jargon and included a glossary to help define possibly difficult terms. We have transparently shared the items we used to consider the characteristics of the Psychological Autopsy. We have retained nuance and conservatism in our conclusions, recognizing the possibility for error while doing what we could to minimize it. We have also endeavoured to use neutral,

objective language throughout and to ensure the basis and sources for our opinions are transparent.

### **Limitations and Assumptions**

82. As with any process, our approach carries limitations and was based on certain assumptions that should be considered by the Commission in evaluating our analysis. The most significant of these could be the fact that we know little about this case – we know only what was provided in the Psychological Autopsy and the broad outline of the case from our initial conversations with Professor Emma Cunliffe, Research and Policy Director for the Commission when we considered taking this assignment. While we intentionally designed our method this way to limit biasing influences on our assessment of the Psychological Autopsy in question, we recognize that our lack of knowledge of other factors relating to the Commission’s inquiry could be limiting. This lack of information about the broader picture of the Commission’s inquiry could affect our testimony in the public hearing process: we can imagine a situation in which we are asked in the public hearing something about the incident beyond what is described in the Psychological Autopsy that we may not know – and which could negatively impact perceptions of us as experts involved in this process. We will communicate clearly why we know what we know and especially why we do not know whatever might come up in the testimony examination process to try to mitigate the effects of this potential limitation.
83. Related to this limitation is the fact that, because we have intentionally not examined any collateral documentation about the case, we do not know if the information in the Psychological Autopsy accurately reflects the sources of information in that

report. Additionally, we could not reach a definitive opinion about whether the Psychological Autopsy was sufficiently rigorous for its purpose. This is in part because we do not know exactly what the purpose of the evaluation was because it was not clearly defined in the evaluation report. But it is also in part because we intentionally do not know where or how this Psychological Autopsy fits into the broader context of the case and incident in question. We could consider the report itself and describe its characteristics and quality within those pre-defined areas we identified – but we could not and cannot provide an opinion about its appropriateness to the incident as we have limited information about its purpose in context.

84. Regarding the limitations of our coding itself, first, we did not subject our 108 items to empirical evaluation and thus cannot speak to their validity. We can use our questions qualitatively – as we have done – but this approach is limited and cannot provide definitive answers. We can also form our opinion based on this approach for the Commission to consider in the inquiry process, but as with any expert opinion, there are limitations that should be considered along with the opinion itself.
85. A second limitation of our coding process itself is that we had variable interrater reliability on the independent initial coding. While we were able to independently code some of our categories of items with perfect reliability, other groups of items had poor reliability. Imperfect coding reliability is almost inevitable, but some of our coding was low enough to be considered problematic for one person to code alone without further development of the items and an associated coding manual. Because our process involved the subsequent step of discussion and resolution of coding

differences, these independent reliability concerns are reduced, but they are nevertheless worth keeping in mind as a limitation of our approach.

#### **Alternative Views and Disagreements**

86. Our qualitative characterizations of the extent to which each of the 108 questions from Part 1 were addressed in the Psychological Autopsy were subjective. Fundamentally, this means that the qualitative characterizations represent our own opinions and, as such, may differ from the opinions of others. We believe we have provided sufficient evidence to justify our classifications, and our use of an independent coding methodology accompanied by discussion and resolution adds rigour to our approach. Nevertheless, we anticipate that other practitioners could reasonably have taken a different approach to assess the rigour of a forensic psychological assessment.

#### **Ethical Obligations and Codes of Conduct**

87. We have the appropriate licences (as psychologists), qualifications (in forensic assessment), and authorizations (published in this field) to complete this analysis. We have complied with our ethical obligations as licensed psychologists and members of the major psychological associations in the United States and Australia. Further detail about our backgrounds and qualifications to do this work, as well as our ethical obligations due to our professional memberships and the jurisdictions in which we work, is provided in Part 1 of this report.

## I. Introduction

Over the previous decades Western countries have witnessed an increase in mass casualty attacks and the deadliness of such attacks. Overwhelmingly, these attacks have been committed by men (Densley & Peterson 2019; Issa 2019). Coinciding with the growing threat, there has been an increase in attention and research by policymakers, law enforcement, and security agencies aimed at preventing, responding to, and understanding these events and the men who commit them. At the same time, there has been increased recognition of the harms of gender-based violence, also overwhelmingly committed by men, and a similar rise in attention (see Fitz-Gibbon et al. 2018; Marganski 2019; Rozdilsky & Snowden 2021). Mass casualty attacks and

## Links between Gender-based Violence and Mass Casualty Attacks

gender-based violence have typically been seen as separate phenomena. However, with recent attention to the gendered nature of mass casualty attacks, the connections have become increasingly apparent. Men who commit gender-based violence are often the same men who commit mass casualty attacks, and specific women, particularly intimate partners, are often the first victims of such attacks. Misogyny, the hatred of women, also features as a motivator, wholly or in conjunction with other forms of hate, in some mass casualty attacks (Tomkinson et al. 2020; Wilson 2020).

This report examines the connections between gender-based violence and mass casualty attacks, adding to the small but growing body of literature that considers mass casualty attacks through a gendered lens. Until recently the siloed approach to understanding gender-based violence and mass casualty attacks meant the connections have often been hidden. The dichotomous approach to these two types of violence is underpinned by a longstanding and pervasive division between what is considered discretely as private and public violence. The division is grounded in historical patriarchal social, legal, and cultural understandings of the different roles and attributes of men and women and, based on these, the accepted and assumed character of relationships between men and women across society and in the home between intimate partners in particular. Gender-based violence, particularly domestic and family violence, has long been considered a form of private violence, while mass casualty attacks, particularly when an attack is not limited to intimate partners and family members, are located squarely in the frame of public violence.

The dichotomous approach to private and public violence undermines the ability to understand, prevent, and respond to mass casualty attacks. Failing to fully investigate and articulate the connections simultaneously reinforces the tendency to deny, minimize, excuse, and

Links between Gender-based Violence and Mass Casualty Attacks

normalize gender-based violence. However, before setting out the growing evidence for and value of considering the connections between violent phenomena typically considered separately, it is important to acknowledge the differences between gender-based violence and mass casualty attacks. Understanding the discontinuities alongside the continuities is necessary to fully appreciate the advantages of a less siloed approach as well as the policy challenges and opportunities of embedding a better understanding of gender-based violence in approaches to the prevention of mass casualty attacks.

Gender-based violence is ubiquitous. Intimate partner violence, the most common type of gender-based violence, is arguably the most frequent form of violence dealt with in many Western criminal justice systems (Goodmark 2018). Mass casualty attacks, on the other hand, are relatively rare. While gender-based violence is an everyday and often invisibilized reality, mass casualty attacks represent an obvious rupture to daily life, provoking widespread public anxiety. The nature of mass casualty events, involving multiple homicides in a short time period and in a geographically concentrated area, understandably garners widespread attention. Yet intimate partner homicide typically accounts for more deaths and casualties than mass casualty attacks in any given year (Marganski 2019; Walklate et al. 2019a: 66–67). When intimate partner homicides are reported in the media, they are typically presented as isolated events rather than as part of a pattern, and as a result, the high toll of such violence is not kept in clear view (Fairbairn & Dawson 2013). Finally, although many mass casualty attackers are often perpetrators of gender-based violence (Iratzoqui & McCutcheon 2018; Issa 2019), the overwhelming majority of men who commit gender-based violence do not commit mass casualty attacks.

The result of the differences between ‘private’ and ‘public’ violence, combined with the dichotomous approach to understanding each, is that the connections between gender-based

## Links between Gender-based Violence and Mass Casualty Attacks

violence and mass casualty attacks are often hidden. Specific gendered analyses of mass casualty attacks are remarkably absent from the literature (but see Issa 2019; Marganski 2019; McCulloch et al. 2019; Silva et al. 2021; Smith 2019; Windisch 2020; Zeoli & Paruk 2020). Despite this lacuna, it is clear that a better understanding of the continuities between private and public violence is an important tool in preventing mass casualty attacks.

The following section focuses on the dichotomy between private and public violence, how this dichotomy has affected the understanding of mass casualty attacks, and the feminist scholarship that reveals continuities between violent phenomena typically considered separate. This discussion is followed by a detailed examination of the evidence of connections between mass casualty attacks and gender-based violence, before addressing the need for further gender-focused research and the policy implications to be drawn from the extant research. Three case studies are utilized to illustrate the connections between gender-based violence and mass casualty attacks, the way that connections are downplayed or misinterpreted, and the implications of this ‘looking away’.

## **II. Challenging the Dichotomy between Private and Public Violence**

There is a longstanding division in how ‘private’ and ‘public’ violence is approached. The division reflects a worldview that sees violence committed in homes and involving intimate partners and family members as private. While gender-based violence is now widely considered a public issue, it is nevertheless seen as different and separate from violence that takes place in public between strangers. This separation is founded on outmoded but resilient ideas around gendered relations of power that consider women as male property (Scutt 1990: 444–98; see also Cockburn 2012; Kelly 1987). These arcane attitudes persist today at an individual level and in social, political, and legal structures, including criminal justice systems, national security

Links between Gender-based Violence and Mass Casualty Attacks

priorities, the media, and research agendas. As Dake (1992: 33) has argued, shared worldviews ‘provide powerful cultural lenses, magnifying one danger, obscuring another threat, selecting others for minimal attention or even disregard’. Gender-based violence, especially domestic and family violence, is typically studied separately from public violence. Iratzoqui and McCutcheon (2018) have suggested:

Within criminological research, domestic violence has been treated as a separate entity, because domestic violence is largely seen as a ‘uniquely female’ phenomena, since females are overwhelmingly the victims of this form of violence . . . (147).

The siloed approach to research on domestic and family violence, and gender-based violence more generally, is relevant to the range of disciplines that study violence.

Gender-based violence is not consistently given a high priority in policing in Western jurisdictions (see Dowling et al. 2018 for a review of policing practice in Australia, Canada, New Zealand, and the United Kingdom; see HM Inspectorate of Constabulary and Fire Rescue Services 2021 for an extensive gendered analysis of policing in the United Kingdom). In Canada, Barrett et al. (2011) have found that most intimate violence incidents where police became involved were due to self-reporting rather than police action/investigation; and Saxton et al. (2021) have found that many women did not report to police and sometimes received dismissive responses when they did. Perpetrators of intimate partner violence are typically seen as less culpable than other offenders; and victims are often seen as responsible for provoking violence and are not always fully recognized as victims (Fairbairn & Dawson 2013: 6–7; Smith 2019: 223–25). A reflection of this diminished culpability is that often men who kill intimate partners are not seen as ordinary killers but as ordinary men driven to spontaneous acts of violence in moments of passion (Dobash et al. 2004: 577). This perspective remains influential despite evidence that male-committed intimate partner homicides are often planned (Bitton & Dayan 2019; Dawson 2006: 1443; Polk 1994: 31).

## Links between Gender-based Violence and Mass Casualty Attacks

The seeming dichotomy between private and public violence influences the way mass casualty attacks are researched and reported. Many studies of mass shootings, for example, exclude shootings in which the sole victims were family members or which took place exclusively in private spaces such as homes, regardless of the number of people killed or injured (Huff-Corzine & Corzine 2020; Silva et al. 2021: 2168–69). Studies on lone-actor terrorism consider the targeting of specific women in such attacks as ‘trigger events’ rather than as part of the events themselves, even when the circumstances often indicate that the ‘trigger’ and the mass casualty attack are continuous or proximate in time. In addition to this, studies typically seek to discover what made such attackers *turn* violent. This frame of analysis overlooks or downplays the history of gender-based violence in the biographies of attackers that indicates that they didn’t turn violent but were instead violent men (McCulloch et al. 2019). Typically, studies of terrorism have excluded attacks motivated by misogyny because hatred of women tends to be treated differently from, for example, race-based hatred (Anti-Defamation League 2018; Lawrence et al. 2021; see below for further discussion).

Media reports of mass casualty attacks in which only family members were victims are reported differently from mass ‘public’ casualty attacks. In the former cases, killers are often described as ‘good guys’ (Gilmore 2019: 107 & 111). Over-identification with perpetrators is also found in commentary that suggests female intimate partners are responsible for familicide—a homicide where a spouse and one or more children are killed (Wilson et al. 1995). In 2020 in Australia, for example, a woman and her three young children were set on fire and murdered by her estranged husband who then committed suicide. The perpetrator had a domestic and family violence protection order against him. The police investigator in the case commented:

[T]here are probably people out there in the community that are deciding which side, so to speak, to take in this investigation. Is this an issue of a woman suffering significant domestic violence, and her and her children perishing at the hands of the husband? Or is

Links between Gender-based Violence and Mass Casualty Attacks

it an instance of a husband being driven too far by issues that he's suffered by certain circumstances into committing acts of this form? (Powell 2020)

Feminist researchers and activists, however, have long challenged the private–public dichotomy, arguing instead that there is a continuum of violence that connects the dots between violence of different types and scales, and that these events ‘can be perceived as a series, a succession of events that have something in common and may be causally linked’ (Cockburn 2012: 1).

Scholarship that connects intimate partner violence and terrorism utilizes this concept of a continuum of violence. Morgan (1982) has considered ‘wife abuse’ and the fear it produces as ‘everyday terrorism’, arguing that husbands use violence to threaten and harass their wives in ways that are similar to terrorists who threaten those they kidnap. Johnson (1995; 2008) has posited the notion of ‘intimate terrorism’ whereby a male intimate partner is violent and controlling. More recently, Pain (2012) has connected the ‘everyday terrorism’ of domestic and family violence with the more widely recognized public security threat of global terrorism. Framing gender-based violence as a type of terrorism locates women’s everyday security in the same frame as the ‘public’ violence associated with national security (Walklate et al. 2019a).

Joan Smith (2019: 6) has pointed out that ‘male violence doesn’t stay in neat categories’ but spills between the private and public. The statement made on pirate radio by a man who subsequently killed three Pittsburgh police officers and wounded others exemplifies how male rage and violence can readily cross and disrupt the assumed boundaries of private and public. He claimed then to ‘want to kill my ex-girlfriend, her mother, her pets, my father, people I don’t like’, and, in a random measure, a couple members of the Pittsburgh police (quoted in Hamm & Spaaij 2017: 201). As demonstrated throughout this report, mass casualty attacks and gender-based violence are not separate but intimately connected.

### **III. Gender-based Violence, Misogyny, and Mass Casualty Attacks**

Research focusing specifically on the connections between gender-based violence and mass casualty attacks has only just begun to emerge. This research tends to draw heavily on US data (e.g., Issa 2019; Silva et al. 2021; Windisch 2020). Studies beyond the United States tend to be qualitative rather than quantitative and draw more heavily on case studies (e.g., Hoffman et al. 2020 in Canada and the United States; McCulloch et al. 2019 in Australia; Smith 2019 in the United Kingdom). Investigative journalists have made an important contribution to exposing the connections between gender-based violence and mass casualty attacks by revealing the histories of gender-based violence in the biographies of attackers and highlighting the targeting of specific women, often intimate partners, and tracing this pattern across multiple incidents (see, e.g., Freeman 2017; Saltman 2016; Stephenson 2017; and Talbot 2016 in the United Kingdom; Taub 2016 in the United States). These journalistic contributions are especially important because data collected on mass casualty attacks has often excluded information on gender-based violence. Given this gap, scholars (e.g., Issa 2019; Windisch 2020) and civil society organizations (such as Everytown for Gun Safety) that conduct analysis on the connections between gender-based violence and mass casualty attacks rely on media reports to build or supplement police records and data bases.

It is important to note that the data on mass casualty attacks is fractured, overlapping, and incomplete (Huff-Corzine & Corzine 2020). Data are siloed between studies on terrorism and mass shootings (but see Fridel 2021). Terrorism is broadly defined by the political motive of actors rather than the number of casualties inflicted. However, given that terrorists often do inflict mass casualties and almost always plan or attempt to inflict mass casualties (Marganski 2019; Silver et al. 2018), studies on terrorism are relevant. Mass shootings and terrorist attacks

## Links between Gender-based Violence and Mass Casualty Attacks

also significantly overlap, in that an act of terrorism may involve firearms and mass casualties, and a mass shooting may be committed by an attacker with a recognized political motive and thus be considered terrorism (LaFree et al. 2018). There are also gaps in the data. Some attacks—for example, one in which an actor with no (known or recognized) political motivation uses a vehicle or edged weapon in an attempt to kill—may not be captured as either a mass shooting or a terrorist attack and, as a result, not be included in any systematically compiled data base. In 2017 in Melbourne, Australia, for example, a 26-year-old man deliberately drove his car into pedestrians in the busy central business district, killing six and injuring dozens of others. The attack was not politically or ideologically inspired and so not considered an act of terrorism, and it did not involve a firearm (Rychter & Mullan 2017). In addition, the definitions and frameworks of analysis used in the study of both mass shootings and terrorism often adhere to the private–public dichotomy so that gender-based violence is typically not highlighted.

Despite the limitations of the extant research linking mass casualty attacks and gender-based violence, there is nevertheless strong evidence pointing to connections, which will be examined further below. These connections can be found in the targeting of specific women, often as the first victim, and the history of gender-based violence in the backgrounds of men who commit such attacks. They can also be discerned in the explicit misogynist motivation of some mass casualty attackers and the intersection of misogynistic motivations with other types of violent extremism, such as white supremacy, that are more widely recognized as motivation for mass casualty attacks. Bjarnegård et al. (2020) have recently reviewed research on the links between sexism and misogyny in existing research, arguing that those holding misogynistic views are more likely to participate in public acts of violence and reinforcing the need to further investigate these connections.

## Links between Gender-based Violence and Mass Casualty Attacks

**1. Specifically-targeted Women as Victims in Mass Casualty Attacks**

The targeting of specific women, particularly intimate partners, often as the first victims, is a common theme in mass casualty attacks. According to US research that examined mass casualty attacks of all types, familicide is the most common type of mass casualty attack, with perpetrators being mainly husbands and fathers and the victims being intimate partners, children, and other relatives (Fridel 2021). In 2015, *HuffPost* did an analysis of five years of data (2009–15) collected by Everytown for Gun Safety (Chemaly 2015). According to its analysis, 64 percent of mass shooting victims overall were women and children, although women typically made up only 15 percent of total gun violence homicide victims, and children only 7 percent. Beyond this data, the *HuffPost*'s analysis found that in the 57 percent of mass shootings that involved an intimate partner or another family member victim, 81 percent of the victims were women and children. Based on this it argued:

The untold story of mass shootings in America is one of domestic violence. It is one of men (yes, mostly men) targeting and killing their wives or ex-girlfriends or families. The victims are intimately familiar to the shooters, not random strangers. This kind of violence is not indiscriminate—though friends, neighbors and bystanders are often killed alongside the intended targets (Jeltsen 2015).

A later analysis of twelve years of mass shootings in the United States (2009–20) concluded that mass shootings are often 'intermingled with acts of domestic violence' (Everytown for Gun Safety 2021). This study defined mass shootings as those with at least four fatalities (excluding the attacker). Based on media and police reports of 262 incidents, it found that in most mass shootings (at least 53 percent), the attacker shot a current or former intimate partner or family member during the attack and that 'domestic violence-related mass shootings' accounted for almost half of all mass shooting deaths. The overwhelming majority of these shootings involved at least one victim in a private home (93 percent) and did not move into a public space (80 percent). Overall, the study found that 61 percent of mass shootings occurred

## Links between Gender-based Violence and Mass Casualty Attacks

exclusively in the home, and nine percent occurred partially in a home and in public, meaning that less than one third of mass shootings occurred exclusively in public. The report notes that ‘while mass shootings in public places tend to receive more media attention, the majority of these shootings actually occur in private homes’ (2021: 6). Duwe (2020) has observed:

[B]ecause familicides and felony-related massacres are less newsworthy and thus much less likely to have been used as typifying examples, proposals to curb the incidence and/or severity of mass murder are seldom focused on domestic violence, drug policy, or urban crime (20).

Silva et al. (2021) have examined gender-based mass shootings in the United States from 1966 to 2018. Most relevant here are their findings on specifically-targeted women. They defined mass shootings as those involving at least four casualties (gun fatalities or injuries) and at least some victims who were chosen at random or for their symbolic value. Familicide, regardless of the number of victims, was specifically excluded, as were shootings occurring solely in private space (Silva et al. 2021: 2168–69). The study was thus limited to mass ‘public’ shootings (2168). In focusing exclusively on incidents in which the targeting of a specific woman was part of a mass ‘public’ shooting, the study usefully illuminates the connection between the ‘private’ and ‘public’ aspects of mass shootings. The study is also significant for being one of the few quantitative studies (and to date, the largest) that explicitly examined the connection between gender-based violence and mass shootings. The study found that what it defined as gender-based mass ‘public’ shootings are a significant subcategory of mass shootings. The study identified 311 mass shootings between 1966 and 2018, of which 106 or 34 percent were defined as gender-based (2172). If the study had included mass ‘private’ shootings such as familicides that occurred in the home, the percentage of mass shootings found to be gender-based would have been significantly higher, given that most familicides are committed at home by men against women and children (see above; and Everytown for Gun Safety 2021).

## Links between Gender-based Violence and Mass Casualty Attacks

Silva et al.'s recent study (2021) defined gender-based mass shootings as those motivated by grievances against women and divided these shootings into categories based on whether a specific woman or women in general were targeted, as well as whether the attacker directly targeted the woman who was the source of the attacker's grievances. It found that the targeting of a specific woman against whom the attacker had a grievance, such as 'girlfriend, wife, or a woman who rejected their advances' (2170), was the most common category of gender-based mass shootings. Specific woman-targeted attacks consistently made up the majority of gender-based mass shootings (38–66 percent), except during the 1970s (Silva et al. 2021: 2172). Over the total study period, specific woman-targeted attacks made up 47 per cent of the gender-based mass shootings (2172). Again, by defining mass shootings as events that involve members of the public and that take place at least partly in public, the study underestimated the number of mass shootings in which specific women were targeted because, as the Everytown for Gun Safety report (2021) makes clear, specific women-targeted mass shootings often take place exclusively in homes and/or as part of incidents of familicide.

As well, research on terrorism indicates that the targeting of specific women is a persistent recurring theme in attacks. Over the previous decade, lone-actor attacks have come to be considered the most serious type of terrorist threat (Hamm & Spaaij 2017: 1; Hewitt 2021: 5; Pantucci et al. 2015: 1; Richman & Sharan 2015). In contrast to attacks undertaken by terrorist groups, attacks by lone actors are more likely to be motivated by what has been referred to as a mix of 'personal vendettas' and political grievances (Hamm & Spaaij 2017: 9, 66; Hewitt 2021: 4). These personal motives are linked to the targeting of specific women. Hamm and Spaaij's (2017) study on 'lone-wolf terrorism' in the United States between the 1940s and mid-2016 is particularly useful. Drawing on previous research and open access sources, the study included

## Links between Gender-based Violence and Mass Casualty Attacks

123 cases—the most extensive database on lone-actor terrorism (Hamm & Spaaij 2017: 24). The authors have suggested that violence against women is often a ‘precursor crime’ to lone-actor terrorism (11). Their study, similar to those on mass shootings, highlighted the targeting of specific women as a common feature of these terrorist attacks, concluding ‘that for some of the most lethal lone-wolf terrorists, interpersonal conflicts with women can act as a triggering event’ (53). As their case studies demonstrate, the phrase ‘interpersonal conflicts with women’ often includes a history of assaults on the specifically-targeted woman prior to the attack, and what they have referred to as triggering events are often the violent, sometimes deadly, assaults on the targeted woman. Their study did not quantify the number of attacks that included targeting a specific woman, but they have referred to multiple case studies that describe such attacks. In numerous of the case studies, an intimate partner or woman whom the attacker stalked and harassed was the first target. For example, one attack in Florida involving multiple fatalities began three hours earlier when police attempted to arrest the perpetrator for an assault on his wife at their home (129–30). In another attack that took place in California, the attacker’s ex-girlfriend was the first of four of the attacker’s former co-workers he shot and killed (168; see also Bailey & Fields 2001).

Hamm and Spaaij’s (2017) study helpfully recognizes the close connection between lone-actor terrorist attacks and gender-based violence. At the same time, it highlights the problematic frames of analysis employed when analyzing gender-based violence and its connection to terrorism and other types of mass casualty attacks. Maintaining that ‘conflict with a woman’ is a ‘trigger’ for attacks implicitly mutualizes the violence by suggesting that there is a problem *between* the man and the woman (McCulloch et al. 2019: 442). The idea of the ‘conflict’ with a woman being a ‘trigger’ suggests that the woman caused or provoked the violence. It also tends

## Links between Gender-based Violence and Mass Casualty Attacks

to obscure the targeting of the ‘trigger woman’ in the terrorist attack. In the California case, for example, Hamm and Spaaij (2017) have described the attack on co-workers as ‘triggered by a breakup with his girlfriend’ but have not specified that the girlfriend was killed in the attack (168). The idea of a woman as a trigger suggests a sequence in which there is a ‘trigger’ and then an attack. It is clear, however, that in many cases, the attack on a specific woman is not simply a prelude to the attack—rather, it is integral to it. Though specifically-targeted women are often killed/attacked first, case narratives indicate that the attacks against specifically-targeted women and members of the public are often temporally closely connected. Silva et al.’s (2021) study on gender-based mass shootings reinforces this point. It found that specific woman-targeted mass shootings are significantly more likely than other gender-based shootings to be spree attacks in which there is no ‘cooling-off’ period between killings (2174).

The dichotomy between private and public violence that underpins the frameworks of analysis used by researchers undermines the recognition that in many cases, violence against a specifically-targeted woman, often an intimate partner, is not a trigger or a precursor to a mass casualty attack but part of a continuum of violence that includes both women known to the attacker and members of the public.

## **2. A Background of Gender-based Violence in the History of the Attacker**

There is strong and growing evidence of gender-based violence, including intimate partner violence, stalking, sexual assault, and harassment in the biographies and backgrounds of mass casualty attackers. But it remains difficult to quantify the number of mass casualty attackers with histories of committing gendered violence. Apart from the issue of the comprehensiveness and siloing of data, often these histories of violence are not sought out by researchers and investigators (see Smith 2019: 3–9, who documents this tendency). Evidence of witnessing or

Links between Gender-based Violence and Mass Casualty Attacks

being subject to gender-based violence during childhood, which may be relevant to an attacker's history, is even less investigated and cited. Still today, and even more so historically, gender-based violence, particularly domestic and family violence, is hidden, unreported, or not recorded.

Regardless of the often-hidden nature of gender-based violence, a history of gender-based violence in the backgrounds of men who commit mass casualty attacks is so common that Marsha Robertson of Futures without Violence, a United States group committed to ending domestic and sexual violence, has characterized the disclosure of such histories as 'Day 3' of mass casualty attacks:

[T]he shooting occurs and the press has only the bare bones of the incident. On Day 2, the media has access to much more biographical information. On Day 3, further inquiry has confirmed that the shooter had a history of [committing] domestic violence (quoted in Issa 2019).

While the media often describe these histories, it is only very recently that this information has started to be more systematically evaluated. Histories of gender-based violence are often present when specific women were targeted in mass casualty attacks. Everytown for Gun Safety's report (2021) on 262 mass shootings over twelve years found that in at least 27 percent of these cases, the shooter had a known previous history of committing domestic and family violence. In 78 percent of those cases, the shooter shot and killed an intimate partner or family member in his attack. Silva et al.'s study (2021) of gender-based mass casualty shootings has noted that when an attacker engaged in a specific woman-targeted shooting, he was at least twice as likely to have a history of domestic violence (56 per cent) than other shooters in (2021: 2174).

Beth Windisch (2020) has drawn on and augmented Hamm and Spaaij's (2017) dataset of lone-actor terrorists with a layer of focused gendered analysis. Her study of 68 cases between 2001 and 2016 found that in 28 of the cases (or 41 percent of the cases included in her study),

[the attackers] were reported as perpetrators or alleged perpetrators of gender-based violence. Of the 28 individuals, intimate partner violence was most prevalent, appearing in 16 instances. Of the 16 lone-actor terrorists with reports of committing intimate

## Links between Gender-based Violence and Mass Casualty Attacks

partner violence, two individuals also engaged in child sexual exploitation, and one individual committed sexual assault and engaged in stalking behavior. Other cases of gender-based violence included sexual assault, sexual harassment, family violence, and violating orders of protection (45).

It is worth noting that in seven of these cases, this history of gender-based violence was not captured in the original dataset but uncovered through further research.

Zeoli and Paruk's study (2020) of mass shootings in the United States between 2014 and 2017, defined as the fatal shooting of four or more people (excluding the offender) in the one event, found that 28 (around 32 percent) of the shooters in their dataset of 89 were suspected of committing domestic and family violence, and 17 of these had previously been in contact with the justice system for domestic and family violence.

Similar to the study by Windisch on lone-actor terrorism (2020), Issa's examination of mass shootings in the United States (2019) found that, in addition to intimate partner violence, stalking, rape, and harassment featured in the backgrounds of a number of mass shooters. Focusing on mass shootings in the years 2015–18, she found that these gender-based crimes and behaviours featured in the histories of mass shooters with already documented histories of domestic and family violence and also in cases in which the attacker had not been charged with such gender-based offences (Issa 2019: 681–82). Apart from the above examples, there are other cases that suggest a connection. The shooter in the 2007 Virginia Tech mass shooting had a history of stalking and harassing female students, the latter by using his phone to take photographs under their desks, a behaviour commonly known as 'up-skirting' (Smith 2019: 232–33).

Despite the evidence of gender-based violence in the histories of many of the men who have committed mass casualty attacks, the 'turning point' frame of analysis remains prominent in studies of lone-actor terrorism. This turning point approach looks for triggers—events or

## Links between Gender-based Violence and Mass Casualty Attacks

experiences that lead men to turn to terrorist violence. This framework relies on a binary between private and public violence, making a distinction between pre-existing histories of gender-based violence in the private sphere and the violence of terrorist attacks. If a history of gender-based violence were fully appreciated as violence, it follows that those engaging in terrorist attacks who had histories of gender-based violence would not be considered men who *turned* violent but rather *violent men* who continued, escalated, and extended their violence to include members of the public (McCulloch et al. 2019).

In stark contrast to the turning-point frame of analysis, Joan Smith's book *Home Grown: How Domestic Violence Turns Men into Terrorists* (2019) has looked to the continuities of male violence from the private to the public sphere. Smith has argued that 'men who are used to beating, kicking, choking and stabbing women at home are considerably further along the road towards committing public acts of violence' (6). She contends that understanding the 'close link between *private* and *public* violence' is the key to better understanding and preventing terrorism (3, emphasis in original). Mobilizing the feminist concept of a continuum of violence, she has asserted:

If extreme domestic abuse shares features with terrorism, we should not be surprised by cases in which violence against intimate partners acts as a species of rehearsal for public acts of carnage (Smith 2019: 52).

Her case studies of recent terrorist attacks (by lone actors and by groups) in Western countries have documented the ties between gender-based violence and terrorism. In a chapter titled 'How Abusers Become Terrorists' (63–119) she has explored ten terrorist attacks that occurred in 2016 and 2017 across the United Kingdom, France, Spain, the United States, and Australia. Seven of the attacks involved lone men, two involved small gangs of men, and one involved two brothers. The weapons used to carry out the attacks included vehicles, knives, guns, and bombs. The number of fatalities in each attack, excluding perpetrators, ranged between one and 85, though in

## Links between Gender-based Violence and Mass Casualty Attacks

each of the attacks (apart from one in which a politician was assassinated), it was clear that the aim was to kill and injure as many as possible. In summarizing the attackers' biographies, Smith has concluded:

*[A]ll of the men . . . displayed symptoms of insecurity, resentment and rage before they turned to terrorism, suggesting that the extremist ideology they discovered was a 'justification' for acting on pre-existing violent impulses. In most cases, the first victims of those impulses were their wives, ex-wives and children—but eventually they were transferred into the public sphere . . . (Smith 2019: 119, emphasis in original).*

Interestingly, Smith has noted recent separation from intimate partners in the history of three of the attackers. She found that each of the three men 'had been thrown out by their partners in the weeks or months before they committed a terrorist attack, a humiliating blow that also deprived them of their primary victims' (119). She has argued:

*It has long been clear that women who leave their violent partners are at risk of death or serious injuries. What hasn't sufficiently been recognized until now is that abusers who can no longer hurt members of their own families, might in a small number of cases, pose a lethal threat to complete strangers (118–19).*

The history of violence in the background of mass casualty attackers may also include a history of witnessing or being subjected to gender-based violence as a child. While there has been no systematic investigation of the frequency of this connection, research investigating links between men who witness family violence as children and adult perpetration of intimate partner violence (Fulu et al. 2017; Kimber et al. 2018) is a signpost towards a potential connection. Smith's (2019) book sets out numerous case studies of terrorists who were exposed to abuse in the home and witnessed violence between parents, typically a father's violence, usually against a mother (121–67). Although such histories are not yet routinely captured or documented, Windisch's study nevertheless found that in four of the 68 cases she examined,

*the lone actor terrorists reportedly witnessed domestic violence in their childhood homes, with three cases of having witnessed their fathers abusing intimate partners and, in one case, the father abusing a sister (2020).*

## Links between Gender-based Violence and Mass Casualty Attacks

Hewitt's (2021) study too of nineteen cases of lone-actor terrorism in Canada between 1868 and 2018 found that in two of these cases there was a known history of intergenerational family violence. Again, this is likely to be an underestimate given that such histories are often undocumented. This dataset includes the 1989 attack on the Montreal Polytechnic. Hewitt records that the Montreal attacker's 'father was abusive and disrespectful toward women, with a view that a woman's purpose was to serve men; he beat his wife and [the attacker]' (34). Further systematic attention to such histories in analysis of mass casualty attacks is clearly warranted.

New research commissioned by Counter Terrorism Policing UK (2021) has revealed a 'striking prevalence' of domestic abuse in the lives of those referred to the government's 'Prevent' program as being vulnerable to radicalization. The research found that 1076 of a sample of 3045 people (just over one third) referred to the program in 2019 had links to domestic abuse incidents, either as offender (mainly males), victim (mainly females), witness (mainly children), or a combination of all three. The research indicates a clear over-representation of domestic and family abuse in the lives of those referred to the program.

The mass casualty attack that comprises our first case study took place decades ago and is widely considered the 'first' contemporary mass shooting in the United States (Silva et al. 2021: 2169). It remains a paradigmatic example of the way gender-based violence frequently intersects with mass casualty attacks.

*Case Study 1: Texas Tower Sniper Shooting*

On August 1, 1966 at approximately 11.30 AM, a 25-year-old man travelled to the University of Texas campus in Austin, where he was a student. Carrying multiple firearms, the attacker, a trained marksman, climbed to the 28th floor of a clock tower and opened fire on random passersby. The shootings lasted 96 minutes before police shot and killed him. Fourteen people were fatally shot on that day, and another person died thirty-five years later of the injuries sustained on that day. In addition, more than 30 people were shot and injured in the attack. Before he travelled to the university, the attacker killed his mother and wife. Just after midnight

## Links between Gender-based Violence and Mass Casualty Attacks

on the day of the university attack, he drove to his mother's home and fatally stabbed her; a couple hours later, he drove to the home he shared with his wife and fatally stabbed her.<sup>1</sup>

Though these events took place more than 50 years ago, they remain instructive in the ways gender-based violence frequently exists in the background and history of the attacker and in the commission and circumstances of mass 'public' shootings and other mass casualty attacks. Four months prior to the attack, at the urging of his wife, the attacker had attended the university health service. He told the psychiatrist that he had assaulted his wife on two occasions (Lavergne 1997: 64). These assaults were not reported to police, and there is little detail about what occurred. This is unsurprising given the social context at the time. The attacker's main concern on seeing the psychiatrist were the negative feelings about his father that had become more intense after his mother left the marriage after twenty-five years. The attacker was raised in 'a culture of abuse'. The father was known to physically and emotionally abuse his wife and children. The father once said, 'Yeah, I [beat my wife] but I loved her' (Lavergne 2017). In the visit to the psychiatrist, the attacker raised concern that he was just like his father, especially in the way he treated his wife (Lavergne 1997: 64).

A note written by the attacker, addressed 'To whom it may concern' and left on the body of his murdered mother, maintains that 'the intense hatred I feel for my father is beyond description. My mother gave that man the 25 best years of her life and because she finally took enough of his beatings, humiliation, degradation, and tribulations that I am sure no one but she will ever know—to leave him' (Lavergne 1997: 91). In another note left in the marital home, he wrote, 'I was witness to [my mother] being beat at least one [sic] a month' (Lavergne 1997: 94).

Like many of the mass casualty attacks that have occurred since, specific women, in this case, an intimate partner in addition to the attacker's mother, were the first victims. Again, consistent with the common themes in the biographies of mass casualty attackers, the attacker was a perpetrator of intimate partner violence. He had also witnessed his father's violence against his mother as a child, in addition being emotionally and physically abused himself by his father. As this case demonstrates, the link between gender-based violence, particularly intimate partner violence, and mass casualty attacks has been present for many decades, though it is only recently that these connections have begun to be investigated in any systematic way. The continued failure over more than fifty years to investigate more fully the connections between gender-based violence and mass casualty attacks points to the potency of the false dichotomy between what is considered 'private' violence targeted at specific women and the public violence of mass 'public' shootings and mass casualty attacks more generally.

### 3. Misogyny as a Specific Motivator for Mass Casualty Attacks

Some mass casualty attacks have been motivated explicitly by a hatred of women in general.

Mass casualty attacks motivated by a general hatred of women are more likely than other types of mass casualty attacks to specifically target women at large, but such attacks may also include

---

<sup>1</sup> For a detailed account of the shooting and the surrounding events, see Lavergne 1997.

## Links between Gender-based Violence and Mass Casualty Attacks

random men and women and/or a specific woman as victims. Mass casualty attacks motivated by a general hatred of women include attacks committed by participants in the online ‘manosphere’ (Everytown for Gun Safety 2022), such as ‘incels’ (see Hoffman et al. 2020; and discussion below) and other men who are explicitly antifeminist and/or generally angry at women for what they perceive as their own victimization or rejection (see Baele et al. 2019; Everytown for Gun Safety 2022). One mass casualty attack understood as explicitly motivated by misogyny and predated incel occurred in Canada in 1989. A male engineering student shot and killed fourteen female engineering students and wounded fourteen other people at the Polytechnique Montreal before committing suicide. He specifically targeted women, separating the male and female students before fatally shooting the women. The attacker’s suicide letter indicated that he was motivated by a hatred of women, particularly feminists (Hewitt 2021: 34–35). Yet until recently, there has been reluctance to consider such terrorism among researchers and law enforcement (Brewster 2018). According to the Anti-Defamation League,

Every day, as virulent white supremacists make their hatred known, we immediately and rightly call them extremists. We have not been nearly as unequivocal in our condemnation when it comes to men who express violent anger toward and loathing for women (2018: 5).

What has been labelled ‘male supremacist terrorism’ is considered a growing security threat in Western countries (DeCook & Kelly 2021). This threat is particularly associated with incel-related attacks (Hoffman et al. 2020; Tomkinson et al. 2020; Wilson 2020). Incel (which originally denoted someone who was ‘involuntarily celibate’ (Glance et al. 2021) is a largely online movement that advances an ideology of male supremacy, hatred of feminism, and a general belief that men deserve sex from women. According to a 2020 survey of incels.co forum-users, they are mainly young men who live with their parents and have never had meaningful or

## Links between Gender-based Violence and Mass Casualty Attacks

intimate relationships with women (Hoffman et al. 2020: 568; see also Everytown for Gun Safety 2022).

The first mass casualty attack recognized as being linked to the incel movement occurred in the United States in 2014, when a 22-year-old man attempted to attack a sorority house at the University of California. Prior to this, he had stabbed and killed three men when they arrived separately at his apartment. After failing to gain entry to the sorority house, he targeted random people on the streets of Isla Vista, shooting, stabbing, and ramming them with his vehicle before he shot and killed himself. He killed six people and injured fourteen others. Only two of the six killed were women. He left a lengthy manifesto that cited a ‘war on women’, his anger over rejection by women, and his inability to lose his virginity. He also posted numerous misogynistic videos outlining his serial rejection and resulting hatred of women (Hoffman et al. 2020: 569–70). There is increasing attention to online forums promoting and supporting misogynistic violence and the presence in those forums of people who commit or plan mass casualty attacks (Baele et al. 2019; Glace et al. 2021)

Hoffman et al.’s study (2020) on the incel threat maintains that such attacks are ‘predominantly a US and Canadian phenomena’, with total fatalities climbing to nearly 50 since 2014 (565), averaging almost eight fatalities per attack over half a dozen or so incidents (569). Since that study, there have been at least two more incel-related attacks: one in Canada in 2020 and one in the United Kingdom in 2021. The Canadian attack involved the stabbing death of a woman and the injury of a man and a second woman in Toronto (Lim 2020). The UK attacker fatally shot five people, including his mother, before taking his own life (Casciani & De Simone 2021).

Links between Gender-based Violence and Mass Casualty Attacks

The study of gender-based mass shootings in the United States (1966–2018) by Silva et al. (2021) found that 20 percent were motivated by grievances against women in general, with about half of these attacks also targeted at women in general (2172). Recent attacks by incels, as well as the longer history of misogyny-motivated attacks, highlight the relationship between misogyny, gender-based violence, and mass casualty attacks. There is growing recognition of misogyny as a form of violent extremism that cuts across extremist ideologies. Hoffman et al. (2020) have noted the connections between incel and the far right:

A particularly worrisome trend is how seamlessly the militant incel community has been integrated into the alt-right tapestry, with common grievances and intermingling membership bringing the two extremisms closer together (572; see also Silva et al. 2021: 2166).

A study by Lawrence et al. (2021) has identified a particular overlap between antisemitism and misogyny:

Most far-right ideologies ultimately aim to establish identity and status for white men who feel aggrieved. As far-right ideologies view the world as divided into strict hierarchies, the project of restoring status for white men revolves around subjugating women and minoritized ethnic communities. In the contemporary far right, dominance over women is achieved through both ‘protecting’ and attacking them, with both approaches overlapping, in differing respects, with antisemitism (8).

Moreover, the Anti-Defamation League has argued:

[A] deep-seated loathing of women acts as a connective tissue between many white supremacists, especially those in the alt right, and their lesser-known brothers in hate like incels (involuntary celibates), MRAs (Men’s Rights Activists) and PUAs (Pick Up Artists). This cross-pollination means the largely anonymous outrage of the men’s rights arena acts as a bridge to the white supremacist and anti-Semitic ideology of the alt right (Anti-Defamation League 2018: 5).

Sparrow (2019) has noted the interplay between extremist ideology and the 2019 mass shooting in Christchurch, New Zealand, in which a lone gunman killed more than 50 people at a mosque and in a nearby Islamic centre. Like many other right-wing extremists, the shooter had been radicalized solely online, in forums that were popular with misogynists and white supremacists. Wilson (2020) has examined the manifestos or statements by incels and white nationalist attackers, concluding:

## Links between Gender-based Violence and Mass Casualty Attacks

[T]hese waves of white genocide-inspired and incel violence stem not from two separate extremist ideologies. Instead . . . they are all driven by the same contemporary form of ‘racist misogyny’. The two ideologies are not merely complementary and overlapping, but interact to create a more volatile worldview, one which makes its proponents more prone to the use of violence. Misogyny and white genocide are synergistic, their effect greater than the sum of their parts (Wilson 2020: 8).

Recognition of misogyny as a form of violent extremism has been recently embedded in Canada with the addition of misogynist groups to listings of terrorist entities (FINTRAC Special Bulletin 2021). Recently, the United Nations Development Programme (2021) has called for misogyny to be more clearly understood as a ‘gateway’ to terrorism. The UNDP urges greater attention to misogyny and its interrelationship to all other forms of terrorism.

Beyond the various strands of right-wing extremism, white supremacy, and antisemitism, research indicates that hostility towards women is linked to other forms of violent extremism. A research brief by Bjarnegård et al. (2020) reviewing research on violence by male political activists in Thailand, as well as large-scale research on the attitudes and activities of both men and women carried out in Bangladesh, Indonesia, the Philippines and Libya, has explored the links between sexism and violent extremism, finding that:

Individuals—both men and women—with hostile attitudes towards women, and towards gender equality in general, are not just more prone to violent extremist views and to intolerance towards other nationalities and religious groups; they are also more likely to actually support violent groups and to participate in political violence (Bjarnegård et al. 2020: 1).

The case study below demonstrates the intersection of misogyny, antisemitism, and white supremacy in a ‘racist misogynist’ attack. It also highlights the way that misogyny can go unrecognized or be underplayed when considering the worldview and motivation of violent extremists.

*Case Study 2: Neo-Nazi Attack in Massachusetts*

On January 21, 2009, a 21-year-old self-described neo-Nazi visited the apartment of a 20-year-old Cape Verdean woman he had met at a local gym. Prior to attending the apartment, X had

## Links between Gender-based Violence and Mass Casualty Attacks

propositioned the woman at the gym but was rejected (Hamm & Spaaij 2017: 77 & 167). The woman was not home, but her 22-year-old sister answered the door. X threatened her with a gun, forced his way in, handcuffed and brutally raped her. When the younger sister arrived home during the attack, X shot her three times as she tried to run away, killing her before shooting the older sister seven times. Despite being shot, the older sister managed to escape onto the street, pursued by the attacker. Two men came to her rescue, one a man of colour. X fired at the man of colour but missed and drove away. X then shot and killed a Cape Verdean man he saw on the street before driving towards a synagogue, where according to the statement he gave police, he intended to kill as many 'Jews, blacks and Hispanics as humanly possible' before killing himself (quoted in Hamm & Spaaij 2017: 78). X was intercepted by police as he drove towards the synagogue. X fired on the police, who pursued him before he crashed into two other vehicles and was captured (Hamm & Spaaij 2017: 78).

Hamm and Spaaij's book (2017) on lone wolf terrorism in the United States includes a case study of this attack. They have noted that X had developed his racist and antisemitic beliefs online by reading postings on a neo-Nazi website *Passmate* (78–79). The intersection of white supremacy, antisemitism, and misogyny can be detected in both the nature of the attack and those who were targeted. X's attack began with the rape of one and the shooting of two women in their home and continued to include people of colour in general and a foiled attempt to attack a synagogue. It is clear that both the gender-based violence he committed and the more public attacks were planned. X attended the apartment of the two sisters with a 'rape kit', two hundred rounds of ammunition, and a firearm (Hamm & Spaaij 2017: 78). The statements X made to police also demonstrate a worldview in which racist ideology and misogyny intermingle. According to Hamm and Spaaij, X told police that 'he was angry about black men raping and killing white women on a "genocidal scale" and that the "Jew-controlled media" had done nothing to report it' (2017: 78). As those who have studied the relevant online sites and activities have argued, the concept of 'white genocide' and misogyny go hand in hand (Wilson 2020).

Hamm and Spaaij's case study, however, underplays the misogynist aspects of X's attack and worldview in the way it characterizes his interaction with the woman at the gym who he subsequently shot and killed. It does this firstly by describing his interaction with her as him making 'romantic advances' (2017: 77) and maintaining that the 'rejection of romantic overtures by a woman of color was the immediate trigger event' to the subsequent attack (167). An understanding of the intersection of racism, antisemitism, and misogyny contradicts the conclusion that X's interaction with the woman at the gym was 'romantic'. A newspaper report, not cited in Hamm and Spaaij's case study, states that X told police he had been turned down '100,000 (expletive) times' by women and that he did not want to die a virgin (Staff Reporter 2014). The statement fits the worldview of incels, who feel embittered by sexual rejection and whose adherents have been responsible for a number of mass casualty attacks. It is difficult to imagine that X's rejected advances towards the woman he would go onto murder were anything other than abusive, coercive, entitled, and intimidating demands that amounted to sexual harassment. Strengthening this conclusion is the fact that the woman X was rejected by was Cape Verdean, and X was a neo-Nazi who hated people of colour. It seems unlikely then that any romantic interests X may have harboured would extend to any woman of colour. The conflation of sexual harassment with romance in Hamm and Spaaij's case study obscures the

issue of the attacker's misogyny and misses the interplay between misogyny, racism, and antisemitism. The world view of X, expressed in his statements to police, his identification as a neo-Nazi, and his actions, including the brutal rape and the targeting of women, suggests that X's attempt to inflict mass casualties, was driven by a combination of racism and misogyny.

#### **IV. Further Research on the Connection between Gender-based Violence and Mass Casualty Attacks**

The connection between all types of gender-based violence and mass casualty attacks warrants further investigation. Recent research has laid the groundwork for exploring the connections, but further gender-focused data and analysis are needed to more fully explore these dimensions. Extant databases are incomplete in relation to the range of issues, histories, and characteristics that pertain to gender-based violence. In order to support further research, data collection needs to include information on the history of gender-based violence in attackers' backgrounds. This information should include any evidence of the commission of gender-based violence by the attacker and whether the attacker was exposed to gender-based violence in childhood. Data gathered should include any history of intimate partner violence and other forms of domestic and family violence, sexual assault, stalking, and harassment. Given the extent to which gender-based violence remains hidden and unreported, investigation of such histories should extend beyond formal reports to police or other government agencies. Such investigations should encompass any relevant statements made by the attacker (prior to or after the attack), as well as the recollections of friends, neighbours, relatives, intimate partners, or others who may have knowledge of or have been victims of gender-based violence at the hands of the attacker. There also needs to be full documentation of the status of any relationship between the attacker and victims of mass casualty attacks.

There is need as well for further research that focuses on mass casualty attacks, regardless of whether the attack was politically motivated or involved firearms. Siloed data needs

Links between Gender-based Violence and Mass Casualty Attacks

to be integrated and augmented with the types of mass casualty attacks that are typically excluded in order to provide a fuller understanding of such attacks and attackers. (Such synthesis can be found in recent work by Huff-Corzine and Corzine 2020 and Marganski 2019.) It is important to note, however, that there is value in retaining categorical data collection. The research on mass shootings, for example, has been crucial in providing a firm evidence base to support policies that seek to deny access to weapons to those who commit domestic and family violence and other forms of gender-based violence (see Issa 2019; Zeoli & Paruk 2020). Likewise, the role of misogyny as a feature of extremist ideologies and as a form of extremism itself also warrant further focused research attention.

There are also opportunities to open up new areas of studies on mass casualty attacks, following the lead of gender-informed studies. There is, for example, literature that demonstrates the heightened risk of intimate partner violence as a result of disasters, such as bushfires in Australia (Parkinson & Zara 2013). Research is emerging that shows a relationship between the global pandemic, particularly lockdowns, and a heightened prevalence of intimate partner homicide. Moffitt et al (2020) has focused on these increases in rural and remote areas of Canada; Humphreys et al. (2020) in Australia; and Usher et al. (2020) has reviewed global patterns. Given the close links between mass casualty attacks and intimate partner violence, research could be broadened to investigate any links between disaster and mass casualty attacks.

Future research on mass casualty attacks should also consider the potential gender bias in defining the scope and methodology of such studies. Studies on mass shootings that exclude those that occur exclusively in private space or involve only family members as victims reinforce the common misconception that mass casualty attacks mainly take place in public and involve

## Links between Gender-based Violence and Mass Casualty Attacks

random members of the public. As Huff-Corzine and Corzine (2020) have pointed out, such exclusions distort data and limit effective responses.

In studies on terrorism, there is a need to reconsider the theoretical frames that position women as ‘triggers’ of violence and look to what turns men violent. The former proposition implies that specific women have some responsibility for the violence when, like members of the public, they are often victims in attacks. The turning-point approach fails to fully recognize the evidence that many men who engage in terrorist violence are violent men who have escalated and expanded their violence from intimate partners and other women to include more random and public targets. In addition, close attention should be paid to gender bias in the classification of misogynistic motivated mass casualty attacks. It should not be assumed that such attacks do not meet the criteria for terrorism in studies in this field (see further discussion below).

**V. The ‘Public’ Consequences of the Failure to Understand ‘Private’ Violence**

As discussed above, specific women are often the first targets in mass casualty attacks, and attackers often have histories of violence against the specific women targeted and/or gender-based violence more generally. In retrospect it may be possible to discern the pathway to mass casualty attacks in attackers’ previous histories of gender-based violence. However, it remains almost impossible to predict that a particular person with a particular history of gender-based violence will engage in a mass casualty attack (see Cassam 2018: 204). Nonetheless, it is critical that police and security services are alive to the evidence that many men who commit mass casualty attacks have histories of gender-based violence. This recognition should prompt them to take such histories into account when assessing and managing an individual’s risk. Security agencies and police units charged with assessing the risk of mass casualty attacks and responding to such attacks need to include specific expertise in gender-based violence and be broadly

## Links between Gender-based Violence and Mass Casualty Attacks

educated in relation to the evidence of the links between what continues to be widely construed as discrete private and public violence. The following case study points to lack of gender-based violence expertise amongst those in charge of assessing public risk and responding to a siege and the consequences of this in assessing risk and responding to threats.

*Case Study 3: Sydney Lindt Café Siege*

On December 15, 2014, a 50-year-old man armed with a shotgun took eighteen staff and customers hostage during a seventeen-hour siege at the Lindt Café in Sydney, Australia. X claimed to be inspired by the terror group ISIS. He declared (falsely) that he had a bomb and was in contact with others who had bombs, which they would detonate if his demands were not met. During the siege, most hostages escaped on their own initiative. Several of them urged police to rescue the remaining hostages, believing that X would carry out his threats to kill them. Police raided the cafe after X executed the cafe manager. A second hostage was fatally wounded by police fire, as was X. Three other hostages were also seriously wounded by police fire.

Police were subsequently criticized for not entering the cafe prior to the execution of the manager. Deborah Snow (2018) in her book on the siege states:

It became clearer as the inquest [into the siege] went on that senior commanders had radically underestimated the threat ... [X] represented. They were lulled into thinking that the gunman was incapable of committing violence at his own hand. It was a deeply flawed understanding based on misreading the cues coming out of the cafe and his past (256).

X had an extensive history of gender-based violence. At the time of the siege he was on bail for 40 sexual offences between 2002 and 2010 against seven different women (State Coroner of NSW 2017: 65). He was also on bail for being an accessory (before and after the fact) to the brutal 2013 murder of his estranged wife, Helen Lee, by his new partner, Anastasia Droudis (Snow 2018: 50, 58–59). Prior to her murder, Lee complained to police that X had threatened to shoot her (56). Prior to the siege, X had come to the attention of national security agencies for matters unrelated to his perpetration of gender-based violence. His known history of gender-based violence was not considered relevant to the agencies' risk assessment. A review undertaken after the siege considered the risk assessment. It states:

[X's] acts of *personal violence* were exclusively directed towards women who he knew in one capacity or another, rather than towards the public at large. National security agencies assessed there was nothing to suggest [X] . . . was involved in terrorist-related activities (Dept. of the Prime Minister 2015: 62, our emphasis).

The thinking that 'personal' and public violence are separate phenomena was also apparent amongst those charged with responding to the siege. The following is taken from a recorded conversation between police negotiators and the psychiatrist during the siege:

Lead negotiator: He's not a violent man as such, he just likes a bit of power.

The psychiatrist acknowledges danger exists but asks: Does he have the ticker for it?

## Links between Gender-based Violence and Mass Casualty Attacks

A negotiator replies: I don't think he does.  
 'Because he got his missus to kill his other one.'  
 Lead negotiator: He doesn't do it. He gets someone else to do it.  
 (Australian Broadcasting Corporation 2017)

The conversation suggests being involved in the murder of a former partner is not a violent act in and of itself. It also suggests a fundamental misunderstanding of the dynamics of intimate partner violence and a lack of expertise in gender-based violence. Where there is evidence that a man has threatened to kill his former partner, and she is killed by his new partner, the man's history of gender-based violence should be closely scrutinized. In particular, the possibility that the new partner has herself been subjected to psychological and physical abuse by him should be strongly suspected. Criminal proceedings subsequent to the siege confirmed that X had abused his new partner. In 2016, Droudis was found guilty of Lee's murder. The judge maintained in the sentencing remarks that 'there was a level of abuse in the relationship between [X] and [Droudis], so his psychological persuasion of the Offender was fortified by a level of physical abuse' (*R v Droudis (No. 16)* [2017] NSWSC 20).

The (mis)characterization of the 40 prior sexual assaults likewise indicates a lack of insight into gender-based violence. The lead police negotiator said at the inquest: 'there was no anger or weapons used [in the assaults]. It was a passive sexual assault environment' and further that '[t]here's no violence there' (Australian Broadcasting Corporation 2017). The psychiatrist who provided advice during the siege repeatedly referred to the sexual assaults as 'acts of seduction' in his evidence at the inquest, demonstrating a failure to understand the distinction between seduction—which denotes a consensual interaction between parties—and sexual assault, which is a crime. Lack of consent is a defining feature of sexual assault. The Coroner investigating the siege deaths concluded X 'coerced [the victims of sexual assault] to submit to his demands without ever using physical force' (State Coroner of NSW 2017: 66; see also Snow 2018: 256). The misunderstanding of X's known history of gender-based violence as not really violence at all meant that the threat he presented when he came to the attention of the security agencies and later when he took hostages at the Lindt Café was not fully appreciated.

### 1. Policy and Practice Directions and Considerations

While gendered expertise and understanding are critical to better assessing the risk of and responding to mass casualty attacks, accurately assessing which individuals are at risk of carrying out such attacks will likely prove impossible. The key then to preventing the significant proportion of mass casualty attacks that are linked to gender-based violence is to better prevent gender-based violence. As Silva et al. (2021) have pointed out in their study of gender-based mass shootings, prevention efforts must target potential offenders *before* the initial event (i.e., before killing the specific victim) because when a mass casualty attacker targets a specific

## Links between Gender-based Violence and Mass Casualty Attacks

woman, there is typically no ‘cooling-off’ period between the killing or assault of the specific woman and the subsequent attack on others (Silva et al. 2021: 2178–79). Prevention efforts need to look to prevent gender-based violence before it occurs (primary prevention) and to better respond to gender-based violence when it does occur to reduce the risk of such violence escalating to homicide. (For extensive discussion of family violence prevention, see Royal Commission into Family Violence 2016.)

Gender inequality is widely recognized as the overarching driver of gender-based violence (see UN 2021). Primary prevention requires addressing gender inequality in all its dimensions—economic, educational, social, political, and cultural. There is no downside to such an approach. Human rights for all citizens and reduced incidence of gender-based violence, whether or not connected to mass casualty attacks, are consistent with inclusive and egalitarian societal aspirations.

Improved responses to gender-based violence, particularly intimate partner violence and intimate partner homicide, and connected to this improvement, the better prevention of mass casualty attacks, require a shift in policing organization’s priorities and practice. A recent UK report on violence against women and girls (HM Inspectorate 2021) has argued that while police cannot ‘solve’ such violence, they ‘have unique powers and responsibilities to protect victims from further harm, pursue perpetrators and prevent crime’ (1). Noting the inconsistent police response to violence against women and girls, the Report has argued that other areas of policy, such as terrorism and organized crime, ‘are generally marked by a clearer focus, better funding, a relentless pursuit of perpetrators and a clear sense that these are urgent national policing priorities’ (HM Inspectorate 2021: 2). The Report therefore has recommended elevating the priority given to policing violence against women and girls.

## Links between Gender-based Violence and Mass Casualty Attacks

Such reprioritization should not be equated with the allocation of more resources to policing generally, with additional police powers, or with the creation of new criminal offences. The evidence indicates that such approaches to gender-based violence risk the further criminalization of minoritized communities, particularly First Nations peoples, as well as the criminalization of women victims who are misidentified as perpetrators (see Goodmark 2018; Reeves & Meyer 2021; Walklate et al. 2019a).

The issue with inconsistent and inadequate police responses to gender-based crimes is not typically lack of resources, police powers, or lack of specific laws but rather failure to consistently implement extant policies and practice guides. The Australian Institute of Criminology (AIC) has conducted a metanalysis of research and data on policing responses in Western jurisdictions and found that specialist teams, secondary police follow-up to incidents, and more consistent investigative responses enhance outcomes for those experiencing domestic violence (Dowling et al. 2018). The consistent implementation of policy and practice should be supported by robust internal and external accountability mechanisms including attention to workforce training and development (Dowling et al. 2018; HM Inspectorate 2021). Research in Canada examining police responses and victim survivor experiences (Cormier & Woodworth 2008; Dawson & Hotton 2008; Peirone et al. 2021; Saxton et al. 2021) have identified the importance of training to challenge stereotypes and gender biases, and affirmative and consistent police responses to achieving both victim satisfaction and safety. Programs targeted at identifying and prosecuting perpetrators who abuse multiple women in serial intimate partner relationships should be implemented (Hamilton et al. 2021). Finally, police organizations should ensure that women (including women of colour and gender-diverse people) are strongly represented amongst police and in positions of leadership. Brown and Silvestri (2020) have

## Links between Gender-based Violence and Mass Casualty Attacks

focused on UK policing, offering evidence that such diversity significantly enhances policing responses.

Policing organizations also need to ensure that members who perpetrate gender-based violence—whether in the workplace or outside—do not use their position in law enforcement to avoid accountability and are appropriately sanctioned (see Pearson & Estcourt 2021). Finally, police organizations need to ensure that effective training is provided to all police about the dynamics of gender-based violence (see Segrave et al. 2018; and Jahirul Islam and Mazerolle 2022 in Australia; and reports by HM Inspectorate of Constabulary 2014; 2015 in the United Kingdom). In part, this training should emphasize that public statements that suggest, implicitly or otherwise, that gender-based violence might be justifiable, that victims are responsible for such violence, or that ‘private’ violence is less harmful or separate from public violence are inappropriate and dangerous. Such statements can encourage violence by adding to a sense of grievance and impunity amongst gender-based violence perpetrators. (For discussion on the danger of victim-blaming commentary, see Tomkinson et al. 2020: 159–61.) Media coverage of crime routinely includes police comment. Any shift in police statements about gender-based violence and mass casualty attacks will influence reporting. However, it is also important that media be given guidance on how to appropriately report gender-based violence and mass casualty attacks in order to avoid reinforcing the private–public violence dichotomy, including avoiding victim-blaming language and over-identification with perpetrators (see Gilmore 2019).

Intimate partner violence is the most common type of gender-based violence, and intimate partner homicide is the apex of this type of violence (Walklate et al. 2019b). Better prevention of such violence will require increased funding to programs and services that are designed to expertly assist the safe escape of victim/survivors and their children, including social

## Links between Gender-based Violence and Mass Casualty Attacks

services, health services, child support, disability, housing programs, and culturally diverse and culturally safe support programs (Davis 2020; Rauhaus et al. 2020; White et al. 2019).

With increasing recognition of the gender bias implicit in the exclusion of misogynist ideology from the extremist ideologies that are considered as political motivation, there is a shift towards classifying misogynistic attacks as terrorism (Hewitt 2021; Hoffman et al. 2020; Windisch 2020). In 2020, Canadian authorities, in what appears to be a world first, charged a teenager with terrorism over an attack that authorities consider incel-related (Lim 2020). In the wake of a recent incel-related mass casualty attack in the United Kingdom, there is also debate in that country about whether such attacks should be classified as terrorism (Casciani & De Simone 2021).

There is an emerging literature that supports the recognition of incel ideology as a form of violent extremism. Hoffman et al. (2020), following Baele et al. (2019), have argued that ‘the extreme fringes of the incel community, as well as the violence they have committed, should be considered terrorism’ (Hoffman et al. 2020: 568). Tomkinson et al. (2020) have argued in favour of ‘securitizing’ incel. They argue that this ‘would highlight that misogyny is a threat to public safety and delegitimize the misogynistic foundation of Incel ideology’ (158):

Without the elevation of Incel as a security threat, there is the risk that democratic governments, civil societies and public commentators fall back on conservative cultural attitudes applied to other misogynist crimes. Public efforts to address these crimes tends to be derailed by the notion that they constitute a ‘private issue’ and are therefore not the subject of political debate (156).

An argument against viewing incel as a terrorist threat is that it will expand the counterterrorism machinery, which has been convincingly critiqued as contrary to human rights, an imposition on the security of minoritized and racialized groups, and often counterproductive (see McCulloch & Pickering 2009; Roach 2003). Tomkinson et al. (2020) have recognized the problematic nature of extant counterterrorism frameworks and have recommended ways that

## Links between Gender-based Violence and Mass Casualty Attacks

securitization could be achieved without replicating these problems (158–64). It is not clear whether their suggested approach might be possible, given entrenched counterterrorism practices. It does appear clear, however, that *not* addressing incel as a terrorist threat constitutes gender bias, reinforcing ways of seeing threat and risk that normalize misogyny and gender-based violence. Additionally, if, as the research suggests, misogyny and right-wing extremism are mutually reinforcing, it is difficult to see how the latter can be effectively countered without countering the former. There is a need for further focused attention on the intersections of terrorism, mass casualty attacks, and misogyny (Everytown for Gun Safety 2022). An informed discussion about the optimal policy position that includes a focus on the extent, nature, and dangers of misogyny as a type of violent extremism that intersects with other types of violent extremism should be a step in a process towards arriving at such a position. Such a discussion should be educative and, in and of itself, part of the ‘solution’. As Antonio Guterres, United Nations Secretary-General, in an address to UN General Assembly in September 2019 stated, ‘There is a troubling commonality in terrorist attacks, extremist ideologies and brutal crimes: the violent misogyny of the perpetrators’ (cited in Johnston & True 2020).

Given incel is largely an online subculture, prevention and intervention strategies should focus on countering and identifying potential perpetrators online. This will require policymakers to (continue to) join with the technology sector, both to ensure that such strategies are effective and to assist that sector to develop and implement solutions aimed at limiting offensive and dangerous content and better protecting those harassed and targeted (see Anti-Defamation League 2018 for more detailed policy suggestions).

## VI. Conclusion

The connections between gender-based violence and mass casualty attacks have until recently been hidden in plain sight. Today a small but convincing body of gender-informed research brings the connections between these two species of male violence into sharp relief. Mass casualty attacks are widely conceived and constructed as public events that target random people in public space. Gender-based violence on the other hand, although increasingly recognized as a public policy issue, continues to be understood as private violence. The dichotomous thinking around private and public violence has obscured the continuities between these different but linked forms of violence. The key to better understanding, preventing, and responding to mass casualty attacks is to abandon the dichotomy and to recognize the flow that exists between such attacks and gender-based violence.

The research on mass shootings in the United States demonstrates that, contrary to popular belief, most mass casualty attacks take place in private spaces and involve men killing family members. The main victims of these shootings are specifically targeted women, often intimate partners, and children. Even when the definition of mass shootings includes only mass ‘public’ shootings (specifically excluding familicides and shootings that take place only in private spaces), the connections with gender-based violence are clear. A significant minority of mass ‘public’ shootings—that is, those that involve the targeting of random people and that take place at least partially in public space—also involve the targeting of a specific woman, often an intimate partner, as the first victim. In many of these cases, the attacker has a history of perpetrating violence against or harassment of the targeted woman and/or other women. There are indications that some attackers may also have been victims of or witnessed gender-based violence as children. Applying a nuanced and comprehensive gendered lens to the investigation

Links between Gender-based Violence and Mass Casualty Attacks

of these mass ‘public’ shootings reveals that existing boundaries between ‘public’ and ‘private’ violence may be obscuring or diminishing our capacity to identify and respond to the risks of mass casualty attacks: there is emerging evidence of a very real public risk of ‘private’ violence.

The research on terrorism, especially lone-actor terrorism, similarly demonstrates the intimate connection between mass casualty attacks and gendered violence. Many such attacks are committed by men with histories of gender-based violence and, like those who commit mass shootings, often include the assault or killing of specific women as part of their attacks. Also, in common with perpetrators of mass shootings, many of the men who commit terrorism appear to have histories of committing gender-based violence and/or histories of being witness to or victim of such violence as children.

A further gendered dimension of mass casualty attacks is demonstrated in attacks specifically motivated by misogyny. The rise in the number of incel-related attacks in particular highlights the threat of misogynistic violent extremism to both women in general and the public at large. The role of misogyny in mass casualty attacks and how best to counter this threat are only just beginning to attract research and wider law enforcement attention. The research has found a significant synergistic relationship between right-wing extremism and misogyny and makes clear that countering these two forms of extremism needs to take place in tandem. Research also shows that hostile and sexist attitudes towards women are a driver of violent extremism of all types.

There is a need for more gender-informed research to understand the scope, nature, and nuances of this connection. Building such an evidence base will require a shift in research frames that attempt to corral and distinguish ‘private’ and ‘public’ violence. Definitions of mass casualty attacks should focus on the harm done or attempted, rather than on the relationship between the

## Links between Gender-based Violence and Mass Casualty Attacks

attacker and the victims or on whether the violence occurred in public or private space. Such dichotomous framings distort the reality of the flow of violence from the ‘private’ sphere of gender-based violence to the public sphere of mass casualty attacks, which the evidence shows are often gender-based. Where research moves beyond the distortion of the public–private dichotomy, it becomes impossible to deny the intimate connection between mass casualty attacks and gender-based violence. The research demonstrates that the ‘family man’ is not the antithesis of the mass murderer, and the home, rather than being a haven, is too often a major crime scene.

The policy implications of the research are clear. In order to better understand, prevent, and respond to mass casualty attacks, there is a need to better understand, prevent, and respond to gender-based violence. In the overwhelming number of cases, those who commit gender-based violence will not commit mass casualty attacks—though many of those who do commit such attacks have histories of gender-based violence, and many such attacks are gender-based. While it is important that agencies that assess the risk of mass casualty attacks include gender expertise, in most instances, accurately predicting the exact who and when of an attack will prove elusive, if not impossible. Preventing everyday gender-based violence is critical, then, in preventing mass casualty attacks. Amongst the raft of policies and programs needed to do this, challenging the popular (mis)conception of the private–public violence dichotomy and associated meanings and responses is important. Such framings create the illusion that violence can be neatly categorized, distorting the reality of the spillover of violence from the ‘private’ sphere of gender-based violence to the ‘public’ sphere of mass casualty attacks.

## Preamble

The following report was commissioned by the Mass Casualty Commission to explore the issue of police reform, the challenges of rural and community policing, and the current RCMP model for policing rural communities. The opinions and substance of this report are based on the authors' extensive personal experience and first-hand knowledge of the subject matter and reviews of the relevant academic and policy literature and research.

The authors' central thesis is that, due to rising costs, limited police resources, traditional policing philosophies, and unique geographic challenges, rural policing in general and the RCMP in particular have adopted a limited "reactive" service model. The standard reactive policing model focuses on responding to calls for service with limited investment in preventative policing and community engagement. Lacking community involvement, the reactive policing model is less effective in both responding to and preventing problems of community crime and safety. We believe that a "community-engaged rural policing model" can overcome some of the unique challenges and problems of rural policing.

We make this argument by first outlining the history and evolution of modern policing and police reform and the RCMP's attempt to introduce community policing. We identify the unique challenges of rural policing in general and the problematic delivery of community-engaged policing services. In this context we review RCMP contract rural policing and its limitations as a model of community-engaged policing. We then outline the core principles, organization, and best practice strategies of community-engaged policing. We conclude by reviewing the pros and cons of three alternative models for delivering community-engaged rural policing: the RCMP detachment policing model, the local municipal policing model, and the provincial policing model.

This report aims to contribute to the ongoing conversation about improving the effectiveness of rural policing and the safety and security of rural residents and communities in Nova Scotia and elsewhere. While it is co-authored, Chris Murphy took the lead on the sections addressing general academic policing and policy literature, while Cal Corley took the lead on RCMP-focused literature and policy documentation. Both authors are equally responsible for the final product.

## About the Authors

Over the course of a 30-year academic career at Dalhousie University and the University of King's College, Dr. Chris Murphy's research and written work focused primarily on Canadian policing, with an emphasis on community-based policing reform. Having grown up in Antigonish, his PhD thesis (1986) was on small town RCMP and municipal policing in Nova Scotia, and he has written about and consulted with Canadian police services, including the RCMP, on a variety of policing issues.

Cal Corley is the Chief Executive Officer of the Community Safety Knowledge Alliance Inc., a non-profit organization that supports governments and others developing, implementing, and assessing new approaches to improving community safety and well-being outcomes. Cal is a former RCMP Assistant Commissioner and Director General of the Canadian Police College. His career included rural and small-town policing in Alberta and the Northwest Territories. He has also

served at the Privy Council Office’s Security and Intelligence Secretariat and at Public Safety Canada.

**PART 1**

**POLICE REFORM, COMMUNITY POLICING,  
AND THE RCMP**

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

## A. Police Reform: An Overview

Despite the commonly held view that the police are an insular and static institution resistant to change, the history of policing is marked by periods of transformational and incremental reform and change. Police historians Kelling and Moore (1988) identified distinct periods of transformational police reform, each one a response to a particular mix of political, social, and economic pressures and the limitations of the conventional police model of the day. Periods of significant reform are followed by periods of modest incremental change or a gradual return to previous police practices. Throughout history, police have tended to resist substantial reform, making change challenging to implement and difficult to sustain.

### Inventing the Police (1829–1920)

The creation of the first British public police by Sir Robert Peel in 1829 was itself a radical reform of the existing informal and inefficient system of eighteenth-century public and private policing in England. The introduction of a government-sponsored public police was considered so radical that it was strongly resisted by royalty, elites, and much of the public, at least initially (Silver, 2011; Brodeur, 2010). This new government institution introduced the fundamental principles of democratic policing. Peel's principles established policing by consent and not force; police independence from political control; legal, not political, authority; the exclusive right to use legal force; the military bureaucratic model of police organization and discipline; the police as representatives of the public; and that police effectiveness be measured not just by enforcement but by the "prevention" of crime and disorder. These policing principles remain the aspirational characteristics of Western democratic policing (see Manning, 1997: 48–71).

With the exception of the RCMP, which originated under a political colonial military policing model (MacDougall, Brown, & Brown, 1973; Marquis, 2016), the British policing model became the model for urban public policing in colonial North America. However, something got lost in the translation, and Peel's independent police became a politicized institution of often corrupt local urban government.

While the police were located in urban neighbourhoods and had broad policing functions, they enforced laws selectively and largely in the interest of the politically powerful. Widespread government corruption led to extensive police corruption and, combined with the challenges of policing Prohibition, the growth of organized crime, urban crime, and class conflict, created police forces that were generally inefficient, corrupt, violent, prejudiced, uneducated, and thoroughly unprofessional (Walker, 1977). The popular slapstick version of police as the "Keystone Cops" reflects the public image of that policing era. While in Canada the development of public policing in the nineteenth century was not marked by the same degree of political corruption, urban police operated in much the same unprofessional manner as their American counterparts (Marquis, 2016).

### Professional Police Reform (1930–1960)

Control over police by local politicians, conflict between urban reformers and local ward leaders over the enforcement of laws regulating the morality of urban migrants, and abuses (corruption,

**PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP**

for example) that resulted from the intimacy between police and political leaders and citizens produced a continuous struggle for control over police during the late 19th and early 20th centuries (Kelling & Moore, 1988).

The corruption of local government and policing generated a progressive political reform movement in the United States, which tried to professionalize law enforcement through formal rules, bureaucracy, and modern management (Lane, 1992). To limit corruption, the police were bureaucratized and centralized. Police officers were withdrawn from their neighbourhoods so their activities could be directly supervised, and their policing activities were narrowed to emphasize law enforcement and crime. Neighbourhood foot patrols were replaced by mobile patrols of patrol districts, responding primarily to radio dispatch and calls for service. Police science and new technologies were introduced, which upgraded and professionalized the criminal investigation function and enhanced its effectiveness and status (Walker 1977).

The shift from an unprofessional but broad neighbourhood policing model to one emphasizing bureaucratic organization, mobile patrol, responding to calls for service, and measuring success in crime and clearance rates became the essence of the so-called “professional” reform policing model. While the professional model largely eradicated the politicization, inefficiency, and corruption of the previous policing era, it did so at a cost to other important fundamental aspects of the police function (Kelling et al., 1977). Withdrawing police officers from urban neighbourhoods meant losing their connections with and knowledge of the citizens and neighbourhoods they policed. Without regular non-enforcement contact, the police became distant and remote law enforcers with little understanding of the communities they were policing. Almost exclusively white, male, and blue-collar, they enjoyed considerable discretion in enforcing the law aggressively, selectively, and disproportionately on poor and marginalized communities. By the 1960s, the standard model of modern policing in both the United States and Canada was increasingly at odds with the rapidly changing American and Canadian society.

**Community Policing Reform (1970–2000)**

North American society, culture, and politics changed dramatically in the 1960s and 1970s. Growing social and economic inequality, racial injustice, and youthful political and social protest combined with increasing crime rates generated a series of critical challenges to the professional model of policing. Lacking a positive community presence, the police had increasingly become a blunt instrument of law enforcement and were seen as biased defenders of the status quo in the political and racial conflicts of the day. But perhaps even more problematic was that the supposed crime-fighting model was proving to be ineffective in dealing with the dramatically increasing urban crime rates of the 60s and 70s.

During this period, the police became the subject of critical government and academic scrutiny. Responding to urban riots and police abuse, governments and the academic community began to challenge the basic assumptions of the professional policing model. Research questioned the effectiveness of centralized bureaucratic management, the effectiveness of random motorized patrol, the utility of rapid response to calls for service, and the lack of positive police presence in urban neighbourhoods (Murphy & Muir, 1985). Conventional police practices such as the traditional

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

response to domestic violence, widespread discriminatory and racialized policing practices, and the discretionary use of excessive force were studied and critiqued, eventually leading to an increasingly powerful movement for reform, change, and the exploration of alternative policing models and strategies.

The proposed reforms and changes focused on reorienting policing philosophically, organizationally, and operationally towards re-establishing a better relationship with the public, especially in urban neighbourhoods and communities. The “community-based policing reform movement” was initiated in the United States and spread to Canada and most Western countries in the 1970s, 80s and 90s, becoming the preferred, “progressive” model of public policing. Kelling and Moore (1988) provided a summary of its key characteristics:

The measures of success in the community strategy are broad: quality of life in neighborhoods, problem solution, reduction of fear, increased order, citizen satisfaction with police services, as well as crime control. In sum, the elements of the community strategy include: Authorization—community support (political), law, professionalism. Function—crime control, crime prevention, problem solving. Organizational design—decentralized, task forces, matrices. Relationship to environment—consultative, police defend values of law and professionalism, but listen to community concerns. Demand—channelled through analysis of underlying problems. Tactics and technology—foot patrol, problem solving, etc. Outcomes—crime reduction, community safety, quality of life, and citizen satisfaction (Kelling & Moore, 1988: 11).

With the backing of governments, universities, and some progressive police services, a host of experimental and innovative community policing projects and programs were initiated in the 1980s and 90s throughout North America. In Canada, the federal government and some provincial and municipal governments supported a variety of new community policing programs and projects such as the decentralization of police organization (Halifax), the introduction of neighbourhood policing (Edmonton), the establishment of police sub-stations and storefronts (Edmonton and Fredericton), the creation of neighbourhood team policing (Ottawa), the reintroduction of foot patrol (Halifax), the use of community surveys and public meetings (Toronto), the use of community crime analysis (Ottawa), and the expansion of crime prevention programs everywhere. By the 1990s, virtually all major urban police services in Canada had introduced some form of community policing with varying degrees of commitment and competence (Murphy, 1988).

Some community policing programs and initiatives enjoyed demonstrable success, including improved community relations and communications, increased public support for police, improved information exchange, enhanced sense of community security, and the reduction of some forms of crime and disorder (Crowl, 2017; Corder, 1996). But community policing outcomes were vague, less tangible, and harder to measure than arrests, crime rates, calls for service, and clearance rates. As a result, over time many community policing projects did not receive ongoing support in the battle over scarce resources and rising crime rates. In many police services these new ways of policing were also resisted by the rank-and-file police and were dismissed as public relations exercises—nice, but of far less importance than “real police work” (i.e., law enforcement and crime functions). Seldom consulted in the design and implementation of these community projects, police resisted the changes required make the programs effective, preferring the more familiar

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

professional model and police functions that they'd been selected and trained for (Skogan & Hartnett, 2019; Skogan, 2004).

Despite 20 to 30 years of high-profile community policing reform and innovation, the conventional reactive policing model remained fundamentally unchanged, driven by increasing crime rates and escalating calls for service. By the beginning of the new millennium, most of the ambitious community policing programs had lost their original zeal and support and were either modified, downsized, or abandoned (Kerlikowske, 2004). Community policing programs, like neighbourhood policing, foot patrol, storefront and community stations, etc. simply faded away or played a greatly diminished role in a gradual return to the reactive policing model of responding to calls and investigating crime.

### The Current Police Reform Era (2000–2022)

By 2000, community policing had become at least part of the official public rhetoric of North American policing, though in practice it was no longer the central “operational” philosophy that organized and delivered police services. But the community policing era had at least established that communities had a right to hold the police accountable, especially in marginalized and diverse communities of interest. Since 2000, there have been a variety of new public and political pressures for police reform and change that are having an impact on North American policing in the twenty-first century.

The issues of discriminatory policing and use of deadly force in marginalized ethnic and racialized communities have dominated recent police reform discourse, especially in the United States and, to a lesser extent, in Canada. In the United States, incidents of deadly force against racial minorities gave rise to the Black Lives Matter movement and its demands for serious transformative police reform. In Canada, attention has focused on the use of systemic and discriminatory policing strategies, such as the use of street stops, carding, and the questionable use of force. Canadian police have had to reconsider and eliminate some of these discriminatory practices by ending carding and street stops, introducing body cameras to monitor citizen–police interactions, and developing more accountable relationships with diverse communities and groups.

In response to public pressure, Canadian police have also been forced to become more diverse and representative of the society they serve. This has meant overhauling their recruiting and training practices to ensure far more gender-diverse and racially diverse workforces. Internal reforms and programs aimed at dealing with issues such as sexual harassment and racism have been introduced in most police services, though their effectiveness remains to be determined. Heightened public interest in more effective police governance and increased police accountability has led to the development of more diverse and independent police governance bodies, such as civilian review and local police boards.

A tangible legacy of the community policing era has been the development of collaborative multiagency community safety initiatives, such as the Hub model (discussed further in Part III below), which was adapted from the United Kingdom and pioneered in Saskatchewan (McFee & Taylor, 2014). Collaborative police–community problem-solving programs are now in operation in

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

many communities in Canada. The Hub model broadened the scope of policing beyond reactive law enforcement to include risk analysis and collaboration with community agencies to identify and respond pre-emptively to problematic or at-risk individuals and threats to community health and safety.

New digital information technologies and the spread of social media have resulted in the development of data-driven policing. It has taken a variety of forms, such as sophisticated crime analysis, intelligence-led policing, evidence-based policing, crime profiling, and predictive policing (Meijer & Wessels, 2019). These new data-based analytic strategies are meant to better inform conventional policing and investigations and allow for increased internal accountability and efficiency. Police have also been experimenting with various forms of social media as means of improving communication and information exchange with the public and as an investigative tool (Beshears, 2017). While not necessarily classified as reforms, these do represent significant change in police practice.

In the United Kingdom, government concern about the cost and value of government services prompted a review of British policing (see Barton, 2013). As a result, they introduced a number of major policing reforms such as increasing professionalism through post-secondary education, enhancing local police accountability, expanding the use of social research, emphasizing evidence-based policymaking, privatizing selected police services, and introducing new service delivery models (e.g., neighbourhood policing and the creation of community service officers). These significant organizational, educational, and operational changes have made England an influential source of innovation and change in modern policing.

But perhaps the biggest pressure for change in Canadian policing has been the escalating costs of public policing (see Griffiths, Murphy, & Snow, 2014). Canada spends more on public policing, on fewer police per capita, than almost any country in the Western world. Given the increasing demand for police services to deal with both conventional and new policing demands, the cost of policing presents a significant challenge for all levels of government. As a result, police are increasingly rationalizing their services by giving priority to more serious “core” crime and disorder problems, while limiting their resources and responses to non-core community policing issues and problems (Leuprecht, 2014). Current trends suggest that unless there are significant increases in public spending or significant changes to the current service delivery model, police agencies will become increasingly limited to serious crime and disorder problems at the expense of other important social and preventative policing services.

The cost of policing and the police role and effectiveness is being raised by the Defund the Police movement. The effectiveness and desirability of using uniformed police to deliver some socially-oriented policing services—such as responding to mental health calls and community youth and prevention programs in minority communities—have been questioned by community groups and healthcare advocates. However, whether relegating these important policing functions to the community would result in an improvement in those policing services remains an open question. Minimally, it suggests that the police need to better demonstrate to the community the importance of their role and their willingness to improve or reform past practice. Clearly these particular policing issues require a greater commitment to community-based and collaborative policing.

COMMUNITY-ENGAGED RURAL POLICING:  
THE CASE FOR REFORM AND INNOVATION IN RURAL RCMP POLICING

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

Unless the police can demonstrate why their involvement in these activities is necessary, they will find themselves even more removed from the communities they police and become limited to a narrow crime and law enforcement role. This movement does make it clear that police need to justify their performance if they wish to retain a role in these traditional police functions.

Whether today's police—using policing philosophies, organizational models, and operational strategies developed in the past—are capable of responding to current pressures and challenges without significant reform and change, is questionable.

Police services have been organized for an old reality. Fundamental changes that have taken place in the safety and security landscape over the past few decades have not been reflected in police institutions. From the changing nature of harm to changing demands of policing to a wealth of new knowledge about how to best respond prevent crime, these changes define the present-day landscape to which police services must adapt if they are to improve the effectiveness and efficiency with which they deliver safety and security (Council of Canadian Academies, 2014: 151).

### Police Reform Barriers

Our review of the literature uncovered a number of reasons why despite the many attempts to reform the police, things largely remain the same and effort to introduce change within the police sector has been described as bending granite ... Finally, while generalizations are hazardous our review of the literature suggests that police reform is difficult and risky and that efforts to implement transformational change within police organizations are likely to either fall short of expectations or fail (Duxbury et al., 2018: 319).

The history of police reform indicates that transformational reform and change have happened during distinctive political and social circumstances and incrementally in response to specific ongoing events, social and political circumstances, new technology, and new knowledge. However, with some exceptions, these changes and reforms have been resisted by the police, which has given substance to the term "bending granite" as a metaphor for police change (Duxbury et al., 2018) The following are some of the identified barriers to police reform.

A review of police reforms in the modern era conducted by policing scholar David Bayley (2008) has found that significant police reform is almost always generated by political, social, and academic forces outside the police and seldom initiated or led by the police themselves. Police reforms are typically external, or "outside in," and are internally implemented in a "top-down" approach, usually because of public and political pressure generated by incidents or events that have created a crisis of public confidence in the police. Bayley has noted persistent resistance by rank-and-file police officers to so-called progressive change. He has suggested this is a result of their lack of involvement and investment in the change process and the powerful protective police culture that tries to maintain control over their "risky" work environment.

A recent study of readiness to change in Canadian policing by Duxbury et al. (2018) asked a group of police and community stakeholders to identify and prioritize both the external and internal drivers and barriers of police reform and change. Their study identified the following barriers to significant police reform and change.

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

The study identified two major *external barriers* to change:

- Changing Community Priorities – Today’s changing and diverse communities often have different policing needs and priorities, making appropriate police response challenging.
- Lack of Political Support – Public and political pressure and support for policing change is often limited and transient, making lasting change a risky investment for police.

The following *internal barriers* to change were identified:

- Lack of Police Resources – Most police resources are committed to conventional police activities. New activities or initiatives require either new resources or resources must be reallocated from other activities; both are problematic.
- Organizational Culture – Police have a strong risk-averse and protective organizational and occupational culture that resists meaningful change.
- A Lack of Police Leadership – Most senior police leaders lack the authority, leadership experience, and education required to lead and manage significant organizational change in a change-resistant organization.

Overall, the history of police reform suggests that occasional *transformational change* in policing is possible under a particular but unusual set of social and political circumstances; it requires political will, public support, and police collaboration. *Incremental change* or improvements or adjustments to conventional police practices is far more common and easier to implement but has less impact. Faced with the choice of transformational or incremental change, police tend to resist more radical or risky change and accept incremental change, as it doesn’t threaten the conventional delivery of core policing functions.

While the conventional professional model of police service is reasonably effective in meeting most core policing demands, it is less successful in reducing those demands and addressing new diverse policing and security needs. However, there are innovative and strategic ways of organizing and delivering policing services that can improve the standard police model and better address increasingly diverse community safety demands.

While the proposed changes outlined in this report may not be transformational, they are nevertheless significant and address some of the obvious shortcomings of the current reactive policing model. Proven policing strategies, programs, and models can advance conventional policing in ways that better align with the realities and challenges of policing today’s communities. With adequate political will, vigorous public demand, and progressive police leadership, the history of police reform demonstrates that granite can indeed be bent.

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

## B. RCMP Reform, Change, and Community Policing

To understand RCMP culture and its implications on the organization's ability to adapt and respond to the ever-changing environment within which it operates, one should first look to its origins. Established in 1873, the North-West Mounted Police was a paramilitary-style police force modeled after the Royal Irish Constabulary. In that era, this paramilitary-style police was employed throughout the British Empire to police colonial populations.

Unlike the civilian Peelian model adopted in Britain, the paramilitary model's authority did not flow from public consent, cooperation, and accountability (Murphy & McKenna, 2007). The model featured strong command and control, strict internal discipline, and military-type training that focused on establishing a high level of internally focused loyalty, conformity, and group homogeneity. Such discipline extended throughout all strata of the organization.

In 1928, eight years after the Force was renamed the Royal Canadian Mounted Police (RCMP), Saskatchewan became the first province to contract with the RCMP to provide provincial policing services. This was followed in 1932 by Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, and Alberta. British Columbia joined this group in 1950. In a matter of 22 years, contract policing became the RCMP's largest business line, with the organization represented at three levels of government. The pre-existing centralized, highly bureaucratic organization and leadership culture was well suited to support and maintain internal control, given the new level of complexity, size, and scope of policing operations.

In the ensuing decades, the prevailing RCMP organizing principles aligned with the professional policing model, which emphasized patrol, timely response to calls for service, and the investigation of crime. This traditional model positioned the police as the "community's professional defense against crime and disorder," with citizens cast as "relatively passive recipients" of services (Kelling, 1988). The professional model relied on top-down, hierarchical management structures supported by command-and-control leadership, systems, policies, and procedures. There was distance between the police and communities.

As community policing became—at least for a time—the central organizing philosophy for police services across Canada, the RCMP eventually and somewhat reluctantly adopted community policing in 1989 as its official organizing philosophy for future service delivery (Conference Board of Canada, 2000: 4). This was borne out of a realization that the professional model was insufficient in addressing many of the safety and social issues facing communities and that communities wanted and needed to be more involved. After all, much of day-to-day policing in Canada relates to social issues, not crime (Taylor et al., 2022: 88). As will be explored further in this paper, the RCMP's implementation of community policing remains inconsistent and incomplete.

The RCMP's rigid paramilitary, rank-based leadership culture, management structures, and policies were not compatible with implementing an effective community policing model as its organizing philosophy. These bureaucratic paramilitary characteristics impeded the quality of internal and external communication, limited creative problem-solving and decision-making, and discouraged innovation and critical thinking while they reinforced conformity and common worldviews

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

(Conference Board of Canada, 2000: 4). Furthermore, such organizational culture tended to value action over reflection and censure individual differences within its ranks (Taylor et al., 2022; Stamper, 2006).

The community policing era required decentralized and flattened organizational structures and the diminishing of command-and-control leadership, except in critical operational instances. Effective leaders in the community policing era had to excel at developing and maintaining healthy partnerships with community and other partners, engage in joint problem-solving, and shape a culture that placed as much value on crime prevention and community policing as it historically did on enforcement and investigating crime. Finding balance between these two sides continues to be an issue in policing, including within the RCMP.

### RCMP Organizational Reform

Over the past 30 years, the RCMP has been in a near-continuous cycle of externally driven organizational change as it strives to adapt and respond to the rapidly changing and complex political and social environment in which it operates. The result has been a series of significant reform initiatives stimulated by a variety of internal and external political pressures. Some of the key parts of this recent history include:

- Community Policing (1989–present)
- Project Renewal (1993–2000)
- Shared Leadership: Mission Vision and Values (1995–1999)
- Regionalization (1996)
- Alignment Initiative (1998–1999)
- Task Force on Governance and Cultural Change in the RCMP (2007–2009)
- Vision 150 (current)

While there were certainly some successes derived from each of these, there have also been marked failures. For the purposes of this report on community-engaged policing, we focus on two of the most relevant reform initiatives: Community Policing and the Task Force on Governance and Cultural Change in the RCMP (also known as “the Brown Task Force”).

#### Community Policing (1989–present)

While community policing spread throughout North America during the 1970s and 1980s, it was not until 1989 that the RCMP decided it was time to join the movement. The top-down community policing directive came by way of a commissioner’s announcement (see Conference Board of Canada, 2000), which took many in the organization by surprise, as there had been little consultation (Conference Board of Canada, 2000). RCMP detachment commanders were instructed

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

to get started immediately by establishing community consultative groups. There was no supporting roadmap, tools, or other supports to guide and assist the divisions and detachments implement such transformative change. This led to considerable confusion as to what this change meant and how it would be rolled out and practiced (Conference Board of Canada, 2000: 10). It was not until early 1993, in the face of implementation challenges, that a new Assistant Commissioner was appointed with the clear mandate to turn things around. Pilot projects were implemented, and training was developed and implemented. It was not until 1995 that the first recruits graduated with training that had a strong emphasis on community policing and associated problem-solving skills (Conference Board of Canada, 2000: 11).

The effort to adopt community policing as its operating philosophy also came with challenges to the centralized organization and culture of the RCMP. Effective community policing requires decentralized and flattened organizational structures to support sophisticated adaptation and innovation in collaborating with others to solve adaptive problems. But the existing rigid, internally focused, paramilitary management structures, top-down command-and-control systems, policies and leadership practices were deeply entrenched in the RCMP's DNA. These attributes are seemingly reaffirmed by *The RCMP Act*, which requires members to obey lawful orders, oral or written, of any member who is superior in rank or who has authority over that member.

These contradictions presented significant hurdles that continue to impede RCMP change efforts. By way of example, senior officers at RCMP Depot may believe that they are producing police officers who are ready and prepared to practice community policing, but recruits who are about to graduate often say they most look forward to "putting bad guys in jail." The power of the enforcement and investigation culture endures.

The introduction of community policing is illustrative of the RCMP's ongoing challenges with implementing transformative change. Some of the key lessons that ought to have been learned from that experience were not consistently applied to future change endeavours.

#### The Brown Task Force (2007–2009)

In April 2007, David Brown was appointed as Independent Investigator for the Minister of Public Safety and the President of the Treasury Board to examine and make recommendations relating to the RCMP's handling of reports of internal mismanagement and irregularities in the administration of the RCMP pension and insurance plans. The Brown Task Force, as it became known, issued two reports, *A Matter of Trust* (June 2007) and *Rebuilding the Trust* (December 2007). In these, Brown identified a number of issues that have hampered the RCMP from being the contemporary policing service it aspires to be.

#### LEADERSHIP

Brown observed that aspects of RCMP leadership culture ran deep and were unhelpful in achieving reform. He noted a management culture of entitlement and command and control, reflective of its paramilitary roots. It is noteworthy that more progressive leadership occasionally does emerge but can be transitory as more traditional leadership approaches steeped in command and control dominate. Dramatic changes in leadership styles occasionally occur that have significant

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

implications for reform and alignment. Brown cited the example of Commissioner J.P.R. Murray's term as commissioner (1994–2000), during which he modeled a contemporary shared leadership style. His successor flatly rejected shared leadership—"Shared leadership is not in my vocabulary"—adopting a highly autocratic approach to leadership and decision-making (Task Force on Governance and Cultural Change, 2007a: 41–42).

## CULTURE

Brown expressed significant concern about an abusive work environment and a culture of entitlement at the top of the RCMP. He noted that indications of a "deteriorating culture" were evident as early as 2003, as shown by the work of Dr. Linda Duxbury, who led significant RCMP-related studies in 2001 and 2004. Duxbury's survey and interview-based studies of the RCMP workplace environment and culture revealed an organization ill-prepared to undergo change. She found that while RCMP employees worked hard, were proud of the organization, and were driven to contribute to Canadian society, only thirteen percent of RCMP participants in the 2004 study felt the organization did a good job of managing change.

In a November 2007 report prepared for the RCMP, Duxbury stated that:

- The RCMP is not a change-ready organization;
- Its internal culture does not support change;
- It lacks expertise, depth, and corporate knowledge in key areas; and
- RCMP members are carrying chronically high workloads (Duxbury, 2007: 6–8).

Duxbury concluded that the RCMP would continue to struggle with significant reform unless it dealt with a number of systemic underlying issues, including its traditional organizational culture (Duxbury, 2007: 5).

Brown also expressed concern over reluctance within the RCMP to speak truth to power. He noted that the tradition of unquestioned obedience to lawful orders, combined with a high control culture—something that Commissioner Murray eschewed during his tenure—was an impediment to productive collaborative decision-making and stewardship.

The cultural issues that have led to the result that has been so embarrassing for the RCMP continue today and must be addressed comprehensively. This must involve structural and process changes to realign the culture of the RCMP with the Force's own vision and values and with the expectations of Canadians. (Task Force on Governance and Cultural Change in the RCMP, 2007a: 45)

The Task Force also heard many instances of the RCMP's inability to follow through on the implementation of new policies and programs, a consequence of inadequate implementation and planning (2007b: 44). This report argues that this is precisely what impeded the full implementation of community policing that began in 1989.

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

### MANAGEMENT STRUCTURES

The highly formalized and bureaucratic paramilitary structures that support the current culture also continue to support its insularity and hampers the organization's ability to respond efficiently to its evolving operating environment.

### CAPACITY CHALLENGES

The Brown Task Force concluded that the RCMP was chronically struggling to meet its obligations; never operated at full capacity, and often with unacceptable vacancy rates; and its lack of resources was systematically putting undue pressure on its members. The Task Force noted that internal RCMP research capacity, such as the former research centre at the Canadian Police College, had been unfortunately eliminated.

Finally, the Task Force indicated that to achieve successful change and reform going forward, the RCMP would require a "much higher degree of managerial competence and sophistication than which is currently found within the RCMP" (2007b: 1). The report went on to state, "The RCMP can only address the issues raised in this report and position itself to meet the inevitable future challenges it will face by enhancing its leadership capabilities and by programming modern management principles into its DNA" (5).

To support the successful RCMP implementation of its recommendations, the Task Force recommended that the government establish an external implementation council to guide advise and drive the change process.

### Reform Implementation Council

Subsequent to the Brown Task Force, the Reform Implementation Council (RIC) was established in early 2008 to guide, advise, and drive the reform process within the RCMP. RIC issued the last of its four reports to government in March 2010. In its closing report, after two years of supporting change, RIC stated that RCMP reform was entering a new phase. Its focus on the specific Task Force recommendations was now giving way to a new approach of promoting continuous change within the RCMP: "The RCMP is transforming how it is led and managed, how it uses its human and financial resource is and how it communicates with partners, stakeholders, employees and the Canadian public" (RCMP Reform Implementation Council, 2010: 2).

The RIC noted that while the RCMP had achieved a great deal, still more needed to be done if it were to continue evolving in the direction of its "Vision for Change," which defined the purpose of its internal reform and provided a framework to support the desired changes "to become an adaptive, accountable, trusted organization of fully engaged employees demonstrating outstanding leadership and providing world-class police services" (RCMP RIC, 2010: 7-8).

Among other things, the RIC noted that:

- The RCMP was making steady progress to improve its systems for defining resource requirements for operational policing and that this must remain a high priority;

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

- Continued transformation of the RCMP must not be impeded by lack of human and financial resources, which had grown more slowly than expected;
- Improved communications with the public must be a priority of transformation;
- Management must lead the way to a more open and transparent culture throughout the RCMP; and
- Major challenges remain if the culture of the RCMP is to be fundamentally reshaped (RCMP RIC, 2010).

### Analysis: The Challenges of Change/Reform in the RCMP

Based on our analysis of the available evidence, there are some fundamental reasons why the RCMP has struggled with implementing transformative change: lack of resource capacity and limited internal commitment and capability.

For the purposes of this report, by *capacity* we mean the organization's capacity to fulfill its mandate and implement successful reform. *Capability* refers to the knowledge, skills, and abilities required to fulfill the organization's mission and to reform the organization.

#### Capacity Gaps

- While Canadians expect their public safety providers to respond swiftly and effectively to emergent threats and crises, capacity gaps often get in the way.
- Resource constraints are often at the top of the list of challenges faced by police agencies. In recent decades, the changing nature of crime and harm has had a significant impact on police resources. Increasingly sophisticated crime requires increasingly complex, sophisticated, and often multi-jurisdictional investigational efforts. Even more conventional investigations (e.g., impaired drivers, domestic violence, etc.) are much more complex and time-consuming than they were in the past, due in large part to changes in jurisprudence (Malm et al., 2005; Cohen et al., 2018).
- As the Brown Task Force noted, the RCMP never operates at full capacity and chronically struggles to meet its obligations, which contribute to a tired and stressed workforce. This may be accentuated by the substantial breadth and scope of the RCMP mandate, which includes contract policing, federal policing (e.g., drug enforcement, cybercrime, transnational organized crime, border integrity), and national policing services (e.g., the Canadian Police College, Canadian Police Information Centre, Criminal Intelligence Service Canada, Canadian Anti-Fraud Centre).
- In the main, the RCMP tends to rely on the deployment of regular members—fully sworn and trained police officers—to address most policing issues. It has dabbled in community safety officers and community program officers and, in years past, with special constables. While there are still pockets of these resources, they have not taken hold as part of an

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

effective tiered approach for organizing and optimizing the finite resources accorded the organization. This will be discussed later in this report.

- The RCMP has a broad range of readily available internal professional knowledge (e.g., forensic investigations, laboratories, psychology, medicine, law, economics, major crimes, aviation, project management, etc.). However, these tend to operate within their own sub-cultures. While the organization has made certain progress in civilianizing—particularly at its national headquarters—it remains dominated by sworn police officers and has not adapted to learn how these professional and scientific perspectives and approaches could be applied to executive-level problem-solving and decision-making.
- Frequent changes in personnel also affect the continuity of initiatives and ultimately affect community confidence. Many community leaders have expressed concern over the generally short posting durations of RCMP detachment commanders. In a culture in which advancement is important, the organization suffers from a lack of continuity, particularly in detachments, which are the feeder groups to specialized units.
- Operationally, the RCMP is highly capable in conducting its law enforcement mandate. When fully staffed and led by open-minded, effective leaders, the RCMP is favourably viewed as being able to provide the services expected by contract partners and other stakeholders. Unfortunately, its structure, internal policies, and practices impair its ability to ensure detachments are fully staffed and have continuity in leadership. This, in turn, limits the organization's ability to respond and adapt effectively to evolving local needs. This is particularly the case regarding proactive community engagement and crime prevention activities, which often take a back seat to reactive investigative and enforcement efforts.
- The degree to which the RCMP adapts and responds to local community priorities seems to rely largely on the leadership of individual local detachments. As a result, there are inconsistencies in the degree to which communities believe the RCMP responds and adapts to their needs.
- In her 2007 report, Dr. Linda Duxbury concluded, "The RCMP is not, by any accepted measure, a change-ready organization" (Duxbury, 2007: 135). Change readiness is the platform upon which an organization is able to move with agility and confidence through change.

#### Capability and Commitment Gaps

The challenges facing the RCMP in introducing community policing and responding to the recommendations of the Brown Task Force call for transformational change. The types of diverse thinking and professional skills required to implement such things as community policing or the cultural changes envisioned by the Brown Task Force are vastly different from those required to manage existing systems and processes. The deep changes required in both these instances represented significant challenges for the RCMP.

PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

Most RCMP middle and senior managers have spent significant portions of or their entire careers in the organization. They have worked, managed, and been promoted through a maze of systems, culture, and internal politics. In certain respects, this has limited the organization's capacity to change these very same organizational systems, structures, policies, and practices. Even those with advanced degrees can be vulnerable to an internal culture that tends to value conformity over imagination, initiative, and independent thinking.

Organizational culture scholar Edgar Schein has suggested:

[I]t is the unique function of leadership to perceive the functional and dysfunctional elements of the existing culture... The bottom line for leaders is that if they do not become conscious of the cultures in which they are embedded, those cultures will manage them (Schein, 1992: 15).

Challenging or rising above the culture is difficult for those at any level of an organization with a deeply ingrained culture such as the RCMP.

A central question must be asked – why, in the face of so many recommendations for reform in the RCMP over the years, has so little been implemented?

In 1984, Gary Reed, a member of the RCMP, wrote a Masters thesis entitled "Organizational Change in the RCMP: A Longitudinal Study," which examined the rapidly changing operating environment for the RCMP during the period 1968 to 1980 and the corresponding changes taking place at its National Headquarters during that same period. Reed concluded that while the organization did adapt, most of the changes were merely unplanned and reactive. He added that, "The cause of this failure to achieve effective programs varies from changing environmental conditions, a lack of expertise, a lack of commitment by senior management, to decisions based on the opinions and perceptions of senior management who have an institutional disregard for research" (1984: 219).

In mid-November 2007, as the RCMP awaited the forthcoming December 2007 Brown Task Force report, the author Corley and others were concerned that insufficient attention was being given to setting a foundation upon which the RCMP would be able to successfully implement sustainable organizational change to position the organization for the future. In a personal memorandum to the Commissioner, the author drew attention to these concerns:

The June 2007 Report of the Independent Investigator into Matters Relating to RCMP Pension and Insurance Plans ("A Matter of Trust") left little doubt of the author's disappointment in our senior leadership's culture and effectiveness. It is crucial that we show we have learned from this experience.

The present situation provides an unprecedented opportunity to demonstrate that we have learned from the past and can act incisively to make sustainable corrections. The first lesson should be that our system of hierarchy cannot prevent us from doing the right thing. Second, that we require more diversity and different backgrounds in order to (i) enrich senior cadre understanding of our operating environment, and (ii) optimize our ability to execute strategy.

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

The critical issues were laid out in the memorandum in the form of four questions, followed by a set of considerations for senior decision makers. The four questions were:

1. Do we have a critical mass of senior leaders with the competence, diversity of experience and problem-solving skills required of the current situation?
2. What, in the past experience of each of the current executives, is evidence of their energy, capacity and perseverance working both independently and with others, to improve the organization and overcome the substantial inhibitors that lie ahead?
3. Which members of our senior leadership group can articulate a concise and compelling vision for the RCMP, why this is important, and suggest the strategy to move the organization forward?
4. What are the practical, mechanical steps required to improve the executive leadership group and senior decision-making bodies?

As Leuprecht (2017) has noted,

A decade has passed since the Brown Report (2007): on most points little or no progress has been made. The same can be said of the CRCC's 11 recommendations from its 2013 *Public Interest Investigation into Workplace Harassment in the Royal Canadian Mounted Police*. The litany of recommendations over recent decades, compiled in an annex published separately, stands in stark contrast to their glacial and haphazard implementation if they were implemented at all. Low-key fixes have been tried for decades, to little effect (8).

A recent report issued by the Civilian Review and Complaints Commission (CRCC) for the RCMP also noted that:

There has also been no shortage of solutions proposed. In the past decade alone, over 15 reviews have been conducted of the RCMP and its organizational culture, identifying a dizzying array of more than 200 recommendations for reform. Unfortunately, few have been implemented (CCRC, 2017: 2).

Based on our experience and the available evidence, it is fair to say that the RCMP has historically lacked the commitment, transformational change competence, diversity of experience, and problem-solving skills called for by these situations. It does not have a track record of successfully implementing transformative change. This is in part why it is surprising that the Reform Implementation Council was closed after just two years of overseeing the changes recommended by the Brown Task Force.

### Summary

Despite its long history of service, the modern RCMP has been the subject of a number of significant reform initiatives either in response to external pressures or because of internal problems in its culture and operations. While the RCMP has been able to make adjustments, improvements, and incremental changes to its fundamental core service delivery model, it has struggled to make more challenging transformative changes required by community policing or as recommended by the Brown Task Force and others. Most of transformative efforts have failed to

## PART 1: POLICE REFORM, COMMUNITY POLICING, AND THE RCMP

achieve their originally intended outcomes (Conference Board of Canada, 2000; Leuprecht, 2017; Lymburner, 2012).

This review suggests that the following four factors are central to explaining the RCMP's challenge in implementing successful institutional reform:

- The RCMP has historical origins as a paramilitary bureaucratic service (Murphy & McKenna, 2007).
- The RCMP is not a change-ready organization (Duxbury, 2007).
- The inertial organizational culture of the RCMP is resistant to change (Duxbury, 2007).
- The organization lacks transformational leadership know-how and capacities (Duxbury, 2007; Leuprecht, 2017).
- It can also be argued that, over the years, there has been too narrow a focus on refining outdated structures and practices rather than on re-imagining and transforming how the RCMP is structured and organized for the many challenges of the 21<sup>st</sup> century.

**PART 2**

**RURAL POLICING CHALLENGES,  
CHANGE, AND INNOVATION**

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

## A. Rural Policing: Trends and Issues

Approximately eight million Canadians live in rural areas (Statistics Canada, 2021) and are policed by a variety of police services. While there is growing concern about crime and public safety issues in rural areas and about the adequacy of rural police services, there is relatively little research and data on rural crime and rural policing. The following review of national and international rural crime and policing literature identifies some of the key issues facing rural policing in Canada today.

### What's Rural?

To comprehend the special challenges of rural policing, we must recognize the increasingly complex and changing nature of the rural environment. The term “rural” has become an oversimplified, inaccurate, and outdated concept that often obscures its increasingly diverse and complicated reality. Despite its widespread use, there is no universal or commonly accepted definition. For many, the concept of rural signifies a remote area with limited geographic accessibility and low population density. Some researchers define rural as areas or communities that have unique demographic structures, settlement patterns, population densities, long commuting distances, limited supplies of goods and services, and resource-based economies (Hart et al., 2005). In a review of rural crime and policing in England, Marshall and Johnson (2005) have suggested that “rural” can best be defined by distinctive economic, social, and cultural characteristics.

Assumptions about today's rural communities and rural life are often outdated. The generalization that all rural areas are suffering ongoing population decline is not true for many rural communities in Canada. Many rural areas are growing and are made up of a new population mix of long-term residents, urban newcomers, seasonal residents, and rural commuters (Salamon 2003; see also Parkins & Reed, 2012). This “new rural” reality challenges old assumptions that rural communities are simple, intimate, stable, and tightknit places “where everyone knows your name.” These community differences create and affect patterns of crime, social conflict, and policing.

### Rural Crime and Public Safety

Public perceptions about crime and public safety in rural areas are varied. According to rural criminologist Ruddell (2016), public images range from idyllic notions of an orderly, peaceful, and traditional area with little or no crime, to poor, deprived, and crime ridden areas where urban expansion and limited economy make residents increasingly vulnerable. Either image may be accurate for some communities, but not for others.

The statistical evidence suggests that crime rates in rural areas are surprisingly high and sometimes greater than urban crime rates. Crime data analyzed by Perreault (2019) revealed the following comparison of rural and urban crime patterns.

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

- Police services serving a mostly rural population served 16% of the population in the provinces in 2017 but reported 23% of violent crimes, 17% of property crimes, 27% of Criminal Code traffic offences, and 23% of other Criminal Code violations (Perreault, 2019).
- From 2009 to 2017, rural police services reported a total of 1,078 homicides, for an average annual rate of 2.02 homicides per 100,000 population. In urban areas, 4,068 homicides were reported during the same period, for a rate of 1.55 homicides per 100,000 population.
- Other violent crimes overrepresented in rural areas included sexual violations against children and violent firearms offences such as discharging or pointing a firearm ).
- In 2017, the rate of impaired driving was about twice as high in rural areas as in urban areas.

However, some rural areas and communities experience disproportionately high rates of crime that distort general rural crime data, which creates an exaggerated and inaccurate picture of crime rates in rural areas across the board. Perreault (2019) has explained this misleading rural/urban comparison:

- The higher crime rate in rural areas was driven by a small number of police services that reported very high crime rates. In fact, most police services serving a predominantly rural population recorded relatively low rates of crime.
- Higher crime rates in rural areas were mainly observed in the Prairie provinces, where rates in rural areas were 36% to 42% higher than in urban areas in 2017 .
- Higher rural crime rates were mainly observed in the northern areas of the provinces: in the South, crime rates were lower in rural areas in all provinces except Alberta. The higher crime rates in rural areas were mainly due to high rates of physical assault, mischief, and disturbing the peace. These common violations were reported about twice as often by police services serving a mostly rural population.

Canada may be an outlier as a result of its disturbingly high rates of crime in northern communities; most international studies suggest that while rural crime rates are increasing, they remain lower than in urban areas (Marshall & Johnson, 2005).

### Rural Crime Problems

The actual rate and pattern of rural crime in a particular community is determined by a variety of factors such as its history, location, relative isolation, population distribution, and socio-economic conditions. While most rural crime rates are either lower or much the same as urban or suburban crime rates, there are some particular crimes that are especially problematic in rural communities and present special policing challenges.

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

Gender-Based and Domestic Violence

Pruitt (2008) has noted that family violence and sexual assault rates tend to be at least as high or even higher in rural areas. While disproportionate rates from northern or isolated communities may account for some of this difference, some experts have argued that traditional community norms in rural areas are more tolerant of domestic abuse, and there is a powerful social stigma that inhibits reporting “private” family violence to police (Youngson et al., 2021). Close community relationships and the absence of readily accessible police and support services make victims less likely to report abuse in rural areas (Youngson et al., 2021; Perreault, 2019). This suggests that a conventional police response to domestic violence may be inadequate in rural areas.

Antisocial Behaviour

According to the UK Anti-social Behaviour Act 2003, antisocial behaviour “causes, or is likely to cause, harassment, alarm or distress to persons not of the same household as the person” (see also UK Police Reform and Social Responsibility Act 2011). While antisocial behavior has not been defined by Canadian courts or legislation, there is enough anecdotal evidence to suggest that in many rural areas, there are individuals whose antisocial behaviour is considered by many to be threatening or problematic, though not always clearly criminal. Behaviour such as such as harassment, intimidation, petty theft, and vandalism often poses a threat to the safety and security of rural communities. Because small and remote rural communities often lack a consistent police presence, residents may feel forced to accept or tolerate these antisocial individuals. When behaviour escalates and becomes more threatening, the social intimacy and visibility of rural life can make people feel vulnerable to retaliation and the worry that a distant criminal justice system will not be able to protect them or effectively resolve the problem.

A lack of police presence and an ineffective criminal justice response sometimes motivates frustrated community members to take the law into their own hands and resolve the situation by threatening or sanctioning the offender themselves. This backroad justice can take a variety of forms, such as intimidation, threats, assaults, and occasionally homicide. Rural Canada has witnessed a number of high-profile incidents where frustrated community members have taken the law into their own hands, resulting in acts of violence and even homicide. Silver Donald Cameron, in his 2020 book *Blood in the Water*, describes a recent Nova Scotia example where unaddressed community frustration with an individual’s persistent antisocial behaviour led to community-sanctioned homicide. These types of situations present rural police with a unique policing challenge, especially when they are not located in the community.

Rural Property Crime

Property crime constitutes nearly 50% of all recorded crime in rural areas (Perreault, 2019). In 2019, the rural property crime rate was 6% higher in rural areas and is increasing at a faster rate than urban property crime (Perreault, 2019). Changes in the nature of rural communities may help explain this. Property crime has become more prevalent as the value of rural property has escalated. Increasingly expensive farming, fishing, forestry, and recreational vehicles and equipment and the growth of expensive recreational homes and property, combined with limited guardianship, create opportunities and incentives for property theft. This has become an

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

increasingly serious problem for rural communities and rural police, making community-based crime prevention programs an increasingly important part of rural policing.

## Rural Police and Policing: Issues and Trends

### Scope and Scale

While population density and distribution vary dramatically across different rural areas, most rural areas have significantly fewer people per square mile than municipal or urban areas. This presents some particular logistical and efficiency challenges that are characteristic of rural policing everywhere. Studies of rural policing in Canada, England, and Australia have suggested that lower levels of police coverage, lower police visibility and presence, and slow response times to incidents or calls for service result from the particularities of rural geography (Marshall & Johnson, 2005). These service challenges are affected by limited police resources and sometimes the location of police services, specifically when they are centralized and not distributed across the area to be policed. The evidence shows that the greater the physical distance between the police and the people they serve, the less satisfied people are with their police service.

### Policing Costs and Resources

Rural policing is expensive. Reconciling the provision of a comparable level of police service to rural residents with the reality of police resources is therefore a perennial problem. Historically, the costs of police service in rural areas have required provincial and federal government subsidies. Despite these subsidies, rural municipalities have had to significantly increase their funding as the cost of policing rapidly escalates. Public pressure to increase police numbers to enhance the level of police service will require even higher levels of government expenditures in the future. As a result, police have made efforts to limit the cost of rural policing by rationalizing police services through amalgamation, regionalization, and centralization and a selective focus on core policing functions (Murphy, 1991; Murphy, 2002). These efforts have led to a perceived decline in police service and are the source of great deal of dissatisfaction with the current policing model. Moreover, communities throughout rural Canada and provinces such as Alberta and British Columbia have been looking at alternative policing arrangements in order to address perceived rising service costs and service limitations. The escalating cost of rural policing will continue to be a challenge for rural communities and the police, especially if the existing model of delivering all policing services using only uniformed police officers is maintained.

### Public Perceptions

While public evaluations of policing in both urban and rural communities are generally positive, that endorsement tends to be lower in rural communities. For example, a recent survey of urban and rural residents in Saskatchewan found the following:

The results presented revealed there is a difference in the way that rural and urban people perceived police effectiveness. Rural residents were less likely than their counterparts to indicate that police did a good job of enforcing the laws, promptly responding to calls, providing information on preventing crime, ensuring their safety, or cooperating with the public to address their concerns. Findings suggest rural residents perceive their local police as being procedurally

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

just but not particularly effective in their work. The survey also reveals that rural residents rated overall police performance poorer than their urban counterparts (Ruddell & O'Connor, 2021: 10).

Other national and international studies (see, e.g., Jackson et al., 2021; Ruddell & O'Connor, 2021) have found similar results, indicating that rural residents are more likely to complain that police response times are slow, that rural crime victims are less satisfied with police response, that a significant portion of the population feels unsafe in their communities, and that rural police are doing a poor job of communicating with them.

### Recruiting and Retaining Rural Police Officers

While small-town and rural police have many of the same problems and challenges as their urban counterparts, they do have some unique staffing challenges. Research in the United States (Weisner et al., 2020) and anecdotal reports in Canada suggest that small rural police services have trouble attracting and retaining qualified police personnel. As a result, rural police services tend to have lower levels of education and are less diverse than their urban counterparts.

Small-town and rural police services also experience higher rates of personnel turnover than urban police forces (Wareham, Smith, & Lambert, 2015). Rural policing is generally seen as a less attractive career choice given the limited nature of rural police work and the limited career and promotion opportunities in a small police service. In addition, the challenges of living in a small community as a police officer with a family is seen by many as problematic. Finally, studies indicate that rural police officers experience higher levels of stress because of social isolation, the lack a strong peer police culture, and the prospects of policing alone.

As a result, while some police officers may prefer the scale and intimacy of rural policing, recruiting and retaining qualified police officers is generally more challenging for small stand-alone police services. This is not a problem when police are part of a broader regional or provincial police service, such as the RCMP, but this advantage is undermined by frequent personnel turnover in rural detachments.

### The Centralization of Rural Police Services

Although the rural Canadian population has generally grown over recent years, there has been a dramatic decline in the availability of local police services in rural and small-town Canada. Aggregated data reveals a 26 percent decrease in local police services from 1998 to 2005. In fact, most rural and small towns are now serviced by police agencies located within a 30-minute drive. This makes it less likely that crime in rural places, and especially domestic crimes, will be reported or policed. This is exacerbated by geographic and social isolation, such as from social services or victim support... (Donnermeyer, et al., 2016: np).

The resource challenges and the cost of policing large underpopulated areas have led to increasing political and economic pressures to rationalize rural and small-town policing services by centralizing or amalgamating them to make them more cost-effective and efficient. This centralizing trend has taken place across Canada and in other countries such as the United States, Australia, and the United Kingdom. The following, for example, describes the centralization of rural policing in Cornwall, England:

COMMUNITY-ENGAGED RURAL POLICING:  
THE CASE FOR REFORM AND INNOVATION IN RURAL RCMP POLICING

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

Police officers no longer live in constabulary-owned police housing, local substations have closed, officers are generally deployed from a central station and are in regular contact with their colleagues in person or by mobile phone, and phone calls to the police are routinely routed to a central, force-wide call centre that may be many miles from the scene of crime (Mawby, 2004: 433).

Connecting local policing to a more central or larger (i.e., provincial or RCMP) police organization means that local police can, in theory, draw on the additional resources, technologies, and specialized skills of the larger police organization. However, while centralization or amalgamation give greater access to specialized personnel and technology, these advantages come at a cost to the nature and quality of local police services (Murphy, 1991).

Public dissatisfaction and political concern about the quality and effectiveness of RCMP rural policing in Aboriginal communities and in Western provinces such as Alberta, Saskatchewan, and British Columbia have some of these jurisdictions reconsidering their policing options. Common complaints about lack of police presence, slow response times, limited community contact, and lack of local accountability have generated serious interest in the possibility of creating alternative policing arrangements, such as provincial policing or replacing RCMP detachments with municipal police (PricewaterhouseCoopers, 2021). While these concerns are often a matter of cost and limited police resources, they are also generated by the lack of local policing accountability and the style of policing that centralized police services deliver.

### The Decline of Rural Community Policing

Over the last 50 years, small-town and rural policing has seen a gradual transition from local municipal or small-town police forces to regional, provincial, or contract police services. Many small municipal police services, which were once institutions of the local community, have been gradually replaced in Canada by RCMP contract police or regional or provincial police services (Murphy, 1991). For example, in Nova Scotia between 1988 and 2012, 25 stand-alone municipal police services were reduced to eleven agencies.

Small-town municipal police officers have historically been local in origin, often poorly paid, minimally trained, and subject to local political and public pressure. By the 1980s and 1990s, a laissez-faire community-based style of local policing was increasingly regarded as being out of date and no longer suitable for many small towns. Many local police services were replaced by RCMP detachments whose officers, who were not local, were better trained, and were independent of local politics and culture. In response, remaining small-town municipal police services began to upgrade and professionalize their organization, management, and policing style, moving away from away from the informal and unprofessional—but community-based—style of the past. By the 1990s, most municipal police services in Nova Scotia had adopted a professional policing model that emphasized political independence, better training, and stricter law enforcement (Murphy, 1986).

The shift to a professional law enforcement model meant that local governments and citizens ceased to be the primary source of authority and influence over local policing. Police had become more like their urban counterparts, focused on responding to calls for service, enforcing law, and

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

spending little time on social or preventative policing functions, such as communicating with residents, investigating minor complaints, seeking out information, and engaging with institutions and members of the community. This general movement away from old-fashioned community policing to a more professional policing model has been widespread, and there has been growing dissatisfaction with this impersonal and disconnected style of policing.<sup>1</sup>

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

## B. RCMP Rural and Small-Town Policing: Challenges and Limitations

This section explores some of the key strengths and weaknesses of RCMP rural policing, together with some possible opportunities for improvement.

### The RCMP and Contract Policing

While its core mandate lies in federal policing, the RCMP has a long history of providing mainstream policing services under contracts with provinces and municipalities. Today, over 60% of RCMP resources, and over 70% of RCMP officers are assigned to contract policing services in Canada's three territories, all provinces other than Quebec and Ontario, and over 150 municipalities (Public Safety Canada, 2019). These policing contracts offer a lower cost alternative for most jurisdictions, since the federal government covers 30% of the costs of policing for rural communities and smaller municipalities and 10% of the costs for municipalities under contract with populations over 15,000 (Public Safety Canada, 2019). This gives the federal government a significant presence in smaller communities across Canada and, by virtue of the contracts, the ability to draw on these local RCMP resources in the case of major incidents or national emergencies.

The RCMP resourcing models for contract policing often result in lower costs per capita for policing than found in comparably sized municipal police services (McClern et al., 2018; Roach, 2022: 144). While some view this as a benefit for local taxpayers, others complain that it contributes to communities being under-policed (McClern et al, 2018).

### The Challenges of RCMP Contract Policing

The RCMP is a tradition-bound paramilitary-based organization that has been notoriously slow to change. Many of the issues that impede the RCMP from achieving excellence in its delivery of contracted rural and small-town policing are tied to the organization's paramilitary origins and its gradual evolution as a large centrally managed national police service over nearly 150 years.

RCMP detachment policing is in many ways the antithesis of the traditional small-town municipal police model. It's an historical remnant of the colonial policing model in which the primary purpose of law enforcement was to ensure that national standards of legal order prevailed where necessary over local custom and circumstance (Brown & Brown, 1978). Philosophically, detachment police were and still are intended to stand apart from or be "detached" from being swayed by local community politics or public opinion, in order to facilitate the impartial exercise of law and order, i.e., "without fear or favour." As detached units of a large, centralized police bureaucracy, local RCMP detachments are fiscally and politically independent of the local community and respond primarily to the centrally derived policies, enforcement priorities, and production pressures of the organization and not necessarily the local community (Murphy, 1991: 335).

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

Its closed institutional culture has historically resisted external political and public pressures for significant change, and the organization maintains a set of internal structures, systems, policies, and processes that serve to protect the status quo and the image of the organization (Task Force on Governance and Cultural Change, 2007a; Task Force on Governance and Cultural Change, 2007b; Leuprecht, 2017; Bastarache, 2020; Maher, 2020; Murphy & McKenna, 2007).

The following are some of the documented organizational, institutional, and cultural characteristics of the RCMP that have an impact on detachment policing in small towns and rural communities.

#### The Centralized Nature of the RCMP

The centralized structure of the RCMP as a national police service both facilitates and impedes the provision of effective policing services. The organization's established national standards for local policing generally ensure a consistent and stable level of police service across the country. The flipside, however, is a largely centrally directed and centrally organized police service that has difficulty adapting and responding quickly to non-standard local policing needs and priorities (Task Force on Governance and Cultural Change, 2007b). Communities are most often best served when their local needs and priorities are reflected in policies and practices that are informed by local knowledge and context (Scott, 1998: 316–19).

The range of options available to the RCMP to adapt its standard services to meet local needs is limited by federal legislation, RCMP national standards, structures, policies, and its traditional institutional culture. Even when customization occurs, it usually takes considerable time for the RCMP bureaucracy to respond. The following outlines some reasons for the disconnect between local policing needs and the RCMP responses.

- Local governments frequently approve additional police resources, but the RCMP has for many years been unable to provide such resources in a timely manner. The federal government has acknowledged that due to high demand for RCMP officers across Canada, recruitment and staffing issues are likely to continue to be a problem for small communities for some time (Bronskill, 2020).
- If a detachment commander is promoted and ordered transferred, there is no formal mechanism by which a local community can retain the services of the promoted member in an over-ranking scenario, even if the member was interested and the community was prepared to pay additional salary costs. The RCMP's centralized human resource and promotion system simply does not allow for such local flexibility. Thus, communities often have little say over personnel issues, as these are decided by the RCMP's internal policies and priorities.
- Internal RCMP policies and federal legislation (e.g., the Privacy Act) limit information-sharing, which in turn limits more fluid local partnerships and collaborations.

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

Recruit Training

Leuprecht (2020), Bastarache (2020), Maher (2020) and others have observed that many aspects of RCMP training and induction at the RCMP academy in Regina are no longer commensurate with the requirements of a modern civilian-oriented and community-based policing service. Rather, too many aspects of the training at Depot reinforce an outdated traditional paramilitary culture. This reinforces the internal organizational culture of the RCMP and exacerbates its separation from the community.

Staffing and Promotion Systems

For many young RCMP members, policing in rural and small towns is the first step in careers that will bring them to a variety of other policing functions and locations. But the demand across Canada for contract policing members exceeds the RCMP's capacity to recruit and train them (Public Safety Canada, 2019). Staffing smaller, sometimes isolated rural detachments also has long been a challenge for the RCMP for varied reasons, including:

- potential lack of employment opportunities for spouses;
- schooling issues;
- access to health and professional services;
- limited range of extracurricular activities and amenities;
- housing market concerns (SECU, 2018).

As a consequence, the organization must rely on deploying new, inexperienced recruits to small communities in rural detachments (SECU, 2018; SECU, 2019). While some members adapt and do very well in rural settings, many prefer to police in more urban settings. Consequently, many have limited involvement in the local community and spend much of their off-time away. As one municipal counsellor recently put it,

I do not want someone who drives in here from three hours away, works a couple days, fills a position, then throws his gear in the trunk, slams it shut and goes home, who doesn't know anybody in the community, good guys or bad guys, or if there is a hospital in Truro (Maher, 2020).

The RCMP promotion and staffing system also acts to undermine local policing in unintended ways. Promotions and positions with specialized functions are highly valued in RCMP culture (RCMP, 1999), and sometimes the promotion and staffing processes act against the interests of local communities. As members gain experience and opportunities for promotion, they often end up moving into different lines of police work, and particularly in rural policing, this may involve transferring to a new community. Small rural communities are thus confronted with an ever-changing cast of RCMP members, many of whom spend only a limited time in the community.

A recent trend in some RCMP divisions is to combine smaller detachments into more centralized hub service delivery centres. In some areas, this has been driven by the challenges of getting members to live and work in rural locales and an effort to find greater efficiencies in the cost of service delivery. Communities, however, tend to be less inclined toward such a centralized structure

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

since it further distances police officers from the communities they serve (Ball, 2018; Briere, 2020; CBC, 2020; Funk, 2019). We would argue it also tends to emphasize a service delivery model that focuses on responding to calls for service while limiting community involvement and contact.

The RCMP's organizational culture and doctrine has long held that with few exceptions, regular members can and should be moved through the ranks of the organization, learning on the job, without having to acquire the specialized knowledge or experience required in different work areas (Leuprecht, 2017; Maher, 2020). While that tenet may have been suitable in the past, contemporary policing entails increasingly complex and changing requirements, and adherence to this one-size-fits-all and learn-on-the-job model is both anachronistic and inefficient. Like federal and national security policing, contract policing in rural communities has its own distinctive experience, knowledge, and skills requirements that are not necessarily transferable.

### RCMP Institutional Culture

As described earlier in this report, the hierarchical and tradition-bound culture of the RCMP adversely impacts its abilities to adapt and change (Perrott & Kelloway, 2011). Research (Taylor et al., 2022; Murphy & McKenna, 2007; Stamper, 2006; Lunney, 1998) has repeatedly shown that rigid paramilitary cultures of this nature tend to:

- impair the quality of problem-solving and decision-making;
- promote risk aversion;
- discourage innovation and creativity;
- promote a low tolerance for ambiguity;
- encourage conformity and a common worldview;
- discourage diverse and critical thinking;
- value action over reflection and analysis; and
- censure internal critics.

RCMP culture places undue importance on rank authority and command and control systems and structures. While these are important during some operational circumstances, they can be counter-productive in terms of collaborative and collective problem-solving and run counter to many of the new requirements of a modern policing (Murphy & McKenna, 2007). Like police elsewhere, the organizational culture at the front line also places greater value on the enforcement and investigative roles than on other community-oriented and preventative activities, which are not generally considered as important or exciting. As Angela Workman-Stark, a former RCMP officer, has explained, "the traditional crime fighter style is still the predominant style associated with patrol officers" (Workman-Stark, 2017: 26), adding that culture downplays the "social service aspects of the job that are perceived as feminine work" (22). The challenge for the RCMP in rural policing is creating and sustaining a police culture that values and appreciates crime prevention and community policing work as much as it does enforcement and investigative police functions.

### A Monolithic Organization

Multiple reports and commissions have questioned whether the RCMP has become too big to function effectively and whether it tries to be too many things to too many different stakeholders

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

(Leuprecht, 2017; Maher, 2020; Gerster, 2021). The short answer, in our view, is yes, but it doesn't necessarily have to be so. It has long been argued that, like other large and complex organizations operating multiple business lines, the RCMP should reconsider its current organizational structure (Leuprecht, 2017). By reorganizing around its primary functional areas, it would be able to develop more appropriate and specialized expertise and leadership specific to those areas and ultimately improve upon the services delivered in each business line. In part, this means that contract policing and federal policing would be organized separately as different strategic business units, each with their respective policies, human resource requirements, and procedures, all of which would be designed to support that specific business line. Under this scenario contract policing would be a separate and complete policing service.

### Organizing for Improved Outcomes at the Community Level

As the costs of policing continue to stretch the financial limits of local and provincial governments, the RCMP needs to demonstrate more flexibility and creativity in how it organizes local policing services. This is necessary in order to collaborate with communities and other agencies to promote community safety and well-being. For instance, expanding its use of alternatives (e.g., community constables, etc.) instead of fully sworn officers could enhance community engagement, while reducing demands on its finite and more costly fully sworn police resources.

The RCMP's Community Program Officer (CPO) program represents one of these creative solutions. CPOs are civilian employees of the RCMP who work with communities to reduce and prevent crime (RCMP, 2018b; RCMP, 2020). Such roles are suitable for individuals with a deep interest in building community capacity to reduce crime and who bring appropriate educational credentials (e.g., in criminology, sociology, social work or criminal justice studies) and some experience in community development. The benefits of the CPO program include:

- Individuals are hired to do this specific function in a given community and can be dedicated to the role over the long term, thus providing continuity and developing the broad base of relationships required of such roles.
- The cost of a CPO is a fraction of the cost of a sworn police officer, with no requirements for ongoing mandatory training and re-qualifications (e.g., firearms).

A seasoned CPO can serve as a central node in the local community safety and well-being/crime prevention system, galvanizing the efforts of multiple traditional and non-traditional partners toward shared goals and objectives. An ideal CPO would be highly knowledgeable in the field of crime prevention, community policing, and community safety and would know what resources are available, including available grants from provincial and federal governments and private and philanthropic sectors. There are currently very few CPOs across the RCMP.

The RCMP Community Constable program, which ran from 2011 to 2017, offered another alternative. Community Constables were armed, uniformed peace officers. With linguistic, cultural, and geographic knowledge of the communities in which they served, they were intended to focus on crime prevention through community engagement but were to be prepared to provide

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

operational support as and when required. An internal evaluation of the program revealed that program direction and governance was lacking, and the Community Constables appeared to be spending more time conducting law enforcement than crime prevention (RCMP, 2018a). Notwithstanding, community stakeholders indicated satisfaction with the program, suggesting that it had a positive impact on relations between the RCMP and the community and made the RCMP more accessible (RCMP, 2018a).

If the RCMP were to look at these and other flexible and innovative models of service delivery, they may not require additional funding to improve services. The RCMP's recent announcement of hiring 35 civilian criminal investigators to support financial and cybercrime investigations (Northcott, 2021) may suggest a new willingness to move in this direction.

There are, of course, other alternatives that provincial governments can also consider, independent of the RCMP. The Alberta Peace Officer program<sup>2</sup> and the Community Safety Officer programs in Saskatchewan<sup>3</sup> and Manitoba<sup>4</sup> are excellent examples of second-tier peace officers who can assume responsibility for a range of low-risk-to-harm activities traditionally performed by the police, thereby reducing demand on finite police resources (CSKA, 2020; Purdy 2017). The bottom line is that it increasingly unfeasible for costly, fully sworn and trained police officers to be responsible for all aspects of local policing.

### Administering Policing Contracts

The Provincial Policing Service Agreements (PPSA) and Municipal Policing Service Agreements (MPSA) offer opportunities for the provincial governments and local communities to have greater input in the selection of detachment commanders. The PPSA provides that:

- a) At the request of the Provincial Minister, prior to the appointment of a detachment commander in the Division, the Commanding Officer will consult with the Provincial Minister; and
- b) The Provincial Minister may also request that the Commanding Officer consult with the community, in which case such consultation is to be undertaken in accordance with the RCMP's policies on community participation.

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

MPSAs also provide that before appointing a detachment commander, the Division commanding officer will consult with the municipality CEO and that the CEO may request that the community be consulted.

However, the reality is that many local governments and communities do not exercise these opportunities to provide input where policing services are provided or into the selection of their RCMP detachment commander, which is in stark contrast to municipalities that actively select their police chief. The lack of local input greatly limits the ability of communities to ensure that local detachment model of policing and its policing priorities are in accordance with community needs and expectations.

### Towards Community-Engaged RCMP Rural Police Service

Improving community safety and well-being outcomes requires collaboration between the police and other social and public health agencies and community-based organizations. To be effective in providing a more community-engaged police service, the RCMP must, in our view, be more:

- Responsive and adaptable
- Innovative and progressive
- Results-oriented
- Collaborative

#### Responsive and Adaptable

The RCMP must align its priorities, strategies, and activities with the interests and expectations of local communities. In emphasizing its law enforcement and investigative functions, the RCMP places far less weight on proactive community engagement and crime prevention activities. Community policing starts with a good understanding of the history, needs, interests, and expectations of the local communities being served. Community members, including local business owners and other human service providers, have important perspectives that should be taken into account as the police and police advisory boards develop and implement policing plans. However, the degree to which such community consultations occur is often a function of the receptivity of the local detachment commander. Where detachment commanders are actively involved in the community and open to such input, the community is able to express their policing needs and priorities and influence local policing service. Alternatively, if a detachment commander has a more traditional view of policing, they will not likely pursue or participate in engaging the community.

#### Police Advisory Boards

As in many provinces served by the RCMP, Nova Scotia Police Act that provides for the creation of police advisory boards (PAB) for communities policed by the RCMP. But Nova Scotia legislation goes beyond most, in that it *requires* that municipalities served by the RCMP establish a PAB. The boards serve as conduits for community input into local policing and community safety priorities and strategies. They are mandated to “provide advice to the council in relation to the enforcement of law, the maintenance of law and order, and the prevention of crime” (NS Police Act, s. 57). Furthermore, pursuant to s. 57(3), these boards are also directed to:

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

- a) Determine, in consultation with the chief officer or the chief officer's designate, priorities, objectives, and goals respecting police services in the community;
- b) Ensure the chief officer establishes programs and strategies to implement the priorities, objectives, and goals respecting police services;
- c) Ensure that community needs and values are reflected in policing priorities, objectives, goals, programs, and strategies;
- d) Ensure that police services are delivered in a manner consistent with community values, needs, and expectations.

The deficiencies of municipal police governance in Canada have long been reported on (CBC Ideas, 2003; Sheard, 2016; Roach, 2022; Kelcey, 2022) and range from a lack of resources to provide effective governance in an increasingly complex environments and a lack of training for board members to legislative frameworks that fall short of providing sufficient authority to boards to enable them to properly carry out their functions. Some of these issues may extend to PABs. For example, in May 2020 the Colchester County Municipal Council discussed the fact that the local PAB had not met in over a year, and there had been no progress or updates provided by the RCMP during that same period (Colchester County, 2020).

When PABs are inactive and ineffective, community stakeholders are deprived of an opportunity to express their policing needs and priorities or obtain an accounting of the activities and operations of their police service. Any serious attempt to improve communication and cooperation between the RCMP and local communities must begin with an active and informed relationship between local PABs and the RCMP. PABs provide a mechanism for community consultation and accountability that could become the foundation for a more community-engaged local policing service.

#### Results-Oriented

It is often said that "what gets measured gets done." Like many police agencies, the RCMP still tends to measure traditional crime-related statistics, such as reported crime clearance rates, as measures of their success in delivering police services (Mazowita & Rotenberg, 2019). This reflects an organizational culture that emphasizes its law enforcement and investigative functions over less measurable activities that are focused on crime prevention and broader community safety and well-being goals (e.g., perceptions of safety and experiences with the police). It is important that the measures of community safety and security also be seen as results and communicated by local communities through the PABs.

#### Collaborative

In its 2014 report "Policing Canada in the 21<sup>st</sup> Century: New Policing for New Challenges," the Council of Canadian Academies expert panel observed that police organizations need to fully adapt to the emerging "safety and security web" that characterizes how community safety and security is actually being organized and delivered. In this model, a multitude of public, private, non-profit, and community groups interact with one another and the police to improve outcomes. As

## PART 2: RURAL POLICING CHALLENGES, CHANGE, AND INNOVATION

the panel further noted, “Although the police have begun to adapt to the evolving context, more change is needed if they are to overcome their many organizational and operational challenges, including the rising costs of policing” (Council of Canadian Academies, 2014: xi). The panel also noted that partnering in ways where the police are not necessarily leading may require specialist skills in developing and managing cross-sectoral partnerships.

Local policing partnerships and collaborations are not determined by explicit RCMP policy but by the particular character and policing style of the detachment commander. We have spoken with local officials in different communities who have expressed their appreciation for the progressive and collaborative approaches of a particular detachment commander, only to have that individual transferred and be replaced by a more traditional manager who retrenched to having limited effective contact and communication with the community. For community collaboration to work, RCMP policy and its personnel promotion selection processes should be more explicit in selecting for compatible detachment commanders who are committed to being open and willing to work with the communities they serve.

### Summary

The RCMP’s desire to achieve excellence in local police service delivery is often hampered by its historical broad and complex policing mandate and its centralized paramilitary organization and culture. Operationally, the RCMP is considered competent and capable in conducting its law enforcement and investigative functions, and individual members consistently work hard seeking to meet or exceed community expectations. When fully staffed and led by open-minded, effective leaders, the RCMP tends to be favourably viewed by its contract partners and communities.

Unfortunately, the RCMP’s centrally driven organizational structure and traditional police culture, together with a myriad of bureaucratic internal policies and practices, too often impair its ability to ensure that detachments are fully staffed, have community-compatible leadership, and have the latitude to respond and adapt effectively to evolving local policing needs.

## **PART 3**

# **COMMUNITY-ENGAGED RURAL POLICING PRINCIPLES, PRACTICE, AND MODELS**

## PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE, AND MODELS

## A. Community-Engaged Rural Policing

Our review of the history of police reform and rural policing indicates there has been a gradual transformation of policing in general and rural policing in particular, from being community-based, with broad policing responsibilities, to a more limited but professionalized policing model. To limit cost and increase response capacity, many small independent police services have been amalgamated or have been replaced by detachments of provincial or RCMP contract police. While providing stable and standard local law enforcement services, they have adopted a policing model that is primarily reactive and too often minimally engaged with the local community.

Because of the limited resources and dispersed nature of rural populations over large geographic areas, police time and effort tend to be consumed by responding to calls for service. This leaves few police resources for preventative policing and various community policing activities. As rural police no longer necessarily live or are stationed in the community, police contact with the rural residents tends to be infrequent, formal, and limited. Without regular personal contact, rural police often lack the critical “local knowledge” required to anticipate and resolve potential and existing community safety and security problems. In turn, local citizens limit their communication with a distant “drive-through” police service to making formal complaints or reports. This lack of regular personal contact and communication between police and their public results in a policing model sometimes described as “strangers policing strangers”.

While the conventional policing model is effective in responding to immediate demands or complaints, its failure to have adequate community information makes it less effective in preventing community crime and safety problems. We believe a community-engaged model of rural policing would provide both a more informed conventional police response and a solid foundation for preventing and enhancing community safety and security.

This next section outlines what an ideal community-engaged rural policing (CERP) model would look like. We begin by identifying some its key distinctive policing principles, its organization and management structure, and a variety of best practice strategies and programs that have been used to operationalize community-engaged policing in Canada and elsewhere.

### Community-Engaged Rural Policing (CERP): Principles and Practice

Community-engaged rural policing:

- Is not a new or alternative model of conventional policing but one that reinforces the role of the police as a community institution that is proactively involved with the community/public in the collaborative production of community safety and security;
- Is operationally independent but directly accountable to the local community and local government by actively communicating and engaging with the community to establish policing priorities, policies, and programs;

### PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE AND MODELS

- Is committed to a mandate that goes beyond crime control and law enforcement to encompass a broad range of social and preventative policing activities that contribute to general community safety and security;
- Allocates adequate police resources to do both *reactive* and *preventative* community policing;
- recognizes that effective local policing requires community-generated information and intelligence;
- proactively seeks community engagement through various modes of formal and informal public contact, communication, and partnerships;
- is based on an understanding of the particular area or community being policed and the development of *community-specific* policing strategies and programs.

### CERP Organizational and Managerial Principles

The following suggests how a CERP police service should be organized, structured, and managed to align with community-engaged policing principles and practices.

#### Community Engagement

Police management and the organization of police services should emphasize various modes and strategies of police contact and involvement with the community, beyond answering calls for service and investigating serious crime. There are multiple formal and informal ways a police service can be organized to engage local citizens and the community at large, but they all require management commitment and appropriate resources.

#### Community Accountability

As a community-oriented police service, management needs to be in regular communication with the public and various representative institutions of the community. It can do this through different communication and public accountability forums such as community police advisory boards (PABs), occasional community surveys, various forms of social media and electronic communications (e.g., Facebook, Twitter), periodic public meetings, and yearly reports to the community/government. Policing service data and objectives may be used as a basis for community feedback. As an example, see the report from the Suffolk Constabulary in the United Kingdom, “Rural Policing Strategy, 2017–2020.”

An example of community accountability: a policing strategy document from the United Kingdom

#### Community Partnerships

A CERP service should establish formal and informal relationships with local citizens and community agencies in order to initiate and participate in collaborative problem-solving. This could

### PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE AND MODELS

include the use of community volunteers (i.e., neighbourhood watch and citizen patrols) in conventional crime prevention programs and/or collaboration with community agencies as practiced in the Hub community safety and security model (see further below).

#### Community Safety and Prevention

Police managers must be prepared to allocate adequate policing resources and develop strategies designed to prevent crime and enhance community safety. This means orienting police services to identify emerging community safety issues and risks before they become serious policing problems. This requires capacity to gather local community information, a commitment to both new and traditional crime prevention strategies, and other prevention approaches such as problem-oriented policing (see below) and multiagency problem-solving.

#### Community Police Presence and Access

When a police service is not physically located in the community or in the area, there should be strategies for establishing a visible and accessible regular police presence in that community. This can be done by maintaining a storefront police office, satellite offices, or police substation with scheduled police representation and/or deploying a community-embedded police service officer who represents the police service in that community.

#### Local Managerial Autonomy

Where local policing services are provided by a detachment or a satellite of a larger regional or provincial police service, the manager of that service needs to have adequate managerial authority and autonomy to develop community-specific policing policies and priorities. This means giving priority to local policing needs and may require a management approach or style that differs from the prescribed standard model.

#### Information-Based Management

A modern CERP model should be intelligence- or evidence-based. This requires an active emphasis on the collection and analysis of community information. A community-engaged police service should be organized to receive, collect, and analyze community information and use it to inform both conventional response and preventative policing strategies.

### **Community-Engaged Policing Strategies**

There are a number of best practices and innovative strategies that have operationalized the principles of community-engaged policing. These evidence-based strategies have been utilized with success in different policing locations and could be implemented to address some of the challenges facing rural policing.

#### Managing Police Response

Because of limited police resources and the variety and volume of calls for police service, many police organizations have developed or adopted programs to manage, rationalize, and prioritize

### PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE AND MODELS

the public demand for a uniformed police response. Unless calls for service are efficiently managed, police time and resources are almost entirely consumed by trying to keep up with escalating demand for in-person police response. To deal with this problem, police have developed differential response programs that establish call priorities and, depending on the nature of the call, allocate different types of police response. By redirecting and delaying some calls, it frees up police resources and expertise to other important proactive policing tasks. Managing calls for service is especially critical in rural policing, given the time it takes to respond calls in geographically dispersed policing areas. An effective rural police service must find ways to manage the demand for police service in a way that satisfies the public but also rationalizes its limited resources. Many urban and rural police services, including the RCMP, use some version of calls for service management (Sumrall et al., 1981).

#### Community Patrol Strategies

Most uniformed rural police services are delivered to the community through mobile police patrol. The standard model of random police patrols in rural areas accomplishes very little and offers little reassurance or access to the people and communities being policed (Kelling et al., 1977). A variety of more effective patrol strategies have been successfully implemented in police services:

- Directed Patrol is a patrol model that directs patrol officers towards specific policing objectives, usually defined by some sort of crime analysis or problem-solving.
- Community Patrol emphasizes police visibility and personal contact by finding ways for officers to get out of their cars and make more direct contact with members of the public. This can be done in a variety of ways such as regular storefront visits, scheduled coffee stops, and (where feasible) occasional foot patrol. The point is to maximize personal contact with the public when officers are not directly answering calls for service.

#### Problem-Oriented Policing

Most policing is complaint- or call-driven. Police are expected to respond and try to resolve a call quickly in order to be available for the next call. Most calls are viewed as discrete events, and further involvement by the responding officer is limited. However, some calls or incidents—especially if they are unresolved or repeat calls—suggest there is a bigger problem that requires further police involvement and/or a different response. A common example of this is repeat domestic violence calls. Instead of responding to each call as a separate incident, often by different officers, these related calls can be regarded as a problem to be solved by further investigation. This problem-solving approach has been formalized into something called “problem-oriented policing” (POP).

POP is a long established but not widely used strategy that encourages officers to think critically and creatively about policing problems that have not been resolved by standard police response. It involves identifying issues that deserve further exploration and analysis and encourages creative police responses to solving those issues. POP programs have been successfully employed in police services throughout North America and Great Britain and can be easily adapted for use in small

## PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE AND MODELS

rural police services or to address reoccurring problems without additional cost (Goldstein, 1979; Goldstein, 2003).

### Community Safety and Multiagency Response: The Hub Model

Concerned about the limited impact of reactive policing on some persistent community policing problems, police leaders have been exploring new ways to more effectively identify and address developing threats and risks to community safety. While most police prevention programs typically target a specific crime problem, a new multiagency preventative strategy called the “Hub model” focuses on at-risk individuals and situations of risk to a community:

The Hub model was developed in Scotland and adapted to the Canadian context in Saskatchewan. It is a multisectoral, collaborative, risk-driven approach to intervention that involves the rapid mobilization of appropriate resources to intervene in and support the immediate needs of individuals experiencing acutely elevated risk of deleterious safety or well-being behaviors. Hub is not a policing model, per se. Rather, it is one part of a community safety model designed to improve a much broader set of social outcomes, including reducing crime, violence, and victimization. As such, this is a model in which policing has a vital role to play, alongside others, and from which policing has much to gain (McFee & Taylor, 2014).

This multiagency approach uses the combined resources and expertise of police and community agencies to address community safety problems. Where the Hub approach has been implemented, there has been a reported decline in selected crime and community problems and greatly enhanced collaboration and communication between police and community agencies (Nilson, 2014). The Hub approach seems especially adaptable for small communities where at-risk individuals and situations are better known and where early multiagency intervention is likely to be more effective. The Hub model is an example of evidence-based community safety and policing. It uses risk data and measurable outcomes to validate its value and impact. While requiring a police commitment and limited training, it has proved to be an effective tool for preventing and addressing community problems that otherwise would not be addressed by conventional police response.

#### Community Police Service Officers

Most police services have limited non-enforcement contact and involvement with the public they police. The resulting gap has encouraged police to experiment with different ways of addressing this disconnect. Typically, a force will assign an individual police officer to a specific neighbourhood or community, and that officer will be solely responsible for community engagement and crime prevention. While some officers are reasonably effective in this role, many lack the background skills and temperament for sustained community engagement. Police often view such deployment as a public relations exercise and an inefficient use of scarce police resources. Moreover, most small police services don't have enough police officers to assign permanently to a specific community or area (Weisburd, Farrington, & Gill, 2017).

When a police service is located a distance from the community, there is a particular need for some sort of consistent, visible, and accessible police presence. Recognizing the problem, some police

### PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE AND MODELS

services have created a new kind of community police position. “Community officers,” either civilian or police members, are stationed in the community permanently to provide services such as information-gathering and communication, follow-up investigation of minor complaints, communicating with victims and complainants, enforcing community bylaws, and maintaining various community policing and crime prevention programs. While the community benefits from a community officer’s presence, the police service also gains a reliable and informed source of local knowledge that can assist police in their regular duties. When properly planned, implemented, and managed, a dedicated community officer can provide an effective, less expensive community policing alternative.

Perhaps the most extensive use of community officers has been in the United Kingdom, where over 12,000 Police Community Service Officers (PCSO) positions have been created since 2008 (O’Neil, 2019). PCSOs have limited law enforcement powers, but a broad range of community policing responsibilities. They are assigned exclusively to develop community relationships and deal with a range of community problems that regular police have neither the time nor the knowledge to address. They are both a police presence in the community and support for regular police services. Because they are not regular police officers, they can be recruited for different skill sets and from diverse social backgrounds and have lower salary levels, which makes them appropriately skilled and cost-effective. Their introduction has proved popular with the public despite some internal implementation problems (Higgins, 2018). The British government remains committed to PCSOs as the key to a community-engaged model of police service (Higgins, 2018).

As described in Part 2 of this report, Canada has made some similar but smaller-scale attempts to develop a community alternative to deploying regular police officers, including the RCMP’s civilian community program officers (CPOs) and special community constable programs. However, despite the apparent need and cost effectiveness of community officers, there is an apparent reluctance by many Canadian police services and their police associations to support using this alternative to regular police to perform community policing functions (Huey et al., 2020).

### CERP Implications and Requirements

Developing and implementing a CERP model requires recognition of the problems and limitations of the existing rural policing model and, further, requires that the police, community, and local government come together to implement community engagement strategies. This tripartite arrangement requires each sector to meet some minimal requirements in order to move the community engagement agenda forward.

#### Police

Police need to acknowledge the limitations of the current rural police service model and commit to providing a more community-engaged policing model. A renewed community-based model of police service commits to being both preventative and reactive and allocates adequate resources and expertise to make it possible. This change requires local management autonomy for local detachment commanders, a style of police management that is flexible and analytical, and a willingness to experiment with a variety of community-specific engagement strategies. While these

## PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE AND MODELS

are incremental changes to the current policing model, they nevertheless represent real change. As such, they may present significant challenges to the general organization and management practices of the RCMP's standard contract policing model.

### Community

A community-engaged model of rural policing requires the public and community to actively seek changes to the current service model and be willing to advocate and support the changes required. Without public pressure or demand for change, it is unlikely that change will take place. A community-engaged policing model requires community advocacy and participation in community-based policing initiatives and programs. Communities and their agencies need to actively collaborate with police in the program they develop to enhance community protection and security. An enhanced and community-engaged model of local police service may require more financial investment in local policing and local taxpayer support.

### Government

Both provincial and local governments need to be more actively involved in the governance of rural policing. As representatives of the community, they must hold the police accountable for the quality and effectiveness of local police services. They must, as representatives of the community, effectively communicate community safety interests and policing concerns to the police. Informed local police governance is based on a knowledge of the actual operations and policies used to deliver police services in their jurisdiction. Local governments and police boards need to have regular consultation and meaningful exchanges with police management, in addition to yearly reporting. Improving local police governance may require more support for police boards, commissions, and other community committees. Where there is a demonstrated need for community-engaged police service, increased local government funding may be required, which should be tied to specific community policing policies and demonstrable outcomes.

## Summary

This report has argued that a CERP model is the best response to the special challenges and limitations of rural policing. We have outlined the key principles of a community-engaged policing model, with an appropriate organizational and managerial structure, and a variety of possible community-engaged policing strategies and programs. A community-engaged policing model can address many of the challenges of community-distant rural policing service and will improve the effectiveness of conventional police response. While a community-engaged model may require some rethinking, reorganizing, and adjusting, it does not require dramatic transformational change or a significant increase in police resources.

## PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE, AND MODELS

## B. Alternative Models of Community-Engaged Local Police Service

We now turn to examine three alternative models for the delivery of community-engaged local policing and to assess the potential benefits (pros), limitations (cons), and the organizational and fiscal requirements of each option. This will provide a basis to compare and contrast potential policing alternatives for CERP in Nova Scotia. The models are (1) the RCMP detachment model, (2) a local municipal police model, and (3) a provincial police model.

### RCMP Detachment Model

We want to preface this analysis by acknowledging that the RCMP has significant organizational strengths that contribute to the overall safety and security of all Canadians. Frontline members and employees are diligent in their efforts to meet or exceed the expectations of the variety of communities they serve. The issues we explore here focus on the institutional and organizational aspects of the RCMP and are not a reflection on the professionalism or humanism of those employees working every day, often under arduous circumstances, to serve their communities.

#### Benefits (Pros)

- Historically, the RCMP has offered a lower-cost policing model than alternative police agencies could. The federal contribution<sup>5</sup> to overall local policing costs is an important consideration for many communities (Public Safety Canada, 2019; Roach, 2022: 144).
- Under the RCMP detachment resourcing model, compared to other police agencies, the RCMP calls upon fewer officers to undertake the same levels of work. This cost advantage may change as a result of the recent unionization of the RCMP.
- The RCMP is unique in the Western world in that it provides a fully integrated law enforcement and intelligence-gathering policing model across its business lines (e.g., contract policing and federal policing).<sup>6</sup> At least conceptually, this provides a seamless approach to understanding and addressing the myriad of issues occurring in rural communities right through to the international arena. Furthermore, the integrated model provides a high degree of adaptability for communities facing either foreseen or unforeseen challenges.
- Its centralized and unified command structure allows the RCMP to share or exchange resources within and across, its business lines (e.g., federal and contract policing). For

<sup>5</sup> The cost-sharing arrangement with the federal government may be of particular importance during times of fiscal austerity. Under the current twenty-year agreements (in effect to 2032), the federal government pays a share of the policing costs of contract jurisdictions. Provinces, territories, and municipalities with populations under 15,000 now pay 70%, and municipalities with populations over 15,000 pay 90% of eligible costs.

<sup>6</sup> The other two RCMP business lines are specialized policing services (formerly known as national police services) and corporate services.

## PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE, AND MODELS

example, the RCMP is able to mobilize personnel from across its various business lines when a surge of resources is required for local planned or unplanned major events or local emergencies.

- Its national standards ensure that the RCMP maintains consistent levels of policing across the Canadian jurisdictions it serves.
- The RCMP provides a high calibre of basic and advanced training, further supported by a strong regimen of mandatory maintenance training requirements and certifications (e.g., firearms training, first aid, etc.).
- The detachment model described earlier has proven useful in ensuring professionalism and independence, making it less likely to be swayed by local political or social pressures (i.e., to selectively enforce the law). In other words, they have a history of enforcing the law and delivering police services “without fear or favour” (Murphy, 1991: 335).
- The men and women who make up the RCMP come from all backgrounds and parts of Canada. Communities benefit from the diversity and infusion of new perspectives from across the country.

#### Limitations (Cons)

- The RCMP continues to be pulled in multiple directions across the breadth of its broad mandate.
- The absence of effective local civilian governance (police advisory boards) can result in the RCMP detachment commander setting priorities and strategies with little community consultation. While the legislated mandates for police advisory boards in Nova Scotia offer the opportunity for effective local governance, the reality is many police boards across Canada fail to provide effective police governance (CBC Ideas, 2003; Roach, 2022; Kelcey, 2022).
- RCMP partners have long expressed the desire for increased RCMP accountability to local governments and communities. This includes more effective relations with police advisory boards, greater input into the selection of detachment commanders and other key leadership positions and greater input on issues such as the integration or regionalization of policing services (Britneff, 2022; personal communications between Cal Corley and a variety of relevant stakeholders).
- The levels of community engagement on issues such as establishing local policing priorities is often a function of detachment leadership (i.e., whether the detachment commander is inclined toward such consultation) and can fluctuate dramatically from one commander to the next.

## PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE, AND MODELS

- The adaptive capacities of detachments can be limited by internal RCMP policies and procedures that may establish barriers to deviating from district, divisional, or national priorities or policies.
- The RCMP human resourcing model can inadvertently impede the local ability to effectively identify and implement innovative solutions and approaches. Local solutions must be tailored to local conditions, which in turn requires an in-depth and nuanced understanding of multiple elements of the community itself.
- RCMP officers in rural settings may not be able to develop such in-depth knowledge due to factors such as not having been raised in rural settings or having only limited exposure and involvement in the particular community.
- Turnovers in senior leadership positions can place innovations in a precarious state since, in the absence of effective police governance, every new leader can discontinue or at least not support novel approaches or other changes established by the previous regime.
- Internal RCMP culture, accentuated by a lack of resources in detachment policing, enhances the importance of its law enforcement and criminal investigative roles. Though not unique to the RCMP, there is far less emphasis given to proactive community engagement and crime prevention activities. As McKenna (2008) has noted, the police have “a much greater appetite for presenting themselves as crime fighters ... than as community leaders or agents of social change” (4).
- RCMP detachments generally track and report on outputs of activities (e.g., calls for service, traffic tickets issued, rates of crime, clearance rates, etc.) but not the outcomes or impacts of proactive and preventative efforts. Such traditional measures of police performance do not generally provide the insight into how these output-focused measures can lead to improved community safety outcomes. Without measuring outcomes, the detachment is unable to provide evidence that its activities are producing the desired results. All of this translates into what detachments provide by way of updates to police boards and local councils. The nature, depth and frequency of these interactions between detachment commanders and police advisory boards shape important qualities of the relationship between the detachment and the community. This can have important implications for collaboration, accountability and the effectiveness of service delivery.
- Communities are beholden to the RCMP’s recruitment and staffing processes, which have to prioritize requirements across Canada and often result in significant limitations in the ability to staff vacancies in a timely manner. The federal government and the RCMP have acknowledged the recruiting challenges and implications for contract policing (Public Safety Canada, 2019). RCMP partners over at least the last twenty years have expressed frustration over the organization’s inability to respond to resourcing requests in a timelier fashion.
- Local and provincial governments have also long expressed concern and frustration over the disconnect between RCMP financial cycles and corresponding information flows (e.g.,

## PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE, AND MODELS

upgrades of weaponry, new equipment requirements, etc.), which often do not align with local planning cycles, thus causing angst among contracting partners (CBC, 2016).

- Internal policies and some federal legislation (e.g., the Privacy Act) can inhibit the RCMP's ability to share data and information with partner agencies in a timely manner, thus affecting inter-agency relations and cooperation.
- The single national pay scale for RCMP officers does not provide flexibility to adapt to local economies.

### Local Municipal Police Model

Another alternative lies in a single community or multiple communities establishing their own local police service. This option provides the government with an opportunity to start afresh—to design and implement a fit-for-purpose police agency to meet the contemporary and evolving requirements of the communities served, to build the initial workforce with the requisite skills and abilities, and to set in place a workplace culture that is aligned with these requirements.

#### Benefits (Pros)

- A local municipal police model provides local control over its policing services. The police board is able to select and hire a chief of police who shares their vision. The chief can be mandated to implement a strategic plan to achieve such vision and be assessed against measurable results and outcomes. The average chief of police in Canada serves just over five years in role (Hodgkinson, 2022), a longer duration than the average RCMP detachment commander.
- Assuming a greater emphasis on recruiting local officers, a municipal police service would be more familiar with the communities and surrounding rural areas, including local culture, values, history, relationships with neighbouring communities, what local capabilities and capacities may be called upon in a community safety (CERP) context, and social structure (both formal and informal).
- Pay and benefits can be tailored to local economies. However, it is unclear given unionization whether over the mid to long term there would be any financial advantage in having local unionized police officers.

#### Limitations (Cons)

- This model is not eligible for the current federal contributions, which means that at least theoretically, the costs of local policing would increase by up to 30%. This does not account for possible provincial grants or other funding arrangements. Similarly, it does not account for potential one-time start-up costs.

### PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE, AND MODELS

- The range of in-house policing expertise and specialization (e.g., canine, major crime investigations, etc.) in a small rural police service would be limited, with cost-back arrangements negotiated with larger entities to provide such services when required.
- A stand-alone local police service would not be able to provide enhanced levels of service (e.g., advanced forensic identification services, major case management, etc.) from within one integrated police agency, as is currently provided for under the policing contract with the RCMP. This could add considerably to the cost of this model.
- The limited size and resources of a municipal rural police service may limit the attraction and retention of highly qualified or specialized police personnel.
- A unionized local municipal rural police service might limit the flexibility and efficiency of the agency by imposing rules that limit numbers of officers, hours of work, etc., which may add to the cost and/or reduce effectiveness. A municipal service may need more personnel to police rural areas than previous RCMP resource levels, thus adding significant cost.
- As a municipal government service, a municipal-based rural policing service may prioritize its municipal policing functions and responsibilities at the expense of its rural policing requirements.

#### Provincial Police Model

This approach would see Nova Scotia create its own provincial police service with responsibilities that include rural and small-town policing. This option would give the provincial government an opportunity to design and implement a fit-for-purpose provincial police service to meet the province's contemporary and evolving requirements.

#### Benefits (Pros)

- A provincial police service could reflect the unique characteristics of the province and could be largely staffed by personnel with strong roots in the province. It could therefore have greater sensitivity and understanding to local culture, customs, geography, etc.
- A provincial police model would allow for stronger provincial control over policing, together with a police agency that is solely accountable to the province and its communities.
- There would be opportunity to integrate back-office functions (e.g., human resources, information technology, etc.) with existing Nova Scotia services and infrastructure, thereby creating efficiencies.
- As a large organization, provincial police would have the scale to invest in specialized and enhanced services, research, and development, etc. on behalf of all police agencies in the province. Furthermore, it would provide enhanced policing support (e.g., major crimes investigations) to small police agencies.

## PART 3: COMMUNITY-ENGAGED LOCAL POLICING: PRINCIPLES, PRACTICE, AND MODELS

- Such a model would provide a more predictable level of police service and uniformity so that policing services would be more equitable among areas of the community.

Limitations (Cons)

- Evidence suggests that transitioning to a provincial police service would entail substantial additional costs to be borne by provincial taxpayers. First, the province would no longer benefit from the current 30% federal contribution to provincial policing. Secondly, there would be substantial costs associated with transitioning to a provincial police service. For example, the recent study into the potential transition to a provincial police service in Alberta estimates a one-time start-up cost of \$366 million over the anticipated five-year transition period (Dawson, 2021; PriceWaterhouseCoopers, 2021).
- Provincial police detachments would have many of the same resource challenges and service limitations as the local and regional RCMP detachments they would be replacing.
- Provincial control and policing standards would likely be a priority over local community control and standards, so there would not necessarily be local political advantage to this arrangement.

**Conclusion**

While both the municipal police and provincial police models should be in better positions to know and understand communities and their safety and security needs, this would not necessarily translate into more responsive and accountable community-engaged policing. In fact, most police agencies across Canada have adopted the conventional reactive model of professional policing.

The RCMP has an opportunity to take stock of nearly twenty years of both internal and external recommendations for reform and to make adjustments to its structure, policies, and internal culture that could address most of the issues surfaced in this and other critiques of its performance. However, it must know that history is not on its side; its record of reform is in itself cause for concern (Leuprecht, 2017; Perrott & Kelloway, 2011).

Ultimately, any one of these three models could support a community-engaged policing service—but only if the police agency, the communities, and local/provincial governments are collectively committed to delivering the kind of policing rural communities require. Each model has its own advantages and disadvantages. It will be up to the communities themselves to decide the kind of police service they want to address their particular safety and security concerns.

## **I. Development of Firearm Regulation in Australia**

### **1. Pre-1996 Context**

#### *A. Firearm Ownership and Firearm Violence*

Australia's relationship with firearms before the 1990s could be described as permissive and accepted. Despite a high degree of urbanisation, the notion of the Outback (with its associated gun ownership) loomed large in the popular imagination. Data were scarce due to poor record-keeping, but in 1988, when the country's population was sixteen million, it was estimated that one quarter of households contained a gun; the total civilian arsenal was estimated at 3.5–3.75 million firearms, or one gun for every four people, having risen from one gun for every five or six people over the previous decade (Chappell et al., 1988). The weapons were mostly rifles and shotguns, with only about 5% being handguns (Harding, 1988). In contrast, handguns constituted about one third of the US arsenal in the 1990s (Alpers, Picard, & Pavesi, 2022b). The overwhelming majority of firearms in Australia were imported, as local manufacturing for civilian use was almost non-existent (Australia, 2018: 26).

Rates of death by firearm in Australia tended to be slightly higher than in most European countries but only a fraction of US rates (Alpers, Picard, & Pavesi, 2022c; Alpers, Picard, & Pavesi, 2022d). At least 75% of gun deaths were suicides (Kreisfield, 2006). Guns were the most common method of suicide and of homicide (Chappell et al., 1988) and especially common in domestic killings (Wallace, 1986; Condie, 1988; Neal, 1988). Mass shootings occurred about once a year (Alpers & Ghazarian, 2019).

#### *B. Firearm Regulation*

Before 1996, Australia regulated firearms more strictly than the United States but not as strictly as other democracies such as Japan, Canada, and some European countries (Swain, 1996). As in the United States, gun laws varied across the country because gun control was primarily a matter for the states and territories. The federal government's involvement was limited to regulating imports and exports, although the National Committee on Violence had recommended a federal

role in regulating gun sales within Australia (see discussion below). According to Reg 2c of the Customs (Prohibited Imports) Regulations 1956, all firearms were permitted for importation except automatic or semi-automatic rifles and shotguns suitable for use with detachable magazines that held more than five rounds, those ‘designed or adapted for military purposes’, and guns capable of being fired with the stock folded or removed.

The national regulatory patchwork encompassed wide variations among the eight Australian states and territories (Peters, 1996). Fully automatic weapons were banned in Western Australia, the Northern Territory, and the Australian Capital Territory (ACT) but permitted for collectors and/or film productions in the other states. Victoria required a special permit for semi-automatic centrefire (but not rimfire) rifles; Western Australia banned all centrefire weapons with detachable magazines; and Tasmania and Queensland made no regulatory distinction between single-shot .22 rifles and semi-automatic assault weapons. Some states required all guns to be registered, while others did not. All jurisdictions required a licence for purchase of firearms, but the screening process also varied, so a person barred from owning guns in one state could legally own them in another. For example, New South Wales (NSW) prohibited guns for anyone with a domestic violence restraining order in the previous ten years; but in Tasmania and Western Australia, even a current restraining order was only a ‘relevant factor’ to take into account. Some jurisdictions required licence applicants to prove their reason for having a gun (sport, hunting, agriculture), while others did not. As the federal government later admitted, the patchwork approach also led to diversion of firearms to the illicit market, ‘facilitated to an extent by loopholes in legislation and regulation, lack of oversight, and low penalties that were applied to firearm offences’ (Australian Government Attorney General’s Department, 2014: 3).

One element was consistent across the nation: relatively strict regulation of handguns. All jurisdictions limited these weapons to pistol club members and security guards, and all required the ownership and transfer of handguns to be registered with the police. Personal self-defence was not a legal reason for gun ownership; the only civilians allowed to carry loaded weapons were security guards.<sup>1</sup> In this regard, Australia was similar to European nations and Canada – and different from the United States, where, by 1997, 31 of 50 states required local law

---

<sup>1</sup> In most jurisdictions, self-defence was simply not included in the list of legal reasons; but South Australia and NSW explicitly disallowed this reason in their laws, according to the Firearms Regulation 1990 and Reg 12 of the Firearms Regulations 1993.

enforcement ‘to issue permits to carry concealed handguns to any adult applicant who [did] not have a felony conviction or a history of serious mental illness’ (Webster & Ludwig, 2000: 2) This restrictive approach accounted for Australia’s low level of handgun possession and helped to contain firearm mortality compared to the United States (Polk & Ransom, 1991).

### *C. Pressure for Reform*

Since the early 1980s, concern about weak gun laws had been mounting in the Australian public health, women’s rights, and legal communities. Each high-profile shooting produced a burst of media coverage and public outrage, followed sometimes by an inquiry or expert review and occasionally by legislative amendments in individual states.<sup>2</sup> Recommendations for reform in the wake of such tragedies had been made by at least twelve expert bodies.<sup>3</sup> The most comprehensive review was conducted by the National Committee on Violence (NCV), established in 1989 after two mass shootings in Victoria (National Committee on Violence, 1990). The NCV examined all aspects and types of violence, direct and indirect contributing factors, victim support, as well as strategies for response and prevention. Over the course of a year, it held hearings around the country and received over 400 written submissions. Its 138 recommendations included about twenty related to firearm regulation. The NCV called for national uniform gun laws, uniform guidelines for enforcement, and the development of a national gun control strategy aimed at (a) reducing the number of firearms in Australia and (b) preventing access to firearms by individuals who were not ‘fit and proper persons’ (NCV, 1990). Some of the NCV recommendations were incorporated in amendments to the NSW Firearms Act in 1992, including seizure of guns from domestic violence offenders, safe storage requirements,

<sup>2</sup> For example, after the Strathfield shopping centre massacre in Sydney, the state parliament conducted an inquiry, eventually resulting in changes under the Firearms Legislation (Amendment) Act 1992 (Garcia, 1991; Moore & Clarke 1991). The most important changes were obligatory seizure of firearms and suspension of licences held by domestic violence offenders; a separate category of licence for self-loading centre-fire rifles and semi-automatic shotguns, with the requirement to provide a genuine reason; permitting ammunition sales only to firearm licence holders; safe storage requirements; and incorporation of a photo on gun licences. In addition, personal protection was explicitly excluded as a reason for possessing firearms. The changes did not include requiring registration or proof of reason for firearms generally.

<sup>3</sup> Women’s Policy Co-ordination Unit (1985); Australian Law Reform Commission (1986); Task Force on Domestic Violence (WA) (1986); Queensland Domestic Violence Task Force (1988); Social Development Committee (Parliament of Victoria) (1988); National Committee on Violence (1990); Joint Select Committee upon Gun Law Reform (NSW Parliament) (1991); Law Reform Commission of Victoria (1991); NSW Domestic Violence Committee (1991a); NSW Domestic Violence Committee (1991b); NSW Domestic Violence Committee (1991c); National Committee on Violence against Women (1993).

and stricter licence conditions for owners of semi-automatic rifles. However, the most critical recommendations for national uniform laws with a national firearm registration system were not taken up by the states and territories – a fact lamented by the NCV director after the Port Arthur massacre several years later (*'Beyond Gun Laws'*, 1996).

A grassroots campaign for gun law reform also gathered momentum from the mid-1980s. Australians who thought gun violence was a US problem were shocked as each shooting tragedy revealed glaring policy defects. They took to the streets in protest (see Voumard, 1991; Macey, 1996). Community and professional organisations adopted policy positions, lobbied politicians, made submissions to review committees and inquiries.<sup>4</sup> Their reform agenda was based on public health principles of prevention and on the recommendations from the NCV and the other reviews (Peters & Chapman, 1995).

By the mid-1990s the National Coalition for Gun Control (NCGC) brought together over 300 organisations, including public health and medical societies, women's groups, legal and human rights bodies, mental health groups, rural organisations, churches, trade unions, and associations of senior citizens, parents, young people, and crime victims. Participants ranged across the political spectrum, from the Country Women's Association to the Council for Civil Liberties, from the War Widows' Guild to the Gay & Lesbian Anti Violence Project. This diversity reflected the multiplicity of dangers that guns pose in society: some campaign members were especially concerned about domestic violence, others about crime on the streets, youth suicide, or occupational risks for police and bank tellers. Their common conviction was that guns are by design inherently dangerous products, the availability of which should be strictly regulated in the interests of public health and safety (Peters, 1998).

The breadth of the coalition also reflected the status of gun law reform as a mainstream concern rather than the preserve of a single-issue lobby group. Opinion polls had long indicated that the overwhelming majority of Australians believed the country should have tough uniform gun laws (Chapman, 2013; Norberry, Woolner, & Magarey, 1996). Yet the issue was often

---

<sup>4</sup> For example, over 250 submissions were made to the NSW Parliament's Joint Select Committee upon Gun Law Reform (Lagan, 1991), while some 180 submissions were made to the coroner's inquiry into the shooting of two police on a domestic violence call at Crescent Head, NSW (Lagan, 1995).

framed by the media as a tug-of-war between gun control activists and the pro-gun lobby.<sup>5</sup> The latter was not as powerful as its US counterpart, lacking the financial base of a firearm manufacturing sector. However, Australian parliamentary elections are often determined by the results in districts where the electoral margins are slim (Wanna, 2022). While surveys showed that most gun owners did not oppose tighter gun laws, the gun lobby relied on a small but very energetic group who claimed to vote solely or largely on this issue. For years, they had succeeded in blocking proposed reforms by threatening to organise local campaigns against parliamentarians in marginal seats (see, e.g., Cockburn 1996; Davidson 1996; and Chapman 2013). Thus, despite legislators from both major political parties acknowledging the need for comprehensive reform, neither party was prepared to make the first move publicly (Chapman, 2013: 62–63). The topic was raised repeatedly at meetings of the Australasian Police Ministers' Council (APMC), but police ministers are also members of parliament and therefore concerned about elections. Campaigners had attempted to persuade the two major political parties to move simultaneously toward tighter laws, but the highly adversarial nature of Australian politics had prevented this shift from occurring.

## 2. The Port Arthur Massacre

The turning point for firearm regulation in Australia occurred on 28 April 1996, when a young man with no recorded history of mental illness or crime, armed with semi-automatic weapons, killed 35 people at one of Australia's most popular tourist destinations, the Port Arthur historic site in the island state of Tasmania. Nineteen other people were seriously injured in the attack. The guns used were legally available in Tasmania but banned in most other states; in fact, Tasmania had the country's weakest gun law (Peters, 1996). It was a devastating demonstration of the need for national uniform regulation. Most of the victims were tourists visiting from other states with stronger laws; it had probably not crossed their minds that travelling within the country on holiday would mean forgoing protection from rapid-fire weaponry.

---

<sup>5</sup> See, for example, the televised debate in 1992 on Channel 9's *A Current Affair* between Robert Corbin of the US National Rifle Association and Simon Chapman of the NSW Coalition for Gun Control (as cited in Chapman, 2016b); and the one in 1996 on Channel 7's *Today Tonight* between Ian McNiven of Gun Owners of Australia and Rebecca Peters of the National Coalition for Gun Control (as cited in Chapman, 2016a). In both cases, the pro-gun speakers articulated extreme views that focused on guns for self-defence, a particularly 'fringe' aspect of the issue in Australia.

At the time, the Port Arthur deaths constituted the second largest massacre by a single shooter ever recorded globally.<sup>6</sup> It ignited an explosion of public sorrow and outrage, as the nation demanded overhaul of the gun laws.<sup>7</sup> The Prime Minister summoned the Australasian Police Ministers' Council and proposed a plan for strict uniform gun laws to be enacted across the country. Twelve days after the massacre, the Police Ministers agreed that all jurisdictions would adopt the National Firearms Agreement (NFA) (Australasian Police Ministers' Council, 1996). The NFA, which will be examined further below, included most of the measures recommended by the previous inquiries and therefore most of the reform agenda promoted by the NCGC. The adoption of the NFA was followed by more than a year of intense lobbying and argument over detail, as state and territory parliaments translated the agreement into legislation.

*Box 1: Voters in Western Australia Affirm Public Support for the NFA*

In December 1996, the National Firearms Agreement faced its first test at the ballot box. In the Western Australia state election, the uniform national gun control measures, which had been agreed 3,000 km away in Canberra, were hotly contested within the state's ruling party. Although its Police Minister had signed the agreement, the Canberra consensus was opposed by the leaders of both his own party and its coalition partner, one of whom was the state Premier. Independently of the grassroots movement then dominating debate and support for gun control in central and eastern states, the local branch of the Australian Medical Association and the newly formed Coalition for Gun Control successfully countered the widespread local and mainly rural opposition on the West Coast to the national agreement. Following months of public pressure, the ruling coalition state government was returned to power, but only after reversing its opposition to gun law reform (Anthony, 1996; Agence France Presse, 1996). More than 25 years later in 2022, faced with significant increases in private gun ownership, the most recent Labor government of Western Australia announced a 'complete rewrite' of the state's gun laws, which were, in the opinion of the Police Minister, too permissive (Law, 2022).

### 3. Policy Responses

#### A. The National Firearms Agreement

The NFA sets minimum standards for all states and territories to regulate the import, sale, purchase, possession, and use of firearms. The most important elements are a ban on self-loading rifles and shotguns, registration of all firearms, and more stringent licensing procedures,

<sup>6</sup> The deadliest massacre occurred on 26 April 1982 in Uiryeong County, South Korea, when a police officer shot and killed 62 people and injured 33 others, a cross several villages before committing suicide. See [https://en.wikipedia.org/wiki/Woo\\_Bum-kon](https://en.wikipedia.org/wiki/Woo_Bum-kon)

<sup>7</sup> For examples of the many news stories on the topic, see Montgomery & Gordon (1996); Steketee (1996); Chan & Gordon (1996); Farr (1996); Milliken 1996; 'Wanted Now: A National Ban on Deadly Guns' (1996); 'Australians Call for Tough Gun Laws after Massacre' (1996).

including the obligation to prove a ‘genuine reason’ for possessing a gun, as laid out in Resolution 3 of the Agreement.

When it comes to proving a ‘genuine reason’, personal protection is specifically ruled out. This did not mark a major substantive change but rather made explicit an implied norm, since (as mentioned earlier) personal protection and self-defence were not among the acceptable reasons for a gun licence even pre-NFA. However, not all jurisdictions had previously required applicants to prove a reason, and research had shown that ‘fear of crime’ was the motivation underlying weapons acquisition for up to one third of gun owners (Chappell et al., 1988).

The National Firearms Agreement is summarised in **Table I.1**. The NFA contains eleven resolutions: ten core measures to incorporate into state and territory legislation, plus a one-off amnesty with compensation (a ‘buyback’) to encourage owners to surrender newly prohibited self-loading weapons. Most planks of the Agreement were already in the gun laws of at least one Australian jurisdiction, but the new scheme was more robust and coherent than any of the existing laws.

*Table I.1: A Brief Summary of Key Parts of the National Firearms Agreement (1996)*

<p><b>1. Ban on automatic and semi-automatic long arms</b></p> <p>Ban on import (by Federal Government), sale, resale, transfer, ownership, possession, manufacture, and use</p>
<p><b>2. Registration of all firearms</b></p> <p>Integration of licensing and registration systems across the country</p>
<p><b>3. Licence applicants must prove ‘genuine reason’ for every firearm they wish to possess</b></p> <p>Exclusion of personal protection as a genuine reason; applications for Category B, C, D and H licences (see below) also require proof of ‘genuine need’</p>
<p><b>4. Uniform minimum licence requirements</b></p> <ul style="list-style-type: none"> <li>• Minimum age (18 years), proof of genuine reason, be a ‘fit and proper person’, safety test, waiting period of at least 28 days</li> <li>• Photo licence showing the holder’s address and the category of firearm, valid for a maximum of five years before requiring renewal</li> <li>• Storage requirements, inspection by police, licence withdrawal and seizure of guns in certain circumstances</li> <li>• Categories of licences and firearms:                     <ul style="list-style-type: none"> <li><b>Category A:</b> air rifles; rim fire rifles (excluding self-loading); single- and double-barrel shotguns</li> <li><b>Category B:</b> muzzle-loading firearms; single-shot, double-barrel and repeating centrefire rifles; break-action</li> </ul> </li> </ul>

shotgun/rifle combinations

**Category C:** (prohibited except for certain occupational purposes, later expanded to include some clay target shooters): semi-automatic rim fire rifles with maximum 10-round magazine; semi-automatic shotguns with maximum 5-round magazine; pump action shotguns with maximum 5-round magazine

**Category D:** (prohibited except for official purposes): semi-automatic centrefire rifles; semi-automatic shotguns; pump-action shotguns with a capacity over five rounds; semi-automatic rim fire rifles with capacity over ten rounds

**Category H:** all handguns, including air pistols

#### **5. Prerequisite safety training before licensing**

Accredited course for first-time licence; specialised course for security industry employees

#### **6. Grounds for licence refusal / cancellation and seizure of firearms**

- General reasons: not of good character, conviction for violence in past five years, contravention of gun law, unsafe storage, no longer having genuine reason, failure to notify of change of address, licence obtained by deception, not in the public interest
- Specific reasons: restraining order or serious assault conviction in past five years
- Mental or physical fitness: reliable evidence of a condition that would make applicant unsuitable to possess a gun

#### **7. Permit to acquire**

Separate permits required for the acquisition of every firearm, with a waiting period of at least 28 days

#### **8. Uniform standard for the security and storage of firearms**

- Guns must be kept locked, ammunition stored separately; failure to store firearms safely is an offence
- Specific storage requirements for different categories of firearms
- Additional rules for safekeeping of firearms when temporarily away from the usual place of storage

#### **9. Recording of sales**

- No private or backyard sales: all sales to be conducted by or through licensed firearm dealers
- Dealers must ensure purchaser is licensed and provide details of each purchase and sale to firearm registry
- Ammunition sold only for guns for which the purchaser is licensed; limits on the quantity that can be purchased

#### **10. No mail-order sales**

- Mail order only allowed from licensed gun dealers to licensed gun dealers
- Advertisements conducted only by or through licensed gun dealers

#### **11. Buyback and destruction of self-loading weapons**

- Fair and proper compensation, based on the value of each firearm as at March 1996
- twelve-month amnesty to surrender banned weapons

## Firearm Regulation in Australia

The key components of a gun control regime are not discrete but interdependent. Owner licensing is intended to ensure that guns are in the hands of only appropriately qualified individuals; but it cannot fulfil this function unless it is supported by firearm registration. Registration in turn is flawed if the law allows for a buyer to take possession of the gun before registering it, as is the case in some countries when a car is sold. The NFA contains two measures to close the circle of accountability: a pre-purchase permit to acquire, which initiates and gives notice of the process of a firearm changing hands; and a ban on private sales. All gun transfers must go through licensed firearm dealers, who thus become part of the enforcement machinery. Dealers have a strong incentive to ensure compliance with the law, since their own licences and livelihood are on the line if they provide a weapon to someone not appropriately licensed or for whom a permit to purchase has not been approved. Another section of the firearm-owning community was also incorporated into the new regulatory scheme: police-approved shooting clubs are the providers of safety training required for obtaining a gun licence. Many of the shooting organisations were originally opposed to the NFA (Hills, 1996; Tidswell, 1996), but over the years they have benefited financially from the fees for compulsory membership (Alpers, 2016).

Further notable provisions in the NFA include regulation of ammunition, safe storage requirements, and a five-year ban for domestic violence offenders. The primacy of public safety is recognised by other grounds for licence refusal and cancellation that allow for discretion and common sense: if the individual is ‘not of good character’, if a mental or physical condition makes them unsuitable, or if their possession of firearms is ‘not in the public interest’. The latter principle has been invoked, for example, in cases where possession of firearms could enable access to weapons by another household member who would be disqualified from holding a licence in their own name (Reuter & Mouzos, 2003).<sup>8</sup>

---

<sup>8</sup> The courts have upheld the denial of licences or the imposition of a Firearms Prohibition Order on the basis of ‘public interest’ in cases such as: when the applicant’s son was at serious risk of suicide (*Emery v Commissioner of Police* [2022] NSWCATAD 122); when the applicant had a clean record but belonged to a motorcycle gang known to have criminal connections (*Savage v Registrar of Firearms* [2021] SASC 144); and when the applicant was married to a man who had been prohibited from possessing firearms (*Philp v Commissioner of Police, NSW Police Force* [2014] NSWCATAD 25).

**Box 2: Firearm Possession as a Conditional Privilege**

One topic of intense public discussion after Port Arthur was the status of gun ownership in Australia as a privilege rather than a right (Howard, 1996). The new laws subsequently adopted by most of the states and territories included variations of an explicit declaration that possession of guns is a privilege.<sup>9</sup> This statement was subsequently confirmed by the High Court of Australia.<sup>10</sup> When the NFA was updated in 2017 to incorporate additional norms agreed among the jurisdictions over two decades, its opening paragraph affirmed that ‘firearms possession and use is a privilege that is conditional on the overriding need to ensure public safety’ (Council of Australian Governments, 2017). This marks a fundamental difference from gun discourse in the United States.

**B. The Buyback of Prohibited Weapons**

Point 11 in the NFA was a buyback program to remove the newly prohibited arms from circulation. During a year-long amnesty, self-loading rifles, shotguns, and parts could be surrendered to police for compensation and destruction (Australian National Audit Office (ANAO), 1997). This was the aspect of the reforms that attracted most international media interest, generating dramatic images of huge piles of surrendered firearms bound for the smelters (Brazil & Berry, 1997; Sullivan, 1997). The first federal gun buyback program (1996–97) became the world’s largest civilian firearm collection system, with an official tally of 659,940 weapons handed in (Reuter & Mouzos, 2003).

The main buyback was funded by the federal government but run by the states and territories, leading to some variation in implementation. To prevent guns from moving around the country in search of higher payment, fair rates of compensation for each type and model were compiled in a national uniform schedule (ANAO, 1997). Compensation was paid for all newly banned weapons, whether legally owned or not, including dealer stocks of weapons and components. Dealers were asked to hand in their stocks immediately in return for compensation at their published retail prices of 1 March 1996. This halted the sale of prohibited weapons across the country, even before each parliament had changed its laws. According to ANAO (1997), in some jurisdictions, compensation was also provided for fully automatic weapons that

<sup>9</sup> The NSW and ACT laws “confirm firearm possession and use as being a privilege that is conditional on the overriding need to ensure public safety” according to s. 3 of *Firearms Act 1996* (NSW) and s. 5 of *Firearms Act 1996* (ACT). Very similar wording appears in South Australia’s *Firearms Act 2015* (SA) in s. 3. In Victoria, “the possession, carriage, use, acquisition and disposal of firearms are conditional on the need to ensure public safety and peace” from s. 1 of *Firearms Act 1996* (Vic.). In Queensland, “weapon possession and use are subordinate to the need to ensure public and individual safety” according to s. 3 of *Weapons Act 1990*.

<sup>10</sup> Mr Essenberg had claimed a right to own firearms under the English Bill of Rights of 1688, guaranteeing the right of Protestants to have arms for self-defence (*Essenberg v. The Queen*, 2000; *Essenberg v. The Queen*, 2002).

## Firearm Regulation in Australia

were already prohibited before 1996. Non-self-loading firearms could also be handed in under the amnesty, but compensation was not paid for these. Dealers could apply for additional compensation for the loss of business they expected to suffer as a result of the new laws. A survey conducted by the main shooters' group found that most participants were satisfied with the amount of compensation received (ANAO, 1997).

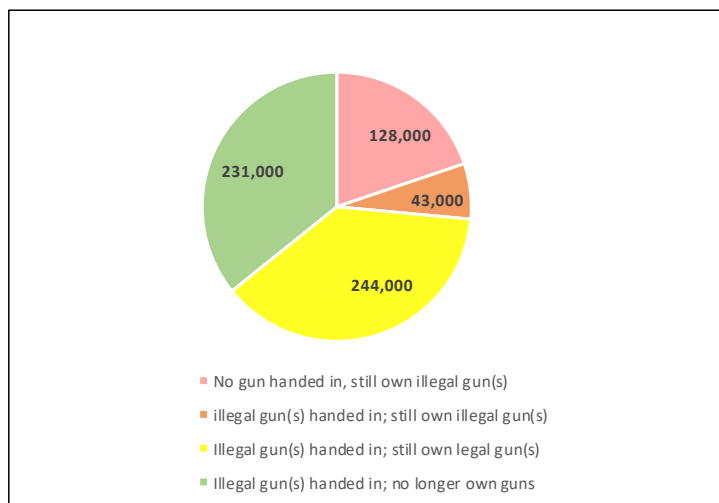

To fund the buyback, the national health insurance levy was increased by 0.2% for one year, raising about AU\$500 million (US\$391 or CA\$468 million in 1997). At the beginning, it was unknown whether this would be sufficient, since no reliable estimate could be made of the number of self-loading weapons in the country. In the end, about 80% of the funds raised, or AU\$398 million (US\$311/CA\$372.5 million) was spent on compensation payments; with AU\$63 million (US\$49/CA\$59 million) going to administration costs, including upgrading police computer capacity across the country to operate the new and enhanced licensing and registration systems (Attorney General's Department, 2006a; ANAO 1997). A further AU\$4 million (US\$3/CA\$3.7 million) went to public education on the reforms, while AU\$1.5 million (US\$1.2/CA\$1.4 million) was put toward firearm training programs (Attorney General's Department, 2006b). The remainder of the funds were applied toward a second buyback in 2002–03, which accompanied additional regulatory reform on handguns (Johns, 2004); the federal handgun buyback removed from circulation some 69,000 weapons, plus 278,000 parts and accessories, for compensation of AU\$97 million (US\$75/CA\$90.4 million) (Attorney General's Department, 2006b).

The audit conducted immediately after the main 1996–97 buyback noted that opportunities were missed to collect useful information (ANAO, 1997). For example, if states had been required to record the details of each weapon destroyed, the data could have been compared against existing records of firearm ownership, sales, and imports. This would have improved the quality and accuracy of the national data set and of estimates regarding the size and composition of the legal and illegal stockpiles.

A telephone survey commissioned by the federal government about three quarters of the way through the buyback sought to fill in some of the knowledge gap (ANAO, 1997). The findings indicated that about 14% of households contained guns, a figure much lower than previously believed. The survey results extrapolated to the population suggested that before the buyback, some 646,000 people (estimated to be 45% of all gun owners) had owned firearms that

subsequently became prohibited. At the time of the survey, 74% of those owners (equivalent to 475,000 people) had handed in all their illegal weapons for compensation; a further 7% (43,000 people) had handed in some but not all their illegal guns; while 20% (128,000 people) had not handed in any. (See **Figure I.1.**) The results of the telephone survey when extrapolated to the population suggested that of the 171,000 people who still retained illegal guns, 84% said they were likely to hand them in during the time remaining in the buyback period. The survey thus suggested that up to 96% of the owners of illegal guns either complied or intended to comply with the buyback.

*Figure I.1. Owners of Illegal Guns during the Buyback Program in 1997*

Source: Australian National Audit Office (ANAO) Performance Audit (18 December 1997), p. 33

After the buyback, the number of guns in the country was estimated at 2.5 million (Reuter & Mouzos, 2003). The national stockpile before the buyback would thus have been around 3.2 million – meaning that one in every five guns was eliminated by the first buyback alone (Reuter & Mouzos, 2003; Chappell et al., 1988).

### *C. Subsequent Reforms*

Six years after the adoption of the National Firearms Agreement, two more national agreements developed by the APMC were incorporated into federal, state, and territory laws. The National

## Firearm Regulation in Australia

Firearms Trafficking Policy Agreement 2002 addressed trafficking with measures to strengthen customs capacity, tighten the regulation of dealers, improve reporting, and introduce specific offences related to illegal manufacturing, trafficking, defacing serial numbers, and falsifying records (APMC Firearms Policy Working Group, 2002). Penalties for firearm offences were also increased. Meanwhile the National Handgun Agreement 2002 restricted the classes of handguns that can be imported or possessed and tightened the rules applying to handgun licence-holders and shooting clubs (APMC, 2002). The Agreement provided for another buyback program in 2003, this time limited to handguns; an additional 68,727 pistols and revolvers were collected and destroyed (Hudson, 2004).

There followed 26 uncompensated firearm amnesties conducted by the country's eight states and territories (Alpers & Rossetti, 2016). In these, tens of thousands of gun owners voluntarily surrendered additional nonprohibited firearms without compensation (Alpers & Ghazarian, 2019). By 2015, at least 1,038,089 privately owned firearms – one third of the estimated national stockpile – are known to have been seized or surrendered and then destroyed (Chapman et al., 2018). The effort to curb the proliferation of firearms is ongoing, with another amnesty in 2017 yielding an additional 57,324 weapons for destruction or registration (National Firearms and Weapons Policy Working Group, 2017). In July 2021, the Federal Government announced a 'permanent national firearms amnesty' allowing unregistered or unwanted firearms to be handed in anonymously and without penalty to police or licensed firearms dealers (Australian Department of Home Affairs, 2021). Meanwhile, the number of guns in Australia has risen again with the importation of over 1.5 million mainly single-shot replacement weapons since 1996 (Alpers & Picard, 2021).<sup>11</sup>

Since 2014, additional policy adjustments have been made at state and territory level: for example, in 2021, Victoria enacted the Firearms and Other Acts Amendment Act 2021 to specify detailed gun storage standards, limit the loan of a firearm by a licensed dealer to 30 days, and clarify what constitutes evidence of identity for dealer licence applicants. Developments at Federal level have included extensive elaboration of the rules to prevent firearm trafficking,<sup>12</sup> as

<sup>11</sup> In 2017, Australia was the world's seventh major importer of small arms, while Canada was ranked third (Florquin, Haïnard, & Jongleux, 2020: Annex A2).

<sup>12</sup> Customs (Prohibited Imports) Amendment (Firearms and Weapons) Regulations 2021; Customs (Prohibited Imports) Amendment (Firearms) Regulations 2020; Customs (Prohibited Imports) Amendment (Shotguns and

well as improvements in record-keeping and information-sharing, police capacity-building, and firearm tracing. The Australian Criminal Intelligence Commission, a federal agency, supports the state and territory government with the Australian Ballistic Information Network, Australian Firearms Information Network, National Firearms Identification Database and the National Firearm Trace Program (ACIC, 2021). These technical improvements play an essential role in delivering the broader promise of firearm policy reform.

Since the Port Arthur tragedy, Australia has had eight federal governments (six Conservative and two Labor),<sup>13</sup> while the eight states and territories have replaced or renewed their governments dozens of times. There have been occasional backward steps,<sup>14</sup> and loopholes have come to light, especially in enforcement.<sup>15</sup> However, the overall framework of the National Firearms Agreement has proved workable and durable over a quarter of a century.

## II. Impact Assessment after 25 Years

### 1. What Has Been Achieved?

The policy changes outlined in the previous section have had a substantial and positive effect on gun violence in Australia. From 1979, leading up to and including the 1996 Port Arthur massacre and before gun law reforms, there were thirteen mass shootings in the country (Chapman, Alpers, & Jones, 2016).<sup>16</sup> In the twenty-two years that followed to April 2018, there were no such incidents (Chapman, Alpers, & Jones, 2016; Alpers, 2022). The number one resolution of Australia's gun law reforms (Australasian Police Ministers' Council, 1996: 1) – namely to remove from civilian possession the rapid-fire weapons shown to be most dangerous in mass

---

Shotgun Magazines) Regulation 2016; Customs (Prohibited Imports) Amendment (Firearms and Other Weapons) Regulation 2015; Customs (Prohibited Imports) Amendment (Firearms and Firearm Magazines) Regulation 2015.

<sup>13</sup> Another Labor government was elected on 21 May 2022 (Basford Canales, Dingwall, & Neale, 2022).

<sup>14</sup> For example, in 2008, the NSW Parliament eliminated the 28-day waiting period for every gun purchase, requiring it only for the first firearm of a particular class (Firearms Amendment Act 2008).

<sup>15</sup> For example, John Edwards was granted a handgun licence despite a history of domestic violence and went on to kill his children and himself (McKinnell, 2021). The NSW Police subsequently overhauled the firearm registry's computer system and began looking for other potential licensing errors (Fife Yeomans, 2022).

<sup>16</sup> A mass shooting is defined here (in line with previous research) as five or more victims, not including the perpetrator, who are killed by gunshot (see Chapman, Alpers, & Jones, 2016: Table 1 footnote; Chapman et al., 2006).

## Firearm Regulation in Australia

shootings – was followed by an immediate, dramatic, and long-term reduction in firearm-related mass killings.

Positive results were also observed in much broader categories of gun death. Between 1979 and 1996, average annual firearm-related mortality was 3.6 per 100,000 people; after the National Firearms Agreement, it dropped to 1.2 per 100,000 people between 1997 and 2013 (Chapman, Alpers, & Jones, 2016). Firearm-related mortality had already been falling in Australia, but changes in the rate of firearm-related death accelerated from an average decrease of 3% per year before gun laws were upgraded to an average decrease of 4.9% per year afterward (Chapman et al., 2006). (See **Figure II.1** and **Figure II.2**.) There were sizable reductions in firearm-related suicides and homicides. The most noticeable drop after gun law reform was in firearm-related suicides, which currently account for about 70% of gun deaths in Australia (Negin, Alpers et al., 2021; Negin, Bell et al., 2021), with no evidence of substitution in methods of suicide (Chapman, Alpers, & Jones, 2016). Globally, Australia had one of the largest annual rates of change in the number of firearm-related deaths between 1990 and 2016 (Naghavi et al., 2018).

*Figure II.1. Rate of Gun Deaths in Australia per 100,000 People, 1993–2019*

## Firearm Regulation in Australia

**Figure II.2.** Rate of Gun-Related Homicide Deaths in Australia per 100,000 People, 1992–2019

Source: Australian Bureau of Statistics, *Causes of Death, Australia, 2019* (2020), compiled at GunPolicy.org (2022)

It is important to note that the number of non-firearm suicides and homicides has also fallen during the past quarter-century in Australia. Reductions in gun deaths overall, however, have been much more substantial. Between 1997 and 2013, there was a 55% reduction in the firearm-related suicide rate (as compared with a 16% reduction in the non-firearm suicide rate) and a 62% reduction in the firearm-related homicide rate (as compared with a 44% reduction in the non-firearm homicide rate).<sup>17</sup> A rare-events model has provided strong evidence that the absence of mass shootings in Australia between 1997 and 2017 was not merely a continuation of a pre-existing pattern (Chapman et al., 2018). No policy other than the sweeping national revision of gun legislation has been suggested to explain the large reduction in firearm-related mortality.

Studies have found that a country's estimated rate of firearm ownership is associated with its rates of firearm-related suicide and homicide.<sup>18</sup> As compared with the United States, Australia has fewer guns per capita, stronger gun regulations, and far lower firearm-related mortality. The effect of gun availability on violent death is substantial. For example, an international meta-analysis of intimate partner violence perpetrated by men found that having access to a gun was

<sup>17</sup> These data points are from David Hemenway's independent analysis of data contained in Chapman, Alpers, et al., 2016.

<sup>18</sup> See, for example, Anestis & Houtsma (2018); Hemenway, Shinoda-Tagawa, & Miller (2002); Miller, Azrael, & Hemenway (2002); Killias (1993).

linked to a more than tenfold increase in the likelihood of killing a partner, as opposed to committing nonfatal violence (Spencer & Stith, 2020).

Recent data from Australia's most populous state, New South Wales, includes non-fatal firearm-related injuries in addition to the mortality data outlined above (Negin, Bell, et al., 2021). Over the period of 2002 to 2016 for which data was available, the overall firearm-related injury rate in New South Wales declined from 3.4 per 100,000 population to 1.8 per 100,000, primarily due to declines in injuries caused by assaults and accidents. The rate of self-harm injuries with firearms remained relatively stable. Analysis has found that assault injuries were more common among younger urban men, while suicides were more common among older men living in rural and remote communities (Negin, Bell, et al., 2021).

These reductions in fatal and non-fatal injuries by firearm have been achieved despite the overall number of guns increasing since 1996. One fifth of the national arsenal was destroyed in the initial buyback, but imports of mainly single-shot firearms over subsequent years more than replaced this numerical reduction.<sup>19</sup> The number of registered firearms in Australia now exceeds 3.5 million – a 62% increase since 2001 and 10% higher than the estimated stockpile before Port Arthur (**Figure II.3**). However, this does not translate into a higher rate of gun ownership in Australian society because that larger number of weapons is concentrated in fewer hands: in 2020, the number of licensed firearm owners was around 868,000, one third less than the estimated 1.2 million in 1996 (Alpers, Lovell, & Picard, 2022). Each owner now possesses around four guns on average, compared with three in 1996. With population growth, licensed gun owners now constitute 3.4% of the population, down from 6.5% in 1996. Despite the dramatic fall in gun ownership, Australia's sport-shooting community remains vibrant (Negin, Alpers et al., 2021), and groups such as farmers use firearms in much the same way as they did before the new laws were enacted.

---

<sup>19</sup> From 1996 to 2020, Australians imported 1,475,859 guns (Alpers & Picard, 2021).

## Firearm Regulation in Australia

*Figure II.3. Number of Registered Firearms in Australia*

These data show that reducing gun violence in Australia was not simply a matter of cutting the number of firearms. The weapons that were eliminated were the most dangerous kind; and the imported replacements have been less capable of rapid fire. In addition, the now larger civilian arsenal is contained within a smaller section of the population comprised of individuals who have undergone a much stricter vetting process than previously existed. Police forces in several states have set up dedicated gun crime task forces to pursue illegal firearms, as well as the criminals and the licensed gun owners who supply them (Johns, 2004; Ryan, 2018; NSW Police Force, 2022). Changes to policing – for example, surprise inspections of civilian firearm possession and arms dealerships – have encouraged new generations of officers to recognise the crime-fighting potential of toughened firearm legislation and to support its use (Sky News Australia, 2018; Pearson, 2019).

The legal reforms and buybacks have been accompanied by attitudinal change, driven by public and political determination. In the public consciousness of Australia, stringent gun control is now institutionalised. After decades of rejection by most states, uniform national gun owner licensing, firearm registration, and the removal of guns from situations of domestic violence and self-harm are now seen as basic norms (New Matilda, 2015; Essential Research, 2018). Politicians, mass media, and voters reliably voice alarm at attempts to weaken the regulation of firearms (see, e.g., Dingwall, 2016; Taylor, 2022). As recently as 2019, in a public opinion poll

## Firearm Regulation in Australia

following the Christchurch mosque mass shooting in New Zealand, 37% of respondents in Australia’s largest state thought Australia’s gun laws were too weak – a jump from 26% in 2018 (McGowan & Martin, 2019). Particularly in light of the mounting gun death epidemic in the United States, Australia’s 1996 reforms and their effects – precipitous declines in mass shootings, gun homicides, and gun suicides – are frequently cited as a source of national pride (see, e.g., Baird, 2013; Geelong Advertiser, 2022; Creighton, 2022). One brief letter to the Editor expressed a sentiment that is commonly voiced: ‘I have never voted conservative in my life, but I will always praise John Howard for his introduction of Australia’s gun laws. A legacy of which he should be rightly very proud’ (Douglas, 2022).

**Box 3: *The Limitations of Statistical Analysis when Examining the Effects of the National Firearms Agreement***

Several studies have used statistical analysis to ascertain whether Australia’s National Firearms Agreement was directly responsible for the reductions in mass shootings and firearm-related deaths outlined in this report (e.g., Leigh & Neill, 2010; Ramchand & Saunders, 2021; Baker & McPhedran, 2006; Lee & Suardi, 2008). Despite various complex regression methods, however, it is impossible to run a trial on the sort of sweeping real-world policy interventions involved in the NFA and subsequent reforms, as there is no control site or situation. Nonetheless, as Professor David Hemenway of Harvard University has noted, from a policy perspective, if the policymakers in 1996 had been told that the following 25 years would see such dramatic reductions in mass shootings and homicides, they undoubtedly would have considered their policy intervention a success (Unpublished peer review written in 2020 to the authors of a RAND Corporation research summary published the following year (Ramchand & Saunders, 2021)).

## 2. Policy Compliance

The many positive outcomes of the National Firearms Agreement have been achieved despite the agreement falling short of 100% compliance. At least five studies<sup>20</sup> have found that no Australian state or territory has at any stage fully complied with the 1996 and 2002 resolutions that collectively form the NFA (Council of Australian Governments, 2017). In important areas, state and territory legislation has been blocked or revised to dilute the effect of the NFA. Although two decades of political pressure from various interest groups have steadily reduced restrictions and undermined the NFA’s original intent, the core principles and restrictions remain largely intact (Alpers & Rossetti, 2017).

<sup>20</sup> Warner & Moller (1997); Rath & Griffith (1999); Warner & Sherwood (2006); Davies & Mouzos (2007); Alpers & Rossetti (2017).

### 3. Costs of Australia's Policy Settings

Economists Leigh and Neill have estimated the value and cost of the 1996–97 gun buyback program, using the leading estimate of the value of a life in Australia of AU\$2.5 million and assuming there was no offsetting increase in non-firearm deaths (Leigh & Neill, 2010). They calculated that the ongoing yearly preventive benefits of the buyback have an economic value of AU\$500 million (US\$391/CA\$468 million using 1997 exchange rates). As this amount is the same as the buyback cost in the first place, the program has repaid the original investment every year since (Leigh & Neill, 2010).

## III. Lessons from Australia and Other Countries

### 1. Why Regulate Firearms? The Public Health Approach

For many decades, injury by gunshot was seen almost exclusively as a 'crime problem', for which most proposed solutions were of the 'bottom of the cliff' variety – after-the-fact law enforcement and retribution (Zimring & Hawkins, 1997; Zimring, 1999). But to public health practitioners, bullets and firearms are the agents of harm, and both are amenable to standard injury prevention procedures. Instead of waiting until after damage is done, industrialised societies have developed a range of effective harm prevention measures for armed violence – just as they have for the tolls of automobile injury, tobacco-related disease, HIV/AIDS, smallpox, and many others (Hemenway, 2004).

On our roads, public health officials have deployed a holistic array of evidence-based public health measures to dramatically decrease the toll of death and injury by automobile (Hemenway & Lee, 2022; Sadat & George, 2019; CDC, 1994). Almost all parts of the world have embraced safer cars, safer roads, alcohol-restricting driving laws, traffic calming, and so on. Most importantly, however, automotive control is widely built on three pillars:

- The Person: License drivers
- The Object: Register vehicles
- The 'Right': Defined as a conditional privilege

The universal adoption of licensing and registration of vehicles since their advent did not lead to mass confiscation. Abusing the privilege of motorised mobility can result in loss of licence, yet cars remain symbols of masculinity, power, and freedom.

## Firearm Regulation in Australia

Public safety campaigns from road safety and tobacco harm reduction to HIV, smallpox, malaria, and Ebola have saved countless lives. The same is being done today with COVID-19. In each case, public health and legal communities have overcome the denial of self-interest groups, and the world followed that example (Kickbusch, Allen, & Franz, 2016; Bazell, Koh, & Bloom, 2022). Firearm policy responses can learn from the public health approaches taken by road traffic safety campaigners, smoking cessation advocates, and infectious disease control.

***Box 4: Risks and Benefits of a Gun in the Home***

Within gun control debates in Australia and elsewhere, a common argument is that keeping a firearm close to hand can provide a degree of safety. In summarising the available research on this contentious topic, one leading academic in the field of firearm injury prevention has concluded:

[T]he scientific studies suggest that the health risk of a gun in the home is greater than the benefit. There are no credible studies that indicate otherwise. The evidence is overwhelming that a gun in the home is a risk factor for completed suicide and that gun accidents are most likely to occur in homes with guns. There is compelling evidence that a gun in the home is a risk factor for intimidation and for killing women in their homes, and it appears that a gun in the home may more likely be used to threaten intimates than to protect against intruders. On the potential benefit side, there is no good evidence of a deterrent effect of firearms or that a gun in the home reduces the likelihood or severity of injury during an altercation or break-in (Hemenway, 2011).

Similarly, the authors of a recent study that followed 17.6 million Californians for up to twelve years concluded:

Although personal protection is a major motivation for purchasing firearms, existing studies suggest that people living in homes with firearms have higher risks for dying by homicide... Living with a handgun owner is associated with substantially elevated risk for dying by homicide. Women are disproportionately affected... Overall rates of homicide were more than twice as high among cohabitants of handgun owners than among cohabitants of nonowners... Among homicides occurring at home, cohabitants of owners had sevenfold higher rates of being fatally shot by a spouse or intimate partner (Studdert, Zhang et al., 2022).

**2. How Should Firearms Be Regulated? The Three Pillars of Prevention**

More than a century ago, countries ranging from Great Britain and Russia to Japan and China began to introduce or strengthen a wide range of legislation to control civilian possession of firearms. The most common reason given was to curb public shootings and civil unrest (Kopel, 1992). Adaptations of these laws have gradually propagated to more than 150 countries around the globe.<sup>21</sup> Today in almost all nations, three central tenets of gun control law are dominant:

<sup>21</sup> See the website of GunPolicy.org.

- The Person: License gun owners
- The Object: Register firearms
- The ‘Right’: Defined as a conditional privilege

As with the central pillars of driver licensing, motor vehicle registration, and road safety law as noted above, these three methods of firearm injury prevention, which will be examined more closely below, are interdependent. Together, they have become a *de facto* global standard (Alpers & Lovell, 2022d).

Since 1996, Australia’s national firearm policy has mandated the most comprehensive and holistic suite of legislation to implement these standards. The NFA did not prohibit or confiscate all guns, only the limited types shown to be most dangerous in mass killings (Australasian Police Ministers’ Council, 1996: 1). As with cars, the country now has more firearms than at any previous time (**Figure II.3**). As with cars, the masculinity, individual power, and freedom of gun owners remain unaffected.

#### *A. Pillar 1: Gun Owner Licensing*

Of 198 sovereign States,<sup>22</sup> 191 (96.46%) publish their legislation on gun ownership and possession (Alpers & Lovell, 2022b). Of these:

- 162 maintain a ‘complete’ licensing system for civilian gun owners (84.82%);
- 12 maintain partial licensing systems in which only certain categories of persons or firearms require a current gun owner licence (6.28%); and
- 16 States prohibit civilian firearm ownership (i.e., no licences issued) or otherwise do not maintain gun owner licensing systems (8.38%).

All 38 Member States of the Organisation for Economic Cooperation and Development (OECD) publish their legislation on gun owner licensing. Of these:

- 35 maintain a ‘complete’ national civilian gun owner licensing system (92.11%);
- 1 maintains a partial national licensing system in which only certain categories of persons or firearms require a licence to possess (2.63%); and
- 2 maintain no national licensing system for almost all gun owners (5.26%).

<sup>22</sup> In addition to the 193 Member States of the United Nations, we include both UN Observer States (Palestine and the Holy See), plus three additional States with seats at the UN: Kosovo, Cook Islands and Niue. Each is a sovereign nation with its own independent national firearm legislation.

## Firearm Regulation in Australia

*B. Pillar 2: Registration of Firearms*

Of 198 sovereign States, 186 (93.94%) publish their legislation on firearm registration (Alpers & Lovell, 2022a). Of these:

- 168 require that civilian firearms be registered in some capacity (90.32%); and
- 18 countries prohibit civilian firearm ownership (i.e., no guns to register) or otherwise do not require that civilian firearms be registered (9.68%).

All 38 Member States of the OECD publish their legislation on firearm registration. Of these:

- 37 States require that civilian firearms be registered in some capacity (97.37%); and
- 1 State does not require that civilian firearms be registered (2.63%).

Resistance to a firearm registration system often includes the claim that a national register is too difficult or expensive. Yet to control epidemics of bovine disease, the European Community registers every cow (European Commission, 2022). In India, 280 million consumers (80% of households) use liquefied petroleum gas (LPG) for cooking and heating (DownToEarth.org, 2021). To discourage illegal manufacture and to limit explosions, their individually registered LPG cylinders are made, refilled, and exchanged by three closely controlled national companies (John, 2013; Hindu Business Line, 2020; Special Correspondent, 2021). As with most vehicles – of which there are more than a billion on the world’s roads – licensing and registration of potentially hazardous articles reduce public health risks and make people individually accountable for misuse.

*C. Pillar 3: A ‘Right’ to Possess Firearms*

Alpers and Lovell (2022c) have found that of 198 sovereign States:

- 2 guarantee a Constitutional right that is not limited by statute law (1.01%);
- 4 provide conditional guarantees that are limited by statute law (2.02%); and
- 192 provide no explicit guarantee or right to possess firearms (96.97%).

All 38 Member States of the OECD publish legislation regarding a right to possess firearms. Of these:

- 1 guarantees a Constitutional right not limited by statute law (2.63%);
- 2 provide conditional guarantees that are limited by statute law (5.26%); and
- 35 provide no explicit guarantee of a right to possess firearms (92.11%).

According to Article 10 of the Constitution of the United Mexican States, citizens have the constitutional right to possess guns at home for security and self-defence, except for types of weapons that are prohibited or reserved for armed forces. The text notes that federal law determines the conditions and circumstances in which individuals will be authorised to carry guns. In Guatemala, Article 38 of the Constitution recognises the right to possess firearms for personal use at home, except for prohibited weapons. Carrying a gun is also recognised as a right but is subject to regulation. Despite these constitutional mentions, both countries have relatively strict gun laws – for example, requiring registration of all firearms. By contrast, in the United States, the ‘right to keep and bear arms’ in the Constitution has posed a greater political and legal obstacle to the adoption of strong gun laws.

In 2021, the Czech Republic amended its Constitutional Code to state that ‘the right to defend one’s own life or the life of another person with a weapon is guaranteed under the conditions laid down by law’, as provided for in art. 6(4) of the Charter of Fundamental Rights and Freedoms. However, legal scholars have noted that the provision is primarily symbolic and does not make it easier to qualify for a firearm licence (Vikarská, 2021).

A few countries characterise gun possession as a right in their firearm legislation, even if not in their constitutions. For example, in Switzerland, Article 3 of the Federal Law on Weapons, Accessories and Ammunition guarantees the right to acquire, possess, and carry weapons in compliance with the law. Until recently, the gun law in Honduras recognised the right to own, possess, and carry firearms in compliance with the law (Law for Control of Firearms, Ammunition, Explosives and Similar Items, Art. 4). However, 2019 saw a new law come into effect, aligning national firearm regulation with Honduras’ international obligations and dramatically modifying the underlying premise. The earlier mention of a right was replaced by a note in the Preamble that possession and use of firearms by civilians is generally permitted for protecting life and property. The new law requires proof of reason for a gun licence and cancellation of the licence if the reason ceases to apply as per Article 41 of the Honduras Law for Control of Firearms (2018). Significantly, one of the guiding principles is that provisions of the law are to be interpreted in a restrictive manner, the presumption being against the issuing of a licence, according to Article 4. No data are available yet to indicate whether this restrictive principle is being applied.

### 3. Other National Initiatives to Remove Firearms

Since 1990, dozens of countries have conducted weapon collection programmes in which at least 10,000 firearms were destroyed. These include Albania, Angola, Argentina, Australia, Bosnia and Herzegovina, Brazil, Bulgaria, Cambodia, Canada, China, Colombia, Congo (ROC), Croatia, El Salvador, France, Germany, Haiti, Kosovo, Liberia, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Panama, Romania, Russia, Serbia, Sierra Leone, South Africa, Uganda, United Kingdom, United States, Uruguay, and Venezuela (Karp, 2007; Karp, 2009; Florquin & Waszink, 2003). Some of these programmes were ‘buybacks’ in which owners were paid for their newly prohibited firearms. The more prominent of these are summarised below.

#### *A. United Kingdom*

Following the Hungerford mass shooting in August 1987, the United Kingdom banned semi-automatic centrefire rifles and some shotguns. After the Dunblane school shooting in March 1996, the United Kingdom further banned all handguns (pistols and revolvers) through the Firearms (Amendment) Act 1997 and the Firearms (Amendment) (No. 2) Act 1997. Owners were paid market rates for their firearms, parts, and accessories (Chapman, 2013). As of November 2000, the UK government had paid GB£90.2 million (US\$D146 million) in compensation for returned firearms (Faltas, McDonald, & Waszink, 2001). A further national amnesty in 2003 collected another 43,908 guns (Home Office, 2003). From 1996 to 2009, 226,000 firearms were destroyed (Karp, 2009).

The rate of firearm-related death in the United Kingdom has always been low, and since the 1996–97 gun bans, this key indicator has continued to trend steadily downwards (Alpers, Lovell & Pavesi, 2022). The same 25-year period saw two mass shootings,<sup>23</sup> one in Cumbria in 2010 and another near Plymouth in 2021. All four UK shooting massacres were committed by a licensed gun owner with legally held firearms (Alpers, 2015).

---

<sup>23</sup> In order to exclude far more common shootings between familiar persons (e.g., gang-related or domestic shootings), a mass shooting is defined here as five or more victims shot dead, not including the perpetrator (see Chapman, Alpers, & Jones, 2016).

*B. Brazil*

Brazil leads the world as the country with the highest number of firearm-related deaths (Malta et al., 2020). During the first term of President Lula da Silva in 2003, the Brazilian Congress passed a Disarmament Statute (L. 8.10826/03), which applied unprecedented restrictions on purchasing firearms, prohibited civilians from carrying them, introduced a firearm register, and prescribed a gun buyback to reduce the number of weapons in circulation. Between 2004 and 2005, the National Voluntary Firearms Handover campaign, led by non-governmental organisations, churches, and an army of volunteers, collected 459,855 firearms, or three per cent of the estimated private holdings in Brazil (Dreyfus, Nascimento, & Guede, 2008). In the first two phases of the campaign, the Ministry of Justice paid BRL\$32.7 million (US\$14 million) to purchase guns for destruction (Dreyfus, Nascimento, & Guede, 2008). Over a six-year period, the buyback program removed as many as 1.1 million firearms from circulation (Ferrazares, Sabia, & Anderson, 2021).

According to the Brazilian Justice Ministry, as a result of the voluntary weapon collection campaign and the ban on carrying guns imposed by the new law, there was an 8.1% reduction in the number of deaths by firearm in 2005 as compared to 2004. This was the first drop in more than a decade, and UNESCO calculated that the projected impact of the reduction was a 15% decrease in gun deaths, or more than 5,000 lives that would be saved (Bandeira & Bourgois, 2006). States that collected more firearms per capita saw higher reductions in firearm deaths (Malta et al., 2020). The buyback campaign in the state and city of Rio de Janeiro had significant effects on gun violence, with an 11% drop in the rate of firearm-related deaths (Dreyfus, Nascimento, & Guede, 2008). According to the Mapa da Violência and Instituto de Pesquisa Econômica Aplicada (IPEA), two research institutes in Brazil, the Disarmament Statute contributed to a sharp decline in gun-related homicides. Researchers there estimate that it may have saved as many as 160,000 lives between 2004 and 2012 (Muggah & Risso, 2019).

In 2018, as he campaigned successfully for the presidency of Brazil, Lula's successor Jair Bolsonaro promised to loosen gun laws. Since coming to power, his government has introduced more than 32 changes to make it easier for Brazilians to keep weapons at home; to halve the frequency of vetting gun owners by lengthening the validity of gun licences from five years to ten; to increase the number of guns allowed per person; and to loosen restrictions on ammunition and the ability to buy more powerful weapons. In 2020, police reported that the number of

privately owned firearms had doubled since 2017. Experts predict ‘a lot of consequences for many years’ (Watson, 2021).

### *C. Argentina*

After a fifteen-year-old boy killed three classmates at a school near Buenos Aires, in December 2006 the Government of Argentina established the National Programme for the Voluntary Surrender of Firearms (PEVAF, or ‘the Disarmament Law’). Between July 2007 and December 2008, the programme collected 107,761 firearms for destruction (Ronconi, Lenis, & Schargrodsky, 2011). An innovative aspect of the buyback was that it classified gun violence as a critical public health problem. Overall, from 2007 to 2015, more than 300,000 privately owned and state-owned firearms were destroyed (Ware, 2020), representing between 14% and 20% of the estimated total stock of weapons in the country. The PEVAF programme has since been biannually renewed by Congress according to Ley 27529/2019 (Argentina). In 2017 alone, the ongoing amnesty reported the surrender and destruction of 11,000 firearms (Argentina, 2018).

### *D. New Zealand*

In the early 1980s, due to the inability of police and the reluctance of gun owners to keep accurate records, Police National Headquarters acknowledged that the national firearm register had broken down (Alpers, 1997; Forsyth, 1985; Kopel, 1992). Although shotguns had been exempt from registration since 1930, ‘as the task was a burden for the police’ (McCallum, 1982: 3), the Arms Act 1983 (NZ) still required that every licensed gun owner be held personally responsible for each rifle or handgun in their possession. During the same years in which desktop computers proliferated, NZ Police maintained a million individual records in two separate manual paper-card filing systems at seventeen locations around the country (New Zealand Police, 1984). Two thirds of the licence certificates were found to contain errors, mainly incorrect addresses for gun owners (Alpers, 1996).

Despite its inaccuracies, the system was still being used. In 1982, a NZ Police survey found that of the officers who had consulted the country’s firearm register for a criminal offence, 67% found that it assisted in the apprehension of an offender (McCallum, 1982). Three quarters of these officers had used the register successfully to help catch criminals more than three times each, solving cases from illegal gun sales to armed robbery. The survey concluded, ‘The [firearm

registration] index was of great assistance in locating offenders’, and ‘despite its shortcomings, the present registration index is widely used and is of benefit to the police’ (McCallum, 1982). Of the 172 police officers polled, 161 (94%) wanted to keep the existing system of firearm registration (McCallum, 1982 Appendix R; 6:5.3).

A few months later, New Zealand scrapped its register of rifles, leaving 97% of privately owned firearms no longer registered to their owners. In announcing the new system of owner-licensing only, a police media release declared, ‘A major piece of good news with the introduction of the new Arms Act is that there is to be no limit on numbers of firearms anyone may gather as his personal collection’ (McMillan, 1984). Handguns, restricted weapons, and (from 1992) Military Style Semi-Automatic long guns (MSSAs) remained registered, subject to stringent storage requirements and attentive policing. The result of these restrictions on the firearms considered to be most dangerous is that crime with registered firearms in New Zealand is rare (Alpers & Morgan, 1995; Bird, 1973). However, those firearms that are subject to minimal restrictions have proliferated and become the most frequently misused. Common sporting long guns – both full-length and sawn-off – are the weapons most used in gun homicide and in non-fatal misuse of guns, including firearm-related domestic violence (Gardiner, Norton, & Alpers, 1996).

In 2019, an Australian visitor who had been denied such weapons in his own country exploited New Zealand’s lack of regulation to gain a firearm licence and to buy and convert an entry-level rifle into an ‘assault rifle’. On 15 March, while live-streaming his massacre on the Internet, this licensed gun owner fatally shot 51 people and injured another 40 at two Christchurch mosques (Christchurch Mosque Shootings, 2022). Less than a month later on 10 April, MPs voted 119–1 to ban, then to buy back centrefire semi-automatic firearms, their accessories, and parts (Faidell & Wright, 2019). The Arms Amendment Act 2019, which received royal assent the following day, also prohibited ownership of some pump-action shotguns, other self-loading long guns, and most large-capacity ammunition magazines. Semi-automatic .22 rimfire rifles with a capacity of ten rounds or less, plus five-shot-or-less shotguns were exempted (New Zealand Police, 2019). In a five-month amnesty from prosecution and gun buyback, which ended on 20 December 2019, owners were paid market price. A total of 57,716 firearms and 205,209 magazines and parts were collected for destruction, at a cost of NZ\$103.8 million (US\$65/CA\$86million) (New Zealand Police, 2020). In the absence of evidence due to

decades of data decay, it is estimated that between 55,000 and 240,000 prohibited firearms might remain to be found and destroyed (New Zealand Controller & Auditor General, 2020).

In June 2020, the Arms Act was significantly amended. Commencing in June 2023, every firearm will once again be registered to each owner. The aim is to populate a fresh, computerised firearm registry with new data as gun owners renew their licences or transfer firearms to other owners over a five-year period from June 2023 to June 2028, or later (New Zealand Police, 2022).

#### **4. Evaluation of Buybacks**

Only the Australian and Brazilian gun buybacks have been evaluated in peer-reviewed studies. Long-term analyses of the British and Argentinian programmes seem non-existent, and the tightening of gun laws in New Zealand is too recent to show clear effects. Due to confounding factors, it is commonly not possible to establish the cause of any post-buyback changes in broader categories, for example in gun homicide, overall homicide, or violent crime as a whole.

#### **5. Firearms in Canada from an International Comparative Perspective**

These data visualisations compare Canada to other countries in the following categories, in both English and French:

- [Rate of Civilian Firearm Possession per 100 Population](#)
- [Proportion of Households with Firearms](#)
- [Rate of Licensed Firearm Owners per 100 Population](#)
- [Rate of Registered Firearms per 100 Population](#)
- [Rate of All Gun Deaths per 100,000 People](#)
- [Rate of Gun Homicide per 100,000 People](#)
- [Rate of Gun Suicide per 100,000 People](#)

Hundreds more comparisons can be charted between Canada and other individual countries using the GunPolicy.org interactive visualization tool for that country (Alpers, Picard & Pavesi, 2022a).

#### **IV. Conclusions**

The Australian experience with firearm regulation provides important lessons for other jurisdictions with high rates of gun violence. This example demonstrates that taking a public health approach to firearm injury prevention by reducing access, strengthening regulation, and engaging the community can reduce gun deaths. Along with emerging evidence in New Zealand after the Christchurch mosque massacre, it also shows that a mass shooting incident can be a galvanising event for a country to improve policies on a wide scale. Australia's sweeping policy change used a substantial amount of the political capital of the relatively new, right-leaning Prime Minister. The support of many conservatives was crucial and was secured by overwhelming pro-firearm regulation opinion polls and media pressure. Gun policy reforms were supported by all major political parties, whereas conservative parties in many other countries staunchly oppose such reforms. The success of firearm regulation has since become a source of pride for many Australians.

Mass shootings account for a small proportion of firearm-related deaths, but they tend to receive a substantial amount of media coverage and can focus the attention of the public and politicians on gun violence more broadly. Although preventing gun deaths is essential, focusing on deaths obscures another tragic reality of firearm violence. Beyond the people killed with firearms, a larger number are injured and have life-changing pain, disability, and psychological distress, which leads to substantial expenses related to medical care, mental health care, and rehabilitation. Australian firearm policy now focuses more than it did in the mid-1990s on domestic and family violence, which often involves additional victims besides intimate partners, including children.

While firearm injury prevention has been a notable public health success in Australia, the field of firearm injury prevention is remarkably under-researched and poorly understood. This public policy gap undermines gun control successes. Data on firearms and firearm violence in Australia is patchy, inconsistent, and incomplete. Most studies are based only on deaths and ignore injuries completely. Eight jurisdictions store widely variable data, often in obsolete and inaccurate firearm registers. In order to support the policy response, strong data collection and data use, as well as data-sharing across jurisdictions, are required. This can allow the monitoring of trends and impacts as well as the analysis of the impact of policy changes over time.

The Australian experience also highlights the need for a multi-pronged approach to firearm violence prevention. Australia’s policy response was not only about the high-profile buyback but built on a range of policy actions and regulations that have held up over time despite consistent attempts to dilute them.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

### INTRODUCTION

Events like mass shootings and other mass casualty incidents provide unique challenges about how best to support not only those who have been impacted, but also the affected community or communities. Despite the growing number of such events,<sup>1</sup> however, there is no recognized set of best practices to guide this process. As a result, decisions about what resources to provide and to whom often fall to the organizations and governmental entities in charge of the recovery efforts. This can be a daunting task, especially without knowing where to begin. There is much to be learned about the road to recovery and resiliency from similar tragedies that have occurred prior. Although each impacted individual and community is unique, these lessons can provide an important foundation from which to begin developing a comprehensive support plan.

This report draws upon original research conducted to better understand the needs of those affected by mass shootings. Beginning in 2017, this report's author conducted interviews with survivors and community members from different communities that experienced mass shootings in the United States.<sup>2</sup> Upon receiving approval from the university's institutional review board,<sup>3</sup> participants were recruited using snowball sampling after the research call was shared by a survivor support organization, The Rebels Project. A total of 37 interviews were conducted via Skype and phone between October 2017 and May 2018. A second round of interviews was conducted in December 2021 with one additional survivor as well as four service providers from affected communities for this report. Research findings from the first round of interviews based on a subset of the participants (individuals from the Columbine community) were published by this author in 2021.<sup>4</sup>

This report represents a synthesis of this author's study with existing scholarly research and other literature (e.g., governmental resources) to better understand the needs of those most impacted and of communities in the wake of a mass casualty event.<sup>5</sup> When examined as an aggregate "survivor network," these experiences can aid the Mass Casualty Commission in making meaningful recommendations that can be used by government and communities to support those who were impacted by the April 2020 tragedy in Nova Scotia.

### WHO ARE THE "SURVIVORS"? CONSIDERING THE IMPACT OF A MASS VIOLENCE EVENT

To date, there is no single way in which the term "survivor" is conceptualized in the context of mass casualty incidents.<sup>6</sup> Oftentimes, this term is a label that has been self-applied by individuals who have been impacted by the tragedy or scholars studying the effects of the event. As a result, research examining the effects of these events on survivors has varied in who has been included in this context. One study examining the impact of the 1991 mass shooting in Killeen, Texas, for example, included anyone present at the restaurant during the shooting (customers, employees, responding law enforcement), as well as off-duty restaurant employees and individuals residing in neighboring apartment buildings.<sup>7</sup> A separate study involving survivors of the 1999 Columbine High School tragedy encompassed immediate and extended family members of persons killed in the attack, individuals who were present in the school during the shooting (both injured and uninjured), and those with a connection to someone in the building (such as the parent of a student).<sup>8</sup> Still another study assessing social support among survivors of the 2007 mass shooting at Virginia Tech utilized a broader sample of students enrolled the fall semester after the tragedy, not all of whom necessarily were on campus on the day of the shooting.<sup>9</sup>

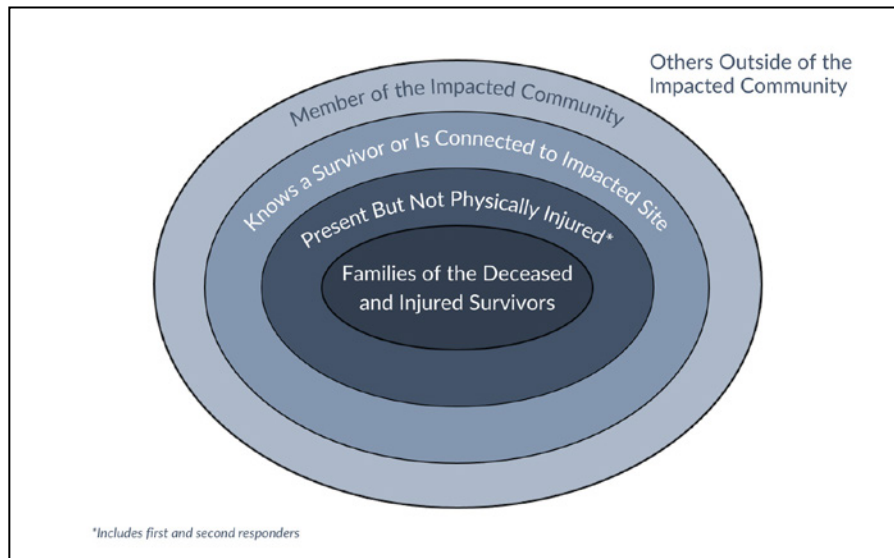

SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

Regardless of how the term “survivor” is applied, there are countless individuals who may, in some manner, be impacted by a mass casualty event. Thus, it is imperative to consider how these events encompass different groups or layers of survivors, and an earthquake can provide a useful metaphor for conceptualizing this impact (see **Figure 1**).

At the epicenter are the people who were physically injured in the attack and the immediate families of those who were killed; much in the way of resources and services typically are prioritized around these individuals. Moving outward from the epicenter are those individuals who were present at the scene of the event but were not physically injured, although some may have been more directly exposed to stressful stimuli (e.g., seeing the perpetrator(s) or victims, hearing gunshots) than others. This layer also may include individuals in the immediate vicinity of the site (e.g., neighboring residences or businesses), as well as first responders (police officers, firefighters, and emergency medical technicians) and hospital personnel who treated persons injured in the event. These first two layers represent those who are considered to be *directly* impacted by the event.

It also is important to recognize those who may be indirectly affected or who may have experienced vicarious victimization. This can include individuals who have a direct connection to the event site but were not present as well as those who know someone who was directly impacted (such as immediate and extended family or friends of those at the epicenter). As the impact continues to spread outward, it can engulf the broader community where the event took place. Here, individuals may experience

**Figure 1**  
The Layers of Impact for Survivors of Mass Casualty Events

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

trauma symptomology due to “trigger events,” such as seeing a heavy first responder presence (lights, sirens, helicopters).<sup>10</sup> Even more broadly, there may be others who are impacted, including prosecutors, medical examiners, funeral directors, support service providers (e.g., victims’ advocates, crisis counselors, and others who are sometimes referred to as “second responders”), community partners (including faith-based leaders), former residents of the community who feel a sense of loss, and survivors of previous tragedies who may be retraumatized by the event’s occurrence. In sum, the impact of mass casualty events is both immeasurable and widespread, and no two individuals will move through the trauma recovery process in the same way.

### THE PHASES OF DISASTER

Although individuals who are impacted by a mass casualty event may move through the recovery process differently, the way in which such a disaster and corresponding psychological responses to it unfold is largely consistent across cases. The United States’ Substance Abuse and Mental Health Services Administration (SAMHSA) conceptualizes disasters across six different and progressive phases,<sup>11</sup> as illustrated in **Figure 2**, from before the event occurs through recovery (reconstruction). Each of these phases presents unique challenges both for impacted communities and individuals as well as for those who are seeking to support them. The remainder of this section summarizes these phases as described by SAMSHA in their training manual,<sup>12</sup> while also incorporating additional resources to help further understand what occurs during each stage of the process.

**Figure 2**  
Phases of Disaster

Note. Adapted from model developed by Leonard Zunin and Diane Myers, as cited by DeWolfe (2000).

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

The first phase is the *pre-disaster* period and is when warnings or threats of the impending event may appear. There is considerable variability in how much advance warning a community receives depending on the type of disaster that occurs. For mass shootings specifically, research has found that the perpetrators of these events engage in considerable planning rather than just “snapping.”<sup>13</sup> Often, however, the accompanying warning signs (e.g., leakage, shifts in behavior) are not associated with an impending attack until after it has occurred,<sup>14</sup> leaving the community with little or no time to prepare or prevent.

The second phase is the *impact* phase, which coincides with the occurrence of the event. The length of this phase also varies based on the type of disaster. For mass shootings, the average incident is over in approximately five minutes.<sup>15</sup> This interval, however, is sensitive to several factors, including law enforcement response time and whether the perpetrator is mobile and attacks multiple sites rather than a single location. Importantly, it is not only those who are at the location where the event is occurring who are impacted. For example, during mass shootings, individuals who are offsite but have family members at the affected location(s) will experience anxiety until they are reunified with their loved one(s). Individuals also may experience or exhibit panic, confusion, and disbelief while being focused on both self and family preservation.

The third phase, the *heroic* phase, begins in the immediate aftermath of the event. In the context of a mass shooting or other mass casualty event, this is when the threat (perpetrator) is neutralized and the imminent danger to community safety is terminated. At this time, efforts shift to providing medical care to injured individuals and evacuating the impacted site. As a general practice, families of deceased victims will be notified by law enforcement with the help of a victim advocate, though it may take hours until positive identifications can be made (see below). Survivors who do not need medical care typically are transported off-site for family reunification, at which time witness interviews with law enforcement also may occur. Although there is seemingly a lot of activity during the heroic phase, the actual output of such productivity is typically low. In other words, while affected individuals may engage in tasks to keep themselves busy (e.g., going to the grocery store, attending routine appointments), they

**Challenges for Family Notifications**

Through this author’s research, family members of individuals killed have recounted difficulties related to the death notification process. One parent whose child was killed at an elementary school, for example, described how she and others waited at a reunification center for information, though none was provided until more than five hours after the shooting. By the time that they were finally notified that their loved ones had been killed, they were the only remaining individuals at the location. Other families in similar situations indicated that rather than waiting at one single location, they spent the time driving all over the city to check hospitals when they were not getting any information. In some instances, death notifications were not made until more than 24 hours after the attack occurred, leaving families without any information about their loved ones.<sup>16</sup> To avoid exacerbating grief and trauma associated with death notifications, it is important that all potential survivors be provided with regular informational updates, even if it is to let them know that there is no new information. Providing them with a time of when they can expect another update (e.g., 30 minutes) also may be helpful.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

may have difficulty completing them as normal. Altruism is present both among individuals and the community, and outsiders with similar shared experiences also may reach out to lend support. This phase often is short-lived, lasting just a few days at most.

The fourth phase is known as the *honeymoon* period, a time when community cohesion and group bonding are particularly high as individuals unite over their shared experiences of the tragedy.<sup>17</sup> This may include participating in memorials or attending funerals for those who were killed in the event. Support among community members is both given and received, which can reinforce this cohesion, and these individuals also may experience optimism about the possibility of rebuilding. During this phase, more formalized resources from the government, such as disaster mental health (e.g., crisis counseling through agencies like the American Red Cross) and community-based family assistance centers, are made available. The honeymoon phase begins about a week after the event and can last for up to a few months before survivors become fatigued and discouraged from dealing with the fallout of the event.

This gives way to the fifth phase – *disillusionment*, which occurs as the community becomes further removed temporally from the disaster. Assistance that was provided in the immediate aftermath from both the government and volunteer groups will begin to pull out. This can lead survivors to feel abandoned and resentful as they come to realize the challenges of rebuilding after the tragedy and the limits of their own resources. At the same time, the broader community will have begun to return to “business as usual,” leaving those most impacted to feel alienated in some ways.<sup>18</sup> This divide may be furthered as monetary resources are doled out unequally, with priority given to those most impacted, thereby breeding resentment among others who perceive their impact to be similar.<sup>19</sup> Consequently, the cohesion built during the honeymoon phase may be disrupted by increasing divisiveness and hostility. As stress and other pressures (e.g., financial loss, family problems, bureaucratic processes) increase, individuals may turn to less effective (maladaptive) coping mechanisms, including drugs and alcohol, anger, or isolation. The disillusionment phase can last for months or even years as individuals work through their grief. Such progress, however, may be impeded by trigger events (e.g., additional mass casualty events that spark reminders of an individual’s own tragedy), year marks,<sup>20</sup> or other setbacks. Communities also may experience added tragedies either directly or indirectly related to the mass shooting. For example, in the respective year following both Columbine and the Marjory Stoneman Douglas High School shooting in 2018, two survivors of each tragedy died by suicide, which undoubtedly further impacted each community still reeling from the initial events.<sup>21</sup>

The sixth and final phase of a disaster is the *reconstruction* phase. Reaching this phase is the ultimate goal for a community following a disaster like a mass shooting or other mass casualty event. It typically begins around the one-year mark and can continue for years after. During this time, survivors continue to grieve their losses from the tragedy, but they also begin the process of rebuilding, both physically and emotionally, and adjusting to the “new normal”<sup>22</sup> of life after the event. Although they are on the road to recovery, survivors still may experience setbacks at year marks or as the result of other trigger events, though they continue to build the necessary skills (e.g., resilience) for healthy coping.

While this model can provide an overview of how survivors and communities *may* react and respond to a disaster like a mass shooting in its aftermath, it is important to remember that each situation is unique. Not only may differently impacted individuals and communities move through these phases

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

**Further Considerations for Differential Impacts of Individuals and Groups**

There are other considerations that must be accounted for when understanding how individuals and groups may be impacted differently by mass casualty events. Specifically, consideration must be given to individuals and groups who are historically marginalized or stigmatized and how their responses and needs may differ as a result. Importantly, even when individuals belong to the same impacted group, they may be affected differently.

Indigenous communities in the United States typically are afforded tribal sovereignty, which means that their land and, by extension, their residents are beyond the reach of the government, media, and public.<sup>23</sup> After a mass casualty event, the reservation may close its borders and turn inwards to manage the tragedy, as was the case in 2005 after the Red Lake High School shooting in Red Lake, Minnesota. Many resources that normally would be afforded to communities, such as financial support, either were not provided or were denied by the Red Lake community, which further exacerbated the challenges as the community was and still is economically depressed, with more than one third of its residents living in poverty.<sup>24</sup> The community also struggled in respect to mental health and addiction before the shooting, which subsequently exacerbated these issues and increased their prevalence. Aside from the cultural differences related to mental health, many of the individuals who were impacted by the shooting also lacked basic resources like transportation to get to service appointments. Consequently, even more than 20 years later, individuals who were impacted by the shooting still struggle with their trauma, with continued addiction and suicides plaguing the community.<sup>25</sup>

Gender identity also must be considered when assessing the impacts of mass shootings, such as the 2016 attack at Pulse nightclub in Orlando, Florida. Research has found that not only were members of the LGBTQ+ community concerned about the safety of themselves and their peers, but they felt less protected in places once considered safe havens (gay and lesbian bars).<sup>26</sup> Moreover, these differences in experiences and responses can be more pronounced among certain subgroups<sup>27</sup> or when there is an intersection of marginalization, such as for LGBTQ+ persons of colour,<sup>28</sup> as was the case after Pulse. This can amplify emotions as LGBTQ+ individuals may internalize violence differently (and in different ways based on other facets of their identity),<sup>29</sup> which can adversely affect their coping processes.

Also compounding the effects of mass shootings is when such attacks are hate crimes targeted towards specific racial or religious groups. This was the case in Charleston, South Carolina in 2015, where a self-radicalized White supremacist targeted the city's oldest historically Black church, killing nine of its parishioners during a Bible study class.<sup>30</sup> Similarly, in 2018, eleven worshippers were killed in Squirrel Hill (Pittsburgh), Pennsylvania in an anti-Semitic attack on a Jewish temple.<sup>31</sup> In each, it is possible that the targeted nature of the attack created complexities for the trauma after the shootings, though existing community cohesion may have balanced this.

Understanding the complexities of such events is critical to providing trauma support through a **culturally sensitive lens** that addresses the challenges of the communities while allowing group characteristics to help guide healing and recovery. It is important to note, however, that attacks against marginalized individuals and communities may have even further reaching consequences. Other individuals from such groups outside of the affected area may identify with the victims, leading to potentially adverse reactions on a broader scale.<sup>32</sup>

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

at varying rates, but such progression may not always be linear or sequential. Phases of the disaster may be skipped or, in some cases, impacted individuals may retreat to earlier points in the process. How individuals and communities progress along this path is influenced by several factors, including the magnitude of the event and how exposed each person was to it. Individual factors, such as their previous life experiences, preexisting psychopathology or psychological distress, coping styles, family and social support, and financial resources, also play a role in how someone progresses through the phases, as do other extrinsic factors. These challenges are described in more detail in the next section.

### **CHALLENGES FOR SURVIVORS AND COMMUNITIES IN THE AFTERMATH OF MASS CASUALTY EVENTS**

There are numerous challenges in the aftermath of a mass shooting or similar event that can affect responses to the tragedy, particularly in the phases (heroic and honeymoon) just after it occurs. These can include such factors as the media coverage and corresponding public attention as well as either an overabundance or lack of resources (or both). Understanding the challenges posed by each of these sources for survivors is critical to identifying the ways in which to best support impacted individuals and communities.

#### **The Media**

When news of a mass shooting breaks, the media often rush to the scene to cover the event minute-by-minute, detail-by-detail. In some cases, their arrival occurs while the event or initial response is still in progress and can continue for days or even weeks. Reporters often incorporate interviews with impacted individuals into the coverage. This includes immediately after the event has occurred, as survivors are being extricated from the impacted scene and still trying to make sense of what they just experienced. Survivors of mass shootings interviewed by this author have recounted instances when the media camped out on their residential streets or in front of their homes, called their phones (despite them having unlisted numbers), and went so far as to impersonate grief counselors to make connections. In addition to seeking out survivors in the minutes and hours after the attack, the media usually cover its aftermath, including memorials, funerals, and other important events (e.g., injured survivors being released from the hospital, impacted sites reopening, legal proceedings). As a result of the pervasive media attention, survivors have likened this experience to “grieving in a fishbowl,” as described by one individual during an interview with this author.

When the media retreat from the impacted community, sometimes as quickly as they arrived, their departure can leave survivors and the community as a whole feeling abandoned. It is not uncommon for survivors to struggle with feeling as though others have moved on and forgotten about their tragedy while they are unable to. Such feelings are not only related to the presence or lack thereof of the media. Attention from the broader public often is high in the immediate aftermath of a mass shooting, with people offering thoughts and prayers as well as resources. After a short period, however, these too diminish. As this attention may be perceived as a form of social support, its absence can have a negative impact on survivors, who may perceive it as another loss that compounds their initial impact and creates an added obstacle for their recovery journey.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

**Recommendations for Reducing the Impact of the Media***(Adapted in part from the Toolkit for Response for Advocates in Colorado)<sup>33</sup>*

- During the event and immediate aftermath, work with law enforcement to create media staging points away from the scene or locations where survivors are gathering.
- Assign a Public Information Officer (PIO) to each family or injured survivor.
- Notify family/survivor PIOs and victim advocates of information to be covered at press conferences so they can prepare the impacted individuals they are working with.
- Assign a gatekeeper to field media requests and connect them with persons who have expressed an interest or willingness to provide public interviews.
- Incorporate these same practices for other instances where impacted individuals will be congregated together, such as at funerals, when returning to the event site, and year mark commemorations, as well as for any legal proceedings stemming from the event.
- Provide resources to impacted individuals about healthy media consumption practices (e.g., limiting the amount of media consumed each day; seeking out verified information from trusted and credible sources).
- Encourage the media to adopt a NoNotoriety<sup>34</sup> policy when covering the event in any context, including at annual observance ceremonies. No Notoriety challenges the media to reduce the attention given to a perpetrator in the coverage of a crime, including limiting the use of their name (instead referring to them as “the perpetrator”) and image, avoiding prominent placement of the story, and avoiding publishing their manifestos.

**Donations**

Mass shootings and similar events also bring about challenges related to resources. Immediately after the tragedy, well-intentioned individuals who want to support the impacted community and individuals may offer help by donating money or goods (from teddy bears to concert tickets). This can create a separate set of challenges beyond just how best to distribute them. For instance, the community already will be taxed in terms of existing resources and may not have the infrastructure in place to deal with the influx of donations not only from the local community but potentially from across the nation or internationally. This can strain the postal system not only for the impacted community but also for those that surround it, as mail may be incorrectly addressed without a central location where items can be sent. It also can add stress to already strained volunteers who will need to figure out where to store the donations and how to distribute them as well as the practical logistics of doing so.<sup>35</sup>

Similarly, people may seek to offer monetary donations to impacted individuals and the community but not know precisely how to do that, particularly if the community has not yet had the opportunity to

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

### **Recommendations for Managing Financial Donations**

*(Adapted in part from the Toolkit for Response for Advocates in Colorado)<sup>36</sup>*

- Identify an existing agency (e.g., a nonprofit organization) or financial institution that is able and willing to accept private donations on behalf of individuals impacted by the event. (If possible, establish such relationships before an incident occurs.)
- Consider establishing two separate funds: one specifically for funds donated to help the victims and one that can be used to provide services both for the victims and for the community.
- Determine who is eligible to receive these funds and clearly communicate this information to both donors and potential recipients.
- Advertise the fund(s) through the media and other community outlets, emphasizing that these are the “official” central funds for the crisis to discourage donations to potential scammers.
- Establish various channels through which potential donors can contribute through (e.g., PayPal, Venmo, GoFundMe, and/or similar crowdfunding sites, websites with credit card portal).
- Ensure there are mechanisms in place for timely disbursement, as survivors often will need assistance soon after the event to help with medical costs, lost wages, temporary lodging (if the event occurred at their residence), and/or replacement items.
- Maintain accurate records of all donations and corresponding disbursements.

In lieu of financial contributions, individuals and organizations also may wish to donate goods and services, such as “no-cost” mental health services, providing crisis counseling, and services for special populations (e.g., individuals with disabilities or those needing interpreters or other assistance). Like monetary donations, such contributions require a centralized agency not only to oversee the receipt and distribution of the goods and services, but also to answer calls from potential contributors, to screen and vet providers seeking to offer their services, and to store the goods.

establish a centralized fund. This may be further complicated by crowdfunding campaigns (e.g., GoFundMe) set up by families or friends of impacted individuals. Survivors interviewed by this report’s author also have noted that, in some instances, multiple accounts may be set up on their behalf, which leads to more steps needing to be taken to access any funding received. Money received into a general community fund presents a separate set of challenges regarding how it will be disbursed and who will be eligible to receive it.

### **THE PSYCHOSOCIAL IMPACTS OF MASS SHOOTINGS**

As noted above, the impact of mass shootings is widespread, encompassing individuals who are both directly and indirectly affected. These events have been found to lead to high rates of psychological

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

distress.<sup>37</sup> Mental health outcomes related to mass shootings include but certainly are not limited to posttraumatic stress disorder (PTSD),<sup>38</sup> posttraumatic stress symptoms (PTSS),<sup>39</sup> major depression,<sup>40</sup> anxiety,<sup>41</sup> acute stress disorder,<sup>42</sup> mood disorders,<sup>43</sup> and alcohol-related conditions.<sup>44</sup> Prevalence rates for these disorders vary across the research, but the most chronic and severe dysfunction (e.g., PTSD) is not as common among mass shooting survivors as has been assumed. Research has, however, found that mass shooting survivors are very likely to experience PTSS, affecting upwards of 95 percent of individuals evaluated.<sup>45</sup> Many survivors also struggle with grief,<sup>46</sup> worry,<sup>47</sup> and dissociation.<sup>48</sup> Moreover, surviving these types of events can affect individuals' fear of victimization,<sup>49</sup> perceived risk of harm,<sup>50</sup> and emotional and behavioral well-being.<sup>51</sup>

Traumatic experiences can manifest themselves through a range of different responses.<sup>52</sup> Mass shooting survivors may experience intrusions (seeing, smelling, hearing, tasting, or feeling something that causes the individual to relive the event), flashbacks, or nightmares. These reactions may be triggered by either internal or external cues at any point. Some survivors, for example, have expressed to this author having sensitivity to sounds that resemble gunshots, such as fireworks or cars backfiring, or sounds that remind them of the response to the shooting (e.g., emergency sirens, helicopters). They may have trouble falling or staying asleep, and also may experience hypervigilance or other forms of arousal that can manifest through startle responses, irritability, new or exaggerated fears, or difficulty concentrating on a task or retaining information. They may adopt avoidant strategies to try to cope with their trauma, both emotionally (shutting down, refusing to talk about their experience) or behaviorally (e.g., staying away from the scene of the event). Some impacted individuals interviewed by this author describe experiencing "survivor guilt," whereby they blame themselves for what occurred or how they did or did not respond to the event. They may question why they survived the shooting when others did not. In some instances, individuals struggling with survivor guilt may feel as though they do not deserve to live, which could lead to them taking measures to end their own lives.<sup>53</sup>

The emotions experienced by survivors of mass shootings have been found to be influenced by a variety of different factors. As noted, individuals may be impacted either directly or indirectly, and research has found that the level of exposure to the shooting can affect trauma symptomology.<sup>54</sup> Incident exposure can be measured as the physical proximity to the attack or how much the individual saw or heard during it. Knowing or being close to someone who was killed or injured in the attack, as well as not being able to contact friends or loved ones during or after the attack, also are markers of incident exposure that can adversely affect individuals.<sup>55</sup> Research has provided some evidence that there is a positive association between exposure level and the length of time that more pronounced symptomology is present, with more extreme and direct exposure to traumatic stimuli corresponding to longer periods of psychological reactions like PTSS for mass shooting survivors. Still, even those with greater levels of indirect exposure, including consuming news media about the shooting or having informal conversations about it with family and friends, can exhibit trauma-related psychological reactions.<sup>56</sup>

Beyond individuals' experiences with the mass shooting, there are other factors that can affect their reactions to it. Individuals with previous psychological distress or trauma exposure have been found to be at an increased risk for posttraumatic symptomology and difficulty coping.<sup>57</sup> Social resources (e.g., social support, solidarity) have been found to be inversely correlated with post-incident mental health outcomes, such that fewer social resources lead to a higher likelihood of adverse reactions in survivors. There also is evidence that sociodemographic factors can affect mental health outcomes. These

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

include but are not limited to gender, race and ethnicity, age, marital status, education, family history of mental illness, and socioeconomic disadvantage (e.g., income levels and employment status). Research has found, for instance, that women often exhibit greater posttraumatic growth than men.<sup>58</sup> Similarly, one study found that the prevalence of PTSD among exposed children following an elementary school shooting was 91 percent,<sup>59</sup> whereas other studies of adults have reported prevalence levels between 5 and 64 percent.<sup>60</sup> In sum, even a single mass shooting event can affect survivors differently based on a variety of factors, such that no two individuals respond the same.

It is important to recognize that the trauma-related impacts of events like mass shootings are dynamic rather than static. Research has found that impacted individuals are more likely to report such symptomology in the honeymoon phase right after the event (several weeks to one month).<sup>61</sup> As time passes and the individuals become more removed from the event, the elevated levels of symptomology can decline. Notably, however, not all mass shooting survivors exhibit trauma symptomology along the same timetable relative both to the onset and to the corresponding decline. For some individuals, trauma reactions may be delayed; the person also may choose not to acknowledge their presence or be able to make the connection between their feelings and the event. In one example described to this report's author, a Columbine survivor who was a student on the day of the shooting noted that although he entered counseling almost immediately after the event, it was not until eight years later that he disclosed the impact to his therapist, allowing for the connection to be made and underlying issues to be addressed.<sup>62</sup> Given such variability, it is important to identify the needs of survivors of mass shootings, especially from their perspective, and understand how these can change over time. This information is vital for planning efforts for community leaders, support providers, and others tasked with assisting survivors in working towards recovery and resiliency.

### WHAT RESOURCES DO SURVIVORS NEED?

Given the disparity in how different individuals are impacted by a mass shooting, there inevitably is variability in the types of resources and supports that they need to help them along their posttraumatic journey. Physical needs may be perceived as the easiest to provide as they relate to those injuries that can be seen. Individuals wounded in a mass shooting, for example, will require medical treatment and may need physical therapy afterwards. The level of the severity of injuries will dictate how much treatment and resources are needed to help the individual heal (e.g., identifying if they can be treated and immediately released or if they will require longer hospital stays; if their injuries are temporary or permanent, such as a spinal cord injury that leaves the impacted individual permanently paralyzed). Often, however, the number of people who sustain physical injuries account for the smallest proportion of impacted individuals.<sup>63</sup>

Instead, individuals impacted by mass casualty events are far more likely to sustain injuries that cannot be seen. These "invisible" injuries create the need for emotional and psychological supports, including psychological first aid, not only in the immediate aftermath of a mass shooting but also for years after. Given the widespread number of individuals who are impacted by such events, it can mean that an untold number of people with both direct and indirect victimization may need such support. In fact, individuals who are present at an impacted location during the event but are not physically injured are a critically overlooked group in this respect because their trauma is not visible. Supports for emotional and psychological needs may take the form of both formal and informal resources.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

**What are Recovery and Resiliency, and How Do They Differ?**

Oftentimes, the aftermath of traumatic events like a mass shooting is viewed through the lens of **recovery**.<sup>64</sup> Immediately after the event occurs, individuals may exhibit elevated trauma symptomology and distress. After a period of heightened arousal, these symptoms can decrease gradually. At some point, the impacted individual returns to a state of pre-event functioning or something that closely resembles it. This period of disruption can last for months or even years, as the amount of time that it takes the individual to return to “normal” depends on the severity of the trauma and how exposed or impacted that person was.<sup>65</sup>

When it comes to mass shootings and similar traumatic events, **resiliency** is conceptually distinct from recovery and often is a more realistic goal for impacted individuals. Resilience has been described as:

the ability of adults in otherwise normal circumstances who are exposed to an isolated and potentially highly disruptive event such as the death of a close relation or a violent or life-threatening situation to maintain relatively stable, healthy levels of psychological and physical functioning, as well as the capacity for generative experiences and positive emotions.<sup>66</sup>

Individuals who have developed resilience after trauma are better able to meet the demands of their everyday lives while managing their stress well. Although they may still experience trauma-related stressors, the impact of these is milder, less prolonged, and typically does not interfere with cognitive functioning as it would for people who have failed to build resiliency. Most individuals tend to exhibit resiliency after trauma,<sup>67</sup> but they also may either underestimate or not be aware of how resilient they are.

Both recovery and resiliency are the product of individuals’ coping capabilities. Coping has been defined as “constantly changing cognitive and behavioral efforts to manage specific external and/or internal demands that are appraised as taxing or exceeding the resources of the person.”<sup>68</sup> Individuals who are impacted by a traumatic event and consequently experience stress or other symptomology must devise different strategies or plans to respond to these challenges, and how they are able to do so is dependent on a number of factors, including social support and prior traumatic experiences.<sup>69</sup>

Research on the topic has identified four different types of coping strategies that may be employed by survivors of mass shootings:<sup>70</sup>

- **Problem-focused coping:** involves changing or removing the source of stress by either doing something about the problem, coming up with ways to resolve the underlying issues, or making sense of it through religion or spirituality
- **Emotion-focused coping:** involves managing negative feelings and stress through social support (e.g., seeking out advice or empathy, venting about frustrations)
- **Avoidance:** involves finding ways not to deal with the stressor (e.g., distraction, denial, restraint, or evading the issue by using drugs or alcohol)
- **Acceptance:** involves coming to terms with the stressor and working to deal with it

Of these types, avoidant coping has been most linked with prolonged trauma symptomology.<sup>71</sup> Notably, however, research has also found that employing multiple strategies predicts greater resilience following a trauma<sup>72</sup> and that the use of different strategies may change over time.<sup>73</sup>

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

**Formal Resources: Counseling and Therapy**

Formal psychological supports most commonly take the form of counseling and therapy resources. Initially after a mass casualty event occurs (during the heroic and honeymoon phases), mental health support can be provided through short-term crisis counseling and psychological first aid.<sup>74</sup> This involves helping survivors understand what they just experienced and the reactions that follow, providing emotional support and teaching coping strategies to help reduce stress and other posttraumatic reactions, and connecting them to other individuals and agencies that can provide additional resources and more sustained support.<sup>75</sup> While broad support, such as teaching stress management and mindfulness techniques, can be provided to impacted individuals throughout the community, triaging and risk assessment may be used to identify those who are in need of immediate attention and connect them with the appropriate services.<sup>76</sup> Early intervention efforts should focus on promoting a sense of safety, calm, community and self-efficacy, connectedness, and hope.<sup>77</sup> Having trained counselors available in the immediate period after a mass casualty event can help to mitigate the risks of posttraumatic symptoms later in the recovery process.<sup>78</sup> Still, it is important to understand that some impacted individuals will reject mental health-related services initially and possibly even for years to come. Even for those individuals who do utilize crisis support, it may not be viewed as helpful, particularly among those most in distress.<sup>79</sup>

As more time passes and the initial impacts (e.g., shock, denial) wear off, more traditional forms of counseling and psychotherapy will be needed to treat the trauma and underlying issues (during the disillusionment through reconstruction phases). Although PTSS prevalence rates typically are higher in the immediate aftermath of the event, failing to treat the source of trauma can increase the potential for relapses, comorbidities with other outcomes (e.g., alcohol or drug addictions), and later diagnoses of PTSD.<sup>80</sup> Longer term, however, significant and ongoing counseling may not be needed as survivors continue to progress along their trauma journeys. Some individuals impacted by mass casualty events even may exhibit posttraumatic growth<sup>81</sup> or report positive changes resulting from their traumatic experiences,<sup>82</sup> though others may require long-term or more complex treatment, particularly if they did not benefit from the supports offered at the immediate aftermath. Notably, this also may be when an increasing number of first and second responders seek trauma supports as they may have delayed seeking treatment or their symptoms may have gone unrecognized during the earlier phases (heroic and honeymoon) of the aftermath.<sup>83</sup>

It is important that the types of treatments that are offered to or sought out by survivors are both trauma-informed and empirically supported. Although research has yet to systematically evaluate the therapy methods that are most helpful for mass shooting survivors or that were the most successful in treating their trauma responses, the American Psychological Association (APA) does provide recommendations about interventions used with PTSD that also may be used to support these individuals.<sup>84</sup> These include cognitive behavioral therapy (CBT), cognitive processing therapy (CPT), cognitive therapy (CT), prolonged exposure therapy (PE), brief eclectic psychotherapy (BEP), eye movement desensitization and reprocessing (EMDR), and narrative exposure therapy (NET). Among these, CBT, CPT, CT, and PE receive the strongest recommendations from the APA, although mass shooting survivors interviewed by this report's author have highlighted EMDR as being especially helpful, with one survivor calling it a "game changer."<sup>85</sup> Although not included in the APA's guidelines, researchers have found that for first and second responders, including medical workers and crisis counselors, critical incident

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

stress debriefing (CISD) can be used to treat posttraumatic symptomology, including depression and anxiety, during the immediate aftermath of the disaster.<sup>86</sup> Mindfulness-based psychotherapies, such as Acceptance and Commitment Therapy (ACT) and mindfulness-based cognitive therapy (MBCT), also can provide benefits to these groups relative to reducing the impacts of both direct and vicarious trauma.<sup>87</sup> Similarly, beyond the APA's recommended interventions, there may be other types of therapy that can benefit survivors. Some communities, for examples, have incorporated equine therapy<sup>88</sup> and creative arts therapy<sup>89</sup> into their offerings.

Just as survivors will vary in their timelines for when they seek out mental health support, they also will differ in respect to the types of supports that are most effective. As such, those tasked with spearheading support efforts for the impacted community can work to identify service providers trained in each of these different types of intervention, carefully screen and vet them for their ability to respond to the current crisis,<sup>90</sup> and distribute a master list of approved providers to those affected and in need of services. It also is important to consider the impact that a mass casualty event will have on community mental health providers due to a surge in referrals for impacted individuals, which can significantly disrupt more routine operations.<sup>91</sup> Identifying multiple individuals and agencies that can provide each

#### Differentiating Between Recommended PTSD Interventions

Through their *Clinical Practice Guideline for the Treatment of PTSD* resource,<sup>92</sup> the APA describes the aforementioned treatments as follow:

- **Cognitive Behavioral Therapy (CBT):** Emphasizes changing feelings, thoughts, and behaviors by addressing underlying problems and symptoms that impact functioning.
- **Cognitive Processing Therapy (CPT):** Teaches individuals to challenge and modify negative or unhelpful beliefs to improve functioning. CPT is a form of CBT.
- **Cognitive Therapy (CT):** Focuses on changing negative evaluations and memories of trauma to stop them from interfering with an individual's behaviors and thoughts.
- **Prolonged Exposure Therapy (PE):** Teaches individuals to confront their trauma-related thoughts, feelings, and memories through a gradual approach to lessen their impact.
- **Brief Eclectic Psychotherapy (BEP):** Combines CBT with psychodynamics to help an individual change their adverse feelings (e.g., shame, guilt).
- **Eye Movement Desensitization and Reprocessing (EMDR) Therapy:** Combines bilateral stimulation (eye movements) with a brief focus on the traumatic event to reduce the vividness of associated emotions.
- **Narrative Exposure Therapy (NET):** Teaches the affected individual to ground their traumatic event in their broader life narrative.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

different type of services is key to having enough resources available for all who are affected.

### **Informal Resources: Social Support**

One of the most important predictors of posttraumatic growth and a reduction of trauma-related mental health concerns is positive social support,<sup>93</sup> or the amount of support, both emotional and instrumental, received by a person from others within their environment.<sup>94</sup> Its presence can help protect against the onset of trauma symptomology, including PTSD. Positive social support also can act as a buffer against the deleterious effects of mental health problems that do set in, either by decreasing the severity of symptoms or minimizing the amount of time it takes the individual to go into remission (meaning that the heightened symptomology is no longer being experienced on a consistent basis). It enables impacted individuals to be able to manage their trauma and recovery more successfully by promoting resilience, posttraumatic growth, and successful coping strategies. When positive social support is absent, however, survivors may be more likely not only to develop adverse trauma-related mental health outcomes but also to experience more chronic bouts of symptoms.<sup>95</sup>

Importantly, not all social support – even when well-intentioned – is positive.<sup>96</sup> Whether such efforts are viewed as positive is dependent on whether the receiver believes they need support, whether the help matches the individual's needs, and/or whether the efforts are requested or unsolicited.<sup>97</sup> Research has found that for bereaved individuals more broadly, efforts such as creating opportunities for those affected to express their feelings and be involved in activities often are viewed as positive, as is having support providers express concern for them.<sup>98</sup> Conversely, efforts may be viewed as negative when they are perceived to minimize the impacted individual's feelings, discourage open communication or grieving, or hurry recovery, offers of unsolicited advice, forced attempts at cheerfulness, and attempts to associate with their trauma (e.g., saying "I know how you feel" without having the same experience) also have been poorly received. In such cases, these attempts at social support may adversely affect not only the receiver but also the provider.<sup>99</sup>

Losing someone to homicide has been described as one of the most severe traumatic experiences that a person can have, due in part to how rare it is.<sup>100</sup> As a result, these losses can lead to the stigmatization and even isolation of those who have been impacted. Even intact social support systems may be weakened over time as non-affected individuals struggle to understand the magnitude of the loss for survivors. Put simply, the lack of shared experiences between homicide survivors and their support networks can have significant consequences that can magnify the impact of the loss, particularly related to mental health outcomes. Given the violent and random nature of mass shootings, it is reasonable to conclude that the occurrence of a mass casualty event can exacerbate these challenges for affected individuals.

While the lack of shared experience can be a significant barrier to posttraumatic growth, one of the most valuable social supports identified in the research is connections with other individuals who have experienced a similar trauma.<sup>101</sup> These "similar others" are uniquely positioned to provide positive social support because they can validate an impacted individual's emotional responses as "normal" (relative to the extremity of the situation) having been through a comparable trauma themselves. Having come out on the other side of tragedy successfully, similar others become role models for survivors, who may observe and imitate what they believe to be successful techniques for managing their trauma.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

ma.<sup>102</sup> They also can provide different types of assistance, including advice and encouragement, while being less likely to push the survivor towards quick recovery, to minimize their concerns, or to dismiss their feelings and experiences entirely.

Like homicide survivors, individuals who are impacted by mass shootings also have identified connection with similar others as the most beneficial resource they have during their recovery.<sup>103</sup> As described to this report's author by one survivor, "Just to be around people who have been through the same trauma makes you feel normal for a second. It validates your feelings." Not only does this connectedness help to reinforce that the survivor did not go through the event alone, but it also fosters solidarity and cohesion that can help them navigate their trauma long after the honeymoon phase of the disaster has passed. Moreover, it can act as a buffer against the potential negative effects of outsiders, whether it be the media or even family and friends who either intentionally or unintentionally attempt to deny the survivor their experience.

Importantly, research from this report's author finds that social support tends to be viewed as positive not only when it comes from another survivor but when that provider has experienced the shooting in the same way (e.g., both the receiver and provider lost a loved one in the tragedy, they both were in the same space within the affected location during the incident). This holds true not only for the most affected individuals but for any impacted person. For example, one individual who lost their child in a mass shooting in a school noted in their interview with this report's author:

"[We] had 12 other families who had lost somebody, and we became close with them. Although it was this horrendous tragedy, [it] was extremely important – I think in terms of getting through all this and seeing how they dealt with it. Walking into this group of people and [you] knew you didn't have to explain how you felt. They were there and they knew, and you could just start talking. They knew it was okay to laugh sometimes."

At the same time, another individual, who was in the same school but was not physically injured during the shooting, highlighted during their interview that "The only time that I felt comfortable was when I was surrounded by people that I was in the room with," referencing the nearly 60 other students they were locked down with. Although these two individuals were impacted differently by the same tragedy, they still both sought connections with others who more analogously shared their experience.

One way to promote the development and sustainment of this type of social support is to utilize support groups. Although largely unstudied in the context of mass shootings, research has documented the success of support groups for homicide survivors.<sup>104</sup> These groups allow individuals to bond with others who have a similar experience, to have their feelings validated, and to make sense of their loss. At the same time, survivors can build mutually beneficial relationships with others, and they may seek out those who share more similar experiences to their own. The ability to find a dedicated place among others who understand what they are going through can help to stabilize the effects of the trauma. It also can help individuals to expand their social support networks in meaningful ways. In the context of those impacted by mass casualty events, creating support groups based on the way individuals are impacted can help to further connections with similar others and promote posttraumatic growth.

Through this author's research with survivors, the concept of community also has been identified as

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

**Leveraging Existing Resources to Build Community**

Cultivating opportunities for impacted individuals to connect with similar others can happen not only within the affected community but also by leveraging existing survivor support networks. One of the most prominent is The Rebels Project (TRP), an organization founded by survivors of Columbine after the mass shooting at the movie theater in neighboring Aurora, Colorado in 2012. The group began with about 100 members but has since grown to approximately 1,400 members representing more than 100 communities impacted by mass casualty events, including from Canada.<sup>105</sup>

Although members of the group are spread out geographically, the fact that TRP exists primarily online (through the group's website and social media platforms) helps to cultivate a surrogate sense of community. It allows for the fostering of social solidarity across both space and time, while creating a forum where individuals can share the lessons that they learned along their trauma recovery journey. This is particularly important as members are all inherently at different stages of this process, whether they are Columbine survivors who are more than 20 years out from their initial trauma or survivors of a mass casualty event within the past few months.

While research, including this author's, finds that virtual networks such as this are helpful for survivors of mass shootings,<sup>106</sup> this type of community cannot completely replace in-person connections. As such, TRP hosts annual in-person survivor gatherings, as well as other events throughout the year, to bring impacted individuals together in a setting that focuses on mindfulness and healing.

Survivors of numerous mass shootings have highlighted the importance of their membership in TRP as it helps them to have a place where they can go when they need support. During the course of this author's research, one survivor noted:

I wish I had someone who understood. ... I found The Rebel's Projects [and] I feel like having them there was what I wanted so I had people who understood, who talked to me, and who knew what I went through or what I was going through.

At the same time, survivors also highlight the importance of TRP not only for finding support for themselves but also for their ability to support other impacted individuals in return, which also can help to promote their own posttraumatic growth, as noted by one individual interviewed by this report's author:

It has completely changed my life. I'm in the spot now where I'm able to help other people that have been involved in things like this in their life. I'm in a different place than they are. We can help them where they are now because we've been there.

Support providers can help to foster opportunities for connection between these survivors and members of TRP. This may occur in several different ways. First, events, such as speaking engagements, may be organized that bring survivors from other tragedies to the impacted community or communities. This may involve bringing in a panel of survivors who have been affected in various ways (thereby accounting for the different layers of impact to reflect the variability within the community) and holding open community events, or it may be beneficial to arrange individual sessions based on impact level so that individuals can spend more time one-on-one or in smaller groups with those survivors who have the most similar experiences. Second, a grant program may be established to assist survivors with attending in-person gatherings with The Rebels Project via their annual retreat or other initiatives.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

being vital to understanding the shared experiences of mass shooting survivors, and it may have both positive and negative effects. In this sense, community is defined not only geographically (referring to a group of people living in the same place) or socially (e.g., a school or religious group), but also as a more abstract sense of fellowship or belonging with others who have a shared experience. Survivors have noted that when the community is close-knit prior to a mass tragedy occurring, it can facilitate the recovery process by helping to get things back to “normal” (or, as noted, the “new normal”) more quickly. Community partners, including other residents, can work alongside those most affected to not only rebuild the physical location(s) but also provide emotional support. At the same time, if those most affected need some type of resource to facilitate that process but are unable to procure it, there are other forms of support beyond the community that can potentially step in and assist.

Conversely, community may be perceived as having a negative effect on the recovery process when there is strife among members. As noted, even within a geographic community that is impacted by a mass casualty event, individuals will be affected – and at times prioritized both formally and informally – differently, often with the greatest focus on those most affected (families of the deceased and injured survivors). This can foster tension among survivors, who perceive other impacted individuals from the broader community as not understanding their experiences or being treated differently. Such tension can have adverse effects on trauma recovery.

The loss of community, often as the result of leaving the geographic area associated with the original trauma, also can present challenges for impacted individuals. Rather than being surrounded by others who, albeit to varying extents, also experienced the traumatic event, impacted individuals who relocate out of the community may struggle to connect with others in their new location.<sup>107</sup> The inability to form meaningful relationships with individuals who can relate to or understand their trauma can create a sense of social isolation, which can further impede the recovery process. As such, it is important to foster opportunities to help impacted individuals build new or expand additional social and community support structures.

### Other Resource Needs

To provide for both the physical and emotional/psychological needs of individuals impacted by mass shootings and other mass casualty events, a third form of support is required: financial resources. This type of support is needed for a host of different needs for survivors, including, but not limited to, subsidizing or completely covering the costs associated with medical care (both short- and long-term), burial assistance, lost wages, and temporary or permanent housing (if the event causes individuals to be displaced). Financial support also may be needed to assist with covering the cost of counseling and therapy resources, including insurance copays. Further, financial support may be needed to help restore or rebuild the location where the event occurred.<sup>108</sup>

Regarding financial resources, there are two key sets of considerations in planning how to support survivors and communities impacted by mass casualty events. The first set involves deciding who is eligible to receive financial support and how these resources will be distributed. Undoubtedly, individuals will have varying needs based on the manner or degree to which they were impacted. As such, for the purposes of providing resources, it may be necessary to define up front (either before a tragedy occurs or immediately after when resource assistance is activated) who will be considered a primary,

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

secondary, or even tertiary victim.<sup>109</sup> In terms of distributing resources, it must be decided how this will occur – whether through assessments of individuals’ applications on a case-by-case basis, set amounts of money based on the level of impact, or designated formulae that account for a variety of factors.<sup>110</sup> Other decisions will need to be made regarding who is responsible for overseeing the distribution process, how that individual or committee will be appointed, and the formula for resource allocation (if used). Once established, this same process also may assist with dividing donated goods and services.

The second set of considerations must account for the long-term needs of individuals and communities. In the United States, for example, funding through the national Office for Victims of Crime (OVC) is made available for up to three years (maximum) after the initial impact of the event.<sup>111</sup> As noted, however, in the immediate aftermath and even in the first few years following a mass casualty event, it is possible that survivors are either unwilling to accept resources or do not realize that they need them. For some, by the time that they are able or willing to utilize these supports, the resources have expired, meaning that their needs can potentially remain unfulfilled. One Columbine survivor interviewed by this report’s author, for example, noted that it was not until eight years after the shooting that he realized he needed to seek help. Even those survivors who do seek out more immediate assistance still may need resources later, such as counseling following other mass casualty events or other community-based traumas. As such, it is important that those who are tasked with leading the support efforts engage in planning for a longer period and coordinate the necessary resources to be able to do so, including money.<sup>112</sup> Conducting ongoing needs assessments at specific intervals (e.g., every three to five years) beyond the initial evaluation can be beneficial in coordinating or rearranging efforts for the upcoming period. Such assessments typically are conducted by administrators at victims’ services agencies in collaboration with community agencies, academic institutions, consultants, or others skilled in such evaluations.<sup>113</sup>

### **ADDITIONAL AVENUES FOR SUPPORTING INDIVIDUALS AND COMMUNITIES AFTER MASS SHOOTINGS**

#### **Memorials and Annual Remembrance Events**

There are other types of social support efforts that have been found to promote resiliency and reduce the traumatic impact among mass shooting survivors.<sup>114</sup> Such efforts include community-based rituals and events that take place in the aftermath of mass shootings (during the honeymoon period). Immediately following the event, temporary memorials may appear either at the impacted site or elsewhere in the community where people can leave flowers, teddy bears, signs, and other tokens.<sup>115</sup> Candlelight vigils often occur,<sup>116</sup> and there may be other public events, such as community marches and even funerals, that provide opportunities for impacted individuals to gather to share in their grief.<sup>117</sup>

Both planned and unplanned rituals such as these can have a significant effect on survivors of mass casualty events, particularly when they are struggling to make sense of what just happened. One study following a mass casualty event found that 70 percent of people felt more connected with others in the community in the immediate aftermath,<sup>118</sup> likely due to such rituals. The unity fostered by participating in these community-based events can improve feelings of belongingness that serve to promote well-being, recovery, and solidarity, all which can promote more positive coping mechanisms.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

It is not uncommon that these rituals will continue long after the initial tragedy and transition from spontaneous to more permanent efforts. The candlelight vigils held in the days after the mass casualty event, for instance, often become annual observance ceremonies held at each year mark (during the phase of reconstruction) to honor the individuals killed and injured in the tragedy as well as the broader community. Like the earlier rituals, annual observances serve to bring people together in solidarity to share in their collective grief while promoting belongingness and well-being, which can buffer any potential trauma-related symptomology stemming from the year mark and the recalling of events. It is important, however, that when such observances are held, that they involve input from those impacted and that any event plans are reviewed for trauma sensitivity.<sup>119</sup>

Communities also may choose to establish a permanent memorial to commemorate the event and the people impacted by it.<sup>120</sup> These sites can provide centralized places for impacted individuals to grieve as well as for outsiders to pay their respects, and they may host the annual observance ceremonies. Permanent memorials can take a considerable amount of time to plan, as well as construct, because there are a lot of decisions to be made. Input should be collected from those who are most impacted as well as from the broader community to ensure that the permanent memorial is reflective of those who it is dedicated to. Multiple design concepts usually are solicited, and members of the community may be given an open period during which they can review the concepts and provide comment to the planning committee.

While the process can be lengthy, the opportunity for survivors (particularly those who are most impacted) to assist in the planning can help further promote well-being and positive coping by giving them a creative outlet and a way to ensure that their loved one's memory is honored. Families of Columbine victims interviewed by this report's author, for example, have noted the benefits received from working with the other families to build the school's new memorial library. Although not specifically a community memorial (e.g., being offsite), the process of working to raise financial support, assisting with planning the design of the space, and seeing it through to opening was found to be a helpful way to channel their grief. Selecting the site for the permanent memorial also is important and can have unanticipated benefits. Establishing the memorial offsite or some distance away from the impacted location(s) can serve to provide some space between those who are most affected and individuals who may come to the space to mourn.<sup>121</sup> Similarly, impacted individuals may prefer a location away from the site of the original tragedy as grieving there could be triggering.

### Resiliency Centers

Another opportunity to provide support to survivors and the broader community after a mass casualty event is to establish a resiliency center. Resiliency centers focus on promoting physical and emotional wellness among all impacted individuals, from the most affected to the broader community, without the clinicalized aspects of more traditional forms of counseling. Instead, resiliency centers offer a range of services, including support groups, therapy groups (including for bereavement or secondary trauma), exercise classes, activities, healing therapies (e.g., yoga, massage, meditation), and trauma education.<sup>122</sup> They often are staffed by a collaborative team of trauma-informed practitioners and service providers from different disciplines and specializations.<sup>123</sup> The centers also combine existing programs with emerging resources to create a therapeutic community.<sup>124</sup>

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

In the context of mass shootings specifically, resiliency centers typically develop out of the reunification and family assistance centers that are established immediately after the tragedy. For those earlier centers, the goal is to provide short-term support and an information clearing house. Resiliency centers, on the other hand, are focused on providing a longer-term community-based space where impacted individuals can connect with one another while utilizing free services focused on wellness. The first known resiliency center established after a mass shooting was in Aurora, Colorado following the movie theater shooting in 2012 (though the center did not actually open until July 2013, one year after the tragedy). Since then, similar centers have been established after the mass shootings in Orlando, Florida (2016), Las Vegas, Nevada (2017), Parkland, Florida (2018), Santa Fe, Texas (2018), Pittsburgh, Pennsylvania (2018), Thousand Oaks, California (2018), Virginia Beach, Virginia (2019), and El Paso, Texas (2019). Like the center in Aurora, many of these centers opened approximately one year after the mass casualty event, as time was needed to establish a long-term planning committee, secure a location, hire the necessary staff, and build the infrastructure for the center to operate. Nearly all are still presently open and operating as of the time of this report, except for Aurora, which closed in 2019 after six years of service (citing an increase of resilience-enhancing programs in the community).<sup>125</sup>

As with other aspects of support for mass shooting survivors discussed throughout this report, there is no set of guidelines or best practices available for how to establish and operate a resiliency center.<sup>126</sup> Stakeholders wishing to establish a similar resource can, however, draw from the experiences of those who have already begun navigating this process.<sup>127</sup> In speaking to the staff of several resiliency centers and community partner agencies, the author of this report found that they believe their clients are satisfied with their services and benefit from having a range of options. In many ways, the centers pride themselves on having something for everyone. This includes holding meetings with the families of victims and providing information updates (e.g., about forthcoming court proceedings), which can help ensure that they are the first to know and not caught off guard.

When establishing a resiliency center, it is important to consider existing organizations within the community that can help. These organizations also may be tasked with staffing and operating the center, and in some instances may be the initial or primary funder. As noted, in the United States, affected communities can apply for funding through OVC, which is part of the Department of Justice, under its Antiterrorism and Emergency Assistance Program (AEAP).<sup>128</sup> These grants, however, can take a considerable amount of time (18 months or more) to be awarded and disbursed, meaning that communities seeking to set up a resiliency center or provide other services must have alternative seed funding.

Another challenge of the AEAP is that funding can only be used to support select individuals rather than anyone who is impacted, meaning that the government ultimately defines victimhood in a way that limits who is eligible for support. These individuals typically include primary (families of the deceased, injured survivors, witnesses, and first responders) and some secondary victims. It can omit members of the broader community who also may be impacted by the mass casualty event and would benefit from such services, which resiliency centers have noted creates obstacles to helping all who have been affected. Having a community organization leading the efforts to establish and maintain the resiliency center can help to address this challenge by leveraging their own resources and existing partnerships. There also may be opportunities for members of the community to help underwrite the costs of supporting the broader community, including providing resources to those individuals who are not covered under AEAP funding. In Parkland, for example, a local businessperson and philanthropist

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

established a nonprofit organization within two months of the shooting. The nonprofit, Parkland Cares, serves as a funding “warehouse,” accepting donations from community members and then issuing grants to local service providers, including the resiliency center. Although direct funding to impacted individuals is not available, the grants offered by the organization indirectly underwrite services to a broader segment of the community.<sup>129</sup>

A third challenge of the AEAP is how long funding is available. For mass casualty events involving a perpetrator who survives, grant funding is available for up to three years; when the perpetrator dies in the attack, the funding is limited to 18 months. Many impacted individuals, as noted, may not seek services for years after the mass casualty event, which means that the government funding may no longer be available and they may not be able to access the necessary support.<sup>130</sup> Having an organization that can continue to provide services after the government funding has expired is crucial not only for individuals but for the broader community in terms of maintaining resilience long-term.

Beyond funding considerations, it is important to identify who will lead the resiliency center as its director. The first step to making this determination is crafting a job description that aligns with the mission and goals of the center itself. This will then guide the search and subsequent selection. Choosing the right person is important, as the director wears many hats, from public information officer to manager to even janitor at times. The most important role of this individual, however, is to help filter through the different ideas and perspectives that inevitably come up as the center is being developed.

Once up and running, it is critical to make the community aware of the center, its services, and who is eligible to use them. This can be done through local media (e.g., television, newspapers) and social media. A key to the success of a resiliency center, however, is not to wait for the impacted individuals to come to the location, but instead to meet them where they are. Several resiliency center directors interviewed by this report’s author have indicated that it is very important to be out among the community, attending events (e.g., religious services, farmer’s markets) and passing out informational material (flyers, business cards), and generally being present. Choosing a location for the center that is in a higher traffic area also can help to increase awareness of the center and may encourage walk-ins, while having a phone app can help expand accessibility to different services and can make signing up for them easier.

Additionally, it is important to recognize that there is no set menu of services for all resiliency centers. Flexibility and adaptability are key, as all options tried may not be successful. If the center is considering trying out a therapy and a cost-benefit analysis suggests that the risk is low-stakes, then moving forward with it is a good thing. If it ends up not working out, it easily can be phased out of the offerings. Adopting this approach also will help the center to be flexible as the needs of the community and the center’s clients can change over time. There will be some services, however, that prove to be staples based on the clients’ needs and providing them consistently will be key. When determining what services will be offered, it is important to also consider how they will be branded and marketed. One resiliency center’s assistant director interviewed by this report’s author noted the challenge of labeling services as “therapy” given the community’s bias against the term. By being rebranded as “wellness” support, however, they were better received, even though they were delivered with a therapeutic focus.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

Finally, it is important to recognize that there is no set period of time that the resiliency center should be open. Ultimately, this will be dependent on the community. Some communities may want the center to close after several years to remove the reminder of the mass casualty event, while others may come to see it as a staple of the community and want it to remain. To help guide such decisions, the center's director can conduct follow-up needs assessments,<sup>131</sup> either using surveys or focus groups, with clients as well as service providers throughout the community.

### **CONCLUSION: A ROADMAP FORWARD**

The impacts of mass casualty events are widespread and long-lasting as both individuals and communities travel the complex path of trauma. Although many will travel this path, their journeys will not all be the same, which can present challenges for those who are tasked with supporting them. Understanding these challenges from the onset is critical to the success of support efforts, which must not only be tailored to the needs of those who are impacted but also be flexible as time passes.

Among the most important considerations for support efforts is the breadth of those who are impacted. Unsurprisingly, efforts often are focused on those who are most affected by the tragedy and therefore need considerable support. Underestimating how many people are affected and ultimately need support, however, can lead to chronic problems, not only for those individuals but for the broader community. As such, effective support efforts must account for this bigger footprint and aim to make resources available and accessible to all who need them. Establishing a community resiliency center is one such way to accomplish this goal. Such a center can provide both improved access to resources and a range of service to meet the varying needs of all who are impacted.

At the same time, it is critical to understand that trauma and the recovery from it do not occur according to a specific timetable. Too often, resources are gone before those who need them are ready to take advantage of them. Trauma recovery is a marathon rather than a sprint, and those tasked with providing support must be prepared to do so for the long run. This can be a complicated balancing act, given that much in the way of trauma symptomology presents itself early after the tragedy, yet the ability for individuals to effectively seek help and manage it will not come until later. Thus, planning for the future is critical, though it is important to not be overly focused on the long term as this can cause the more immediate needs of impacted individuals and the broader community to be overlooked. Leveraging resources from both within the impacted community and beyond, including existing survivor support networks (e.g., The Rebels Project), can help ensure a sustainable model for the future while enabling the focus to remain on what is needed in the present.

Finally, it is critical to be both present and consistent. Not only will keeping the lines of communication open help support providers to know what is needed from them, but impacted individuals also will feel as though their voices are being heard and their needs are being met. This can be accomplished both formally, such as through community forums, and informally, by having service providers out within the community. At a time when it may feel as though nothing is normal or safe, the consistent presence of those who care can be an invaluable resource for those individuals and communities impacted by mass casualty events.

20 The term “year mark” has been noted (informally to this report’s author) to be preferred by survivors of mass shootings compared to the term “anniversary,” as the latter conjures up the idea of a celebration rather than a commemoration of a tragedy.

21 Suicides by survivors occur not only in the year after the initial tragedy. In the three months following the one-year mark of Parkland, two survivors of other mass shootings also took their own lives: the father of a victim of the Sandy Hook Elementary School attack (7 years post-tragedy) and a Columbine survivor who had been shot in the library (20 years post-tragedy).

22 Survivors of mass shootings often describe the aftermath of their tragedy as the “new normal” as they recognize the profound and seemingly permanent impact of the event on themselves and their community.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

Consequently, they feel that they must essentially re-learn how to live in a world that is fundamentally different than before the event occurred. The term “new normal” was highlighted in Schildkraut et al. (2021). See note 4.

Another term that mass shooting survivors also often incorporate into descriptions of their impact, including through interviews conducted by this report’s author, is being members of “the club that nobody wants to be a part of,” highlighting their unique experience shared by few people while emphasizing their lack of control or choice they had in being affected.

L., Grills-Taquechel, A. E., Axsom, D., Bye, K., & Buck, K. S. (2012). Prior sexual trauma and adjustment following the Virginia Tech campus shootings: Examination of the mediating role of schemas and social support. *Psychological Trauma: Theory, Research, Practice, and Policy*, 4(6), 578-586. <https://doi.org/10.1037/a0025270>

58 Variation in post-traumatic growth based on gender has been found related to mass shootings. See Palus, S. R., Fang, S. S., & Prawitz, A. D. (2012). Forward, together forward: Coping strategies of students following the 2008 mass shooting at Northern Illinois University. *Traumatology*, 18(4), 13-26. <https://doi.org/10.1177/1534765612437381>. This mirrors findings related to the broader public (beyond mass shootings) as well. See, generally, Vishnevsky, T., Cann, A., Calhoun, L. G., Tedeschi, R. G., & Demakis, G. J. (2010). Gender differences in self-reported post-traumatic growth: A meta-analysis. *Psychology of Women Quarterly*, 34(1), 110-120. <https://doi.org/10.1111/j.1471-6402.2009.01546.x>

59 Schwarz, E. D., & Kowalski, J. M. (1991). Posttraumatic stress disorder after a school shooting: Effects of symptom threshold selection and diagnosis by DSM-III, DSM-III—R, or proposed DSM-IV. *The American Journal of Psychiatry*, 148(5), 592-597. <https://doi.org/10.1176/ajp.148.5.592>

60 Importantly, prevalence rates of posttraumatic symptomology and diagnoses are sensitive to numerous factors, including how long after the event the measures are collected. In the reported studies, these data were collected anywhere from one week to three years post-shooting, which undoubtedly contributes to the variation in reported rates of PTSD and other mental health outcomes.

62 Schildkraut, J., & Muschert, G. W. (2019). *Columbine, 20 years later and beyond: Lessons from tragedy*. Prager. Here, the survivor (Zach) witnessed Dave Sanders, the teacher who was killed that day, get shot by the perpetrators. He also saw the bodies of two deceased students as he and his classmates were being evacuated from the school by law enforcement.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

63 As an example, following Columbine, just about 7 percent of the more than \$800,000 in funding disbursed to primary victims was for medical and dental expenses. By comparison, 68% of funding was allocated to mental health-related expenses. How much is needed to support individuals who are physically injured will depend on not only how many people are impacted in this capacity as well as the type of injuries sustained, but also whether they have health insurance that can provide coverage. See *Colorado's CVC response to the Columbine tragedy*. (n.d.). Retrieved January 9, 2022 from <https://docs.google.com/viewer?a=v&pid=sites&srcid=c3RhdGUuY28udXN8dHJhY3xneDo2NjA3NzljODNlMzY4MzVi>

affect using creative arts therapy after a school shooting: A pilot study. *The Arts in Psychotherapy*, 65, 101586. <https://doi.org/10.1016/j.aip.2019.101586>

90 Importantly, during the screening and vetting processes, it is important to account for cultural factors when selecting approved providers. These cultural factors, such as traditions, norms, and values, can impact how impacted individuals mourn the tragedy as well as how and when funerals are conducted. Ensuring that cultural competence underlies support efforts will be critical. See, generally, Cacciatore, J., & DeFrain, J. (Eds.). (2015). *The world of bereavement: Cultural perspectives on death in families*. Springer International.

It also is important to account for other potential impediments to support services, such as language barriers and immigration status, to ensure that those who need to access such resources can. Blocked opportunities that restrict access to support may lead to persistent and exacerbated mental health distress, which in turn adversely affects both the individual and the community.

100 For context, in both the United States and Canada, homicide accounts for 0.2%-0.3% of all violent crime offenses known to law enforcement.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

101 Hawkins, N. A., McIntosh, D. N., Silver, R. C., & Holman, E. A. (2004). Early responses to school violence: A qualitative analysis of students' and parents' immediate reactions to the shootings at Columbine High School. *Journal of Emotional Abuse*, 4(3/4), 197-223. [https://doi.org/10.1300/J135v04n03\\_12](https://doi.org/10.1300/J135v04n03_12); Thoits, P. A. (2011). Mechanisms linking social ties and support to physical and mental health. *Journal of Health and Social Behavior*, 52(2), 145-161. <https://doi.org/10.1177/0022146510395592>

102 Schildkraut et al. (2021). See note 4.

103 A notable gap in the scholarly literature assessing the impact of mass shootings is the failure to utilize qualitative methodologies to provide a rich and robust understanding of survivors' experiences. Just one study to date, conducted by this report's author, has begun to address this limitation. The remainder of this section is based on this research, published in part in Schildkraut et al. (2021). See note 4.

Common ground: The development of a support group for survivors of homicide loss in a rural community. *Social Work with Groups*, 31(3-4), 239-254. <https://doi.org/10.1080/01609510801980971>; Briere, J., & Scott, C. (2006). *Principles of trauma therapy: A guide to symptoms, evaluation, and treatment*. Sage.

105 For more information on The Rebels Project, visit their website at <https://www.therebelsproject.org>.

106 Hawdon & Ryan (2012). See note 9. See also Jackson, S. D. (2017). "Connection is the antidote": Psychological distress, emotional processing, and virtual community building among LGBTQ students after the Orlando shooting. *Psychology of Sexual Orientation and Gender Diversity*, 4(2), 160-168. <https://doi.org/10.1037/sgd0000229>

107 As an example, one survivor interviewed by this report's author who was a junior at Columbine on the day of the shooting moved out of state to attend college. She noted that being away from her family, friends, and others who attended the school made her feel "very isolated," which had an adverse experience on her college experience.

108 There is no one "right" way to move forward after a tragedy like a mass shooting, and different communities have taken different approaches to restoring, rebuilding, or otherwise repurposing impacted locations. Sites such as the Columbine school library, the movie theater in Aurora, and the Walmart in El Paso, Texas, were renovated and reopened to continue to serve the community. Sandy Hook Elementary School was torn down after the shooting, and a completely new school was built on the same site. The First Baptist Church in Sutherland Springs, Texas, originally was turned into a memorial, but parishioners voted in 2021 to tear it down. Although Pulse nightclub permanently closed for business after the shooting, the location was designated as a national memorial by President Joe Biden in 2021 and will be turned into a permanent memorial with a museum and education center located less than a half mile from the property.

109 See National Association of Crime Victim Compensation Boards. (2000). *Compensation protocol: A guide to responding to mass-casualty incidents*. [https://cdpsdocs.state.co.us/ovp/TRAC/RepsPubs/Natl\\_Assoc\\_Crime\\_Victim\\_Comp.pdf](https://cdpsdocs.state.co.us/ovp/TRAC/RepsPubs/Natl_Assoc_Crime_Victim_Comp.pdf)

110 Following the Columbine shooting, for instance, an administrative team was brought in to make individual assessments about how resources should be supplied to the 761 applications received from primary victims.

Initially after the Aurora movie theater shooting, a set amount of money was provided to victims who had been injured and to the families of the deceased. A team was brought in shortly thereafter to develop a formula,

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

which was based on whether the person had been killed or injured and, if the latter, how severe the injuries were (based on the number of nights spent in the hospital). Impacted individuals who did not stay in the hospital were not eligible for any funding. See Toolkit for Response for Advocates in Colorado. (2018). See note 33.

111 Office for Victims of Crime. (2020). *Antiterrorism and Emergency Assistance Program (AEAP): Types of assistances available through AEAP*. <https://ovc.ojp.gov/program/antiterrorism-and-emergency-assistance-program-aeap/types-assistance>

112 Notably, there is no specific period that has been identified for being an appropriate point at which to terminate resources. More than 20 years after the shooting, Columbine survivors still acknowledge needing ongoing support, with some still not even getting initial assistance.

113 Office for Victims of Crime. (2015). *Helping victims of mass violence and terrorism: Planning, response, recovery, and resources — Needs assessment of event or criminal act*. <https://ovc.ojp.gov/sites/g/files/xyck-uh226/files/pubs/mvt-toolkit/victim-assistance.html#naeca>

114 Nurmi, J. (2017). *Shared experiences of mass shootings: A comparative perspective on the aftermath*. Routledge.

115 For memorial items left in the aftermath of a mass casualty event, the community will require a system to be able to collect and store the items until further decisions can be made. Items that pay tribute to a specific victim may be offered to that individual's family, who can then determine how it should be treated (kept, donated, or disposed of). More general items that commemorate the broader tragedy may be collected and used later in a permanent memorial. See Toolkit for Response for Advocates in Colorado. (2018). *Initial and permanent memorial sites*. [https://cdpsdocs.state.co.us/ovp/TRAC/Long-Term/Permanent\\_Site\\_Memorials.pdf](https://cdpsdocs.state.co.us/ovp/TRAC/Long-Term/Permanent_Site_Memorials.pdf)

119 For recommendations and considerations for organizing annual observances, see Toolkit for Response for Advocates in Colorado. (2018). *Annual observances*. [https://cdpsdocs.state.co.us/ovp/TRAC/Long-Term/Annual\\_Observances\\_narrative.pdf](https://cdpsdocs.state.co.us/ovp/TRAC/Long-Term/Annual_Observances_narrative.pdf)

120 Hawke, A., & Ness, O. (2017). Rituals that helped heal a nation after a terror attack. *Scandinavian Psychologist*, 4, e6. <https://doi.org/10.15714/scandpsychol.4.e6>

121 This can help to address the issue of onlookers. Numerous communities have noted that people come by, either for altruistic or morbid reasons, to the location where the mass casualty event occurred. If this location is still in operation, however, it can make it uncomfortable or even insecure for the people who must go to the space (e.g., for work, school, or other purposes). Situating the memorial some distance away may draw the onlookers away and provide the opportunity for those most affected to heal without fear of disturbance.

## SUPPORTING SURVIVORS AND COMMUNITIES AFTER MASS SHOOTINGS

122 Although resiliency centers are not clinically focused, they may offer referrals to psychotherapists and similar resources as needed.

123 See, for example, The Resiliency Center of Greater Philadelphia. (2021). <https://theresiliencycenter.com/>

124 Morrow, E., Call, M., Marcus, R., & Locke, A. (2018). Focus on the quadruple aim: Development of a resiliency center to promote faculty and staff wellness initiatives. *The Joint Commission Journal on Quality and Patient Safety*, 44(5), 293-298. <https://doi.org/10.1016/j.jcjq.2017.11.007>

125 Importantly, the organization tasked with overseeing the center consulted with survivors and community members before deciding to close the center location and transition services to other community-based organizations. See Aurora Mental Health Center. (2019). *Announcement: Aurora Strong Resilience Center transition* [Press release]. Retrieved from <https://www.aumhc.org/wp-content/uploads/Aurora-Strong-Resilience-Center-announcement-4-29-19.pdf>

126 Beyond the interviews conducted by this report's author, only one dissertation published to date has examined any aspect of resiliency centers as a support for communities affected by mass shootings. See Solomon, H. R. (2020). *Appreciative inquiry of an exemplary trauma informed wellness center created for the community and families affected by a school shooting* (Doctoral dissertation). Nova Southeastern University. [https://nsu-works.nova.edu/cgi/viewcontent.cgi?article=1068&context=shss\\_dft\\_etd](https://nsu-works.nova.edu/cgi/viewcontent.cgi?article=1068&context=shss_dft_etd)

127 Information contained herein, unless otherwise cited, is based on interviews by this author with several resiliency centers and community partner agencies for this report. In order to maintain confidentiality, only the main themes of these interviews are discussed.

128 For full details for the program, including eligibility requirements, see the website for the Office of Victims of Crime: <https://ovc.ojp.gov/program/antiterrorism-and-emergency-assistance-program-aeap/overview>.

129 Since its establishment, Parkland Cares has awarded \$800,000 to 10 non-profit organizations. This has enabled these organizations to provide 500 hours of crisis intervention, 2,843 hours of trauma-informed therapy, 757 hours of case management, and more. See Parkland Cares. (2022). *Parkland Cares: Impact on our community since 2018*. <https://parklandcares.org>

## Definitions

**Intimate partner violence (IPV)**, sometimes referred to as domestic violence, refers to violence and abuse that occurs in the context of an intimate relationship. This relationship can refer to a dating relationship, cohabitation, or marriage and includes same-sex relationships. Although both men and women can be perpetrators of violence, research suggests that male violence against women is more frequent and more severe in terms of physical harm, psychological harm (e.g. victim fear, changes in behaviour) absenteeism from work, and risk of death (Conroy, 2021a, Conroy, 2021b, Cotter & Savage, 2019). IPV includes a range of different behaviours, including but not limited to the use of physical violence against an intimate partner. Other common forms of IPV are sexual abuse (any unwanted, nonconsensual activity), psychological or emotional abuse (gestures, words or activities that serve to threaten, intimidate, undermine, humiliate, or isolate the victim), economic abuse (actions that deprive a victim of the ability to provide for their own basic needs and/or those of their children), and spiritual abuse (exerting power and control over someone by using their faith or beliefs, blaming abuse on spiritual figures). Abuse may be perpetrated in person, through others, or via technology, as is the case when a perpetrator misuses technology to harass, stalk, threaten, or harm the victim with actions such as making threats via telephone, text message, or email; blocking caller-ID so the victim is unaware that the perpetrator is calling; sending and/or posting pictures or videos of the victim for the purpose of distressing or harming the victim; and accessing victim's accounts (email, phone, social media, etc.) without the victim's consent and/or without their knowledge. Although IPV may be an isolated incident, most IPV consists of repeated incidents and patterns of abuse.

**Coercive control** describes a pattern of behaviours to assert control over a person through repeated acts that disempower the other partner in a number of possible ways, including through fear for the safety of self or others, removal of rights and liberties or fear of this removal, by isolating them from sources of support, exploiting their resources and capacities for personal gain, removing the victim's rights and liberties, depriving them of the means needed for independence, resistance, and escape, or regulating their everyday behaviour. Coercive control is now being recognized in law, such as in the amendments made to the Divorce Act in Canada which include various forms of family violence such as a pattern of coercive and controlling behaviour or behaviour that causes a family member to fear for their safety or the safety of

## Secondary and Tertiary Intervention to Address Abuse Perpetration

another person (section 16-4). There have also been calls to have coercive control recognized in the Canadian Criminal Code (Gill & Aspinall, 2020).

**Children exposed to IPV** can refer to a child seeing, hearing, being told about, or seeing the aftermath of abuse and coercive control against an intimate partner who is their parent. Children who are exposed to IPV are at risk for both short- and long-term harm, including emotional, behavioural, and developmental problems. Exposure to IPV is recognized in Canada as a form of child emotional abuse (Public Health Agency of Canada, 2010).

**Meta-analysis and systematic review** are methods of combining the findings of many selected studies on a particular topic in order to synthesize an answer to a research question. These methods involve systematically reviewing and summarizing an area of research by setting a clearly stated objective with predetermined eligibility criteria for inclusion of studies, using an explicit and reproducible method of finding studies, assessing the validity of findings in the included studies, and systematically presenting and synthesizing the findings. A meta-analysis is a type of systematic review that uses statistical methods to combine the findings of many selected studies to provide one common measure of the results. Advantages to systematic review and meta-analyses are that results are based on much larger amounts of data than an individual study, meaning that there is usually increased confidence in the results (Littell, Corcoran & Pillai, 2008).

### Scope of the Review

In this review, I examine intervention approaches in terms of their ability to interrupt the use of abusive and harmful behaviours by male-identifying persons in intimate and family relationships. It is important to note four issues/questions that are *not* covered within this review. First, there are likely many other benefits to various intervention approaches discussed. For example, improved emotional regulation, better social support, greater access to employment, etc. In this review, such outcomes are evaluated only to the extent that they relate to abuse perpetration. Second, I have not covered interventions to address the use of gender-based violence in non-intimate relationships. Examples include acts of misogyny and sexual harassment perpetrated against strangers in online and public spaces (e.g., by incels). Third, this review focuses on interventions designed for those identifying as male, unless such interventions aim to address

Secondary and Tertiary Intervention to Address Abuse Perpetration

abusive behaviours with couples or with all genders. I have not examined interventions targeting use of intimate partner violence by persons identifying as female or as gender-diverse. Most existing interventions do not have the same content and approach for men using intimate partner violence as for women, and very few programs have been designed for individuals identifying as nonbinary. Finally, this report does not address approaches to prevent intimate partner violence from occurring, such as programs targeting young people in high schools, colleges, and universities.

This report reviews research on IPV interventions and presents a vision for a comprehensive system of specialized interventions for IPV perpetrators that prompts involvement as early as possible, through as many doors as possible, in a “web of accountability” for keeping perpetrators in view while working to promote victim safety and perpetrator change. My report is divided into four sections. To help guide readers, I begin by describing the overall vision for this web of accountability, which I then describe in more detail with relevant research evidence.

## 1. Overall Vision

This report will come to the overall recommendation for the development of specialized intervention for IPV perpetrators that uses a feminist intersectional lens; is flexible to individual needs; collaborates and aligns with services for survivors of gender-based violence; engages and collaborates with criminal justice, addictions, mental health, child and family mental health, and social services; and is offered by a workforce with specialized expertise in this area. Such a service would create a “web of accountability” for IPV perpetrators – a way of keeping perpetrators in view while working to promote victim safety and perpetrator change. This system would help to close current loopholes that implicitly condone the actions of perpetrators by allowing them to feel vindicated or victimized by the system, or that place the burden of risk management on victims, family members, neighbours, and community members. At present, perpetrators may engage with a range of services and agencies, a minority of which recognize and respond to abuse-related risk. IPV perpetrators rarely come in contact with service providers who have the specialized expertise necessary to manage risk and promote change. Services often do not include analysis of factors and risks that give rise to men’s abusive conduct, resulting in missed opportunities to recognize risk and need and to effectively engage with perpetrators. When services to perpetrators exist, they often function in a disjointed and uncoordinated way, creating unnecessary siloes and gaps.

The overall vision of specialized intervention is based on multi-agency collaboration for consistent and constructive engagement with perpetrators over time. Such a system should recognize that IPV constitutes “core business” in addictions, policing, and child protection and is an extremely common root and/or co-occurring problem for individuals receiving mental health and social services (e.g., employment assistance) and within child and family mental health services. It should build on existing IPV specialist perpetrator agencies by continuing to offer the group-based services that also include partner contact, which has been the hallmark of the field, but it would also expand agencies’ mandates. The broader mandate would include specialized groups for specific populations (e.g., men presenting with both addictions and IPV, men with diverse identities, cultures, and languages, etc.), comprehensive intake meetings as a basis for assessing risk and need, individual case management during service for risk management, follow-up planning, and the ability to flexibly provide individual services to address risk.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

Services would be offered by a workforce with specialized knowledge of IPV, including skills to centre diversity and engage actively in decolonization. In Nova Scotia specifically, this would mean building on the six programs within the province that have as a core mandate the aim of addressing perpetration of IPV.<sup>1</sup> Augmented funding would gradually grow a suite of service options that is flexible to meet the needs of men and include provisions for cross-agency work to facilitate greater coordination of services. Victim safety, including the safety of children, would remain a core guiding priority of service, and as such, programs would maintain their strong linkages to services for survivors. Finally, this system should include investments that can strengthen collaborative responses that bring together organizations within a community. Coordinated community response processes would allow organizations to collaboratively plan for ways to address high-risk situations and seemingly intractable perpetrators and to ensure clear consequences and collective responsibility to address men's potentially ongoing abusive and violent behaviour, risk for such behaviours, and failure to comply with court orders.

### 1.1. A Feminist, Intersectional Lens

Discussion of intervention to address IPV can easily and quickly move into old controversial territory on whether to take an approach that recognizes gender and inequity as key contributors to abusive behavior or an approach that focuses instead on social determinants of health (e.g., adequate food, housing) and psychological aspects of violence in relationships (e.g., poor emotion regulation, men's trauma). This debate is often over-simplistically and inaccurately reduced to using or not using the Duluth model or, even more inaccurately, using the Power-and-Control wheel (<https://www.theduluthmodel.org/wheels/>) during intervention (Gondolf, 2007).<sup>2</sup> At the onset of this report, this debate can be set aside because contemporary theories have moved beyond this blunt dichotomy.

<sup>1</sup> See the province of Nova Scotia's webpage "Men's Intervention Programs," <https://novascotia.ca/coms/families/MensIntervention.html> (last updated 22 November 2012).

<sup>2</sup> The Duluth Model is a model of intervention based on shifting the way a community works together to ensure victim safety and promote perpetrator accountability. One component of the Duluth model is psycho-educational program for perpetrators. The Power-and-Control Wheel is a resource developed following the Duluth model that is now widely used to describe how a variety of abusive behaviours are used by a perpetrator to gain power and control over a victim (Pence, Paymar & Ritmeester, 1993).

## Secondary and Tertiary Intervention to Address Abuse Perpetration

Though they are beyond the scope of this report, contemporary theories and models of IPV perpetration consistently incorporate multiple intersecting factors as explanatory. For example, the social-ecological model provides a comprehensive framework for understanding IPV perpetration that includes risk factors from across four ecological levels: societal (e.g., gender inequality), community (e.g., community poverty), relationship (e.g., conflict resolution; together or separated relationships), and individual (e.g., exposure to domestic violence during childhood) (Centre for Disease Control and Prevention, 2021; Hardesty & Ogolesky, 2020). This academic focus on multiple drivers of IPV is echoed in national and international consensus documents from major policy bodies, which state that IPV services should recognize gender inequity, along with other intersecting forms of inequity, as important drivers of IPV (i.e., the feminist approach), alongside personal factors that contribute to or exacerbate IPV (i.e., a social determinants and/or psychological approach) (see Guedes et al., 2016). As stated in the final report from Victoria Australia’s Royal Commission into Family Violence:

We can have a feminist approach, but still apply RNR [Risk, Need, Responsivity] principles and we believe that programs need the capacity, not to have a different type of program, but to overlay what they are already doing ... with a capacity to be able to have an individualised tailored approach and to address some of these other issues, but that doesn’t necessarily mean abandoning a gendered based approach to the work (Neave, Faulkner, & Nicholson, 2016: Volume 3, p. 259).

### **1.2. Coordinated and integrated responses**

A comprehensive system of intervention for IPV perpetrators is built on a foundation of coordination and integration across services. To close the gaps in our systems and create a web of accountability for perpetrators, there needs to be enhanced coordination, collaboration, and information-sharing between specialist IPV service providers and other systems in which perpetrators and their families are involved, including policing, justice, addictions, child protection, and mental health. IPV is a prevalent and pervasive social problem, and it needs to be addressed as such. Various models can help with the kind of necessary multi-agency collaboration and tracking of higher-risk perpetrators. Such responses can build on community-based coordinating committees, situation/high-risk case conference committees, co-location models, and cross-agency secondments. Whatever the model, it is necessary to ask and answer: Who is following up with the perpetrator? How is the perpetrator’s level of dynamic risk being monitored, and who is communicating this information back to the survivor? If one form of

## Secondary and Tertiary Intervention to Address Abuse Perpetration

intervention didn't work, how will we know, what is the next plan, and who is going to do outreach and follow up to make sure it works? Querying how our systems do or do not function in ways to keep the perpetrator in view is part of the accountability required of a community that takes IPV seriously.

**1.3. Multiple Routes to Engagement**

Finally, and as will be reviewed in more detail in section 4 below, a system of response to IPV perpetration must have multiple routes of engagement and entry. Currently within Canada, most identification of IPV perpetration is done with and through police and the justice system. This is despite many years of recommendations that a much broader range of community members (i.e., neighbours, friends, families, work colleagues), services (e.g., health care, social service, housing), and systems (e.g., mental health, child protection) be trained to recognize key risk factors and warning signs of IPV, have the capacity to respond in safe and effective ways, and be able to make referrals to specialist interventions for this issue. In part, the problem rests in the fact that professional education efforts have often focused primarily on recognizing and responding to victimization, with much less focus on recognizing and responding to perpetration. Additionally, the success of such efforts has been hampered by the fact that even when IPV perpetration is identified, in many communities across Canada, there is limited access and/or long waitlists to access specialist service providers to work with IPV perpetration outside of justice-based referrals. Required is a system in which:

- Services can be easily identified;
- Services can respond to perpetrators immediately with short-term assessment and management of dynamic risk;
- The range of service options is wide and able to provide tailored and culturally appropriate services to perpetrators to promote change;
- Services work alongside survivor-focused organizations in broader efforts to end IPV in society;
- A wide range of health and social service professionals regularly consult and refer to these services.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

**1.4. Nova Scotia Exemplar**

Within Nova Scotia, the Bridges Institute is an excellent example of the type of specialized service agency needed to address IPV perpetration.<sup>3</sup> Bridges has a clear mandate and specialty in addressing IPV, with a core part of their mission being to seek to prevent domestic violence by raising awareness about different forms of abuse. Bridges offers these services within the context of a broader suite of related interventions that can be individualized to the risks and needs of individuals. Recognizing the need for multiple routes to engagement, the staff complement includes outreach workers who engage with communities with preventative education and who can help facilitate referral. Bridges also works in close collaboration with services for survivors and is a core partner in organizing inter-agency teams that bring together representatives of local agencies to coordinate responses to intimate partner violence within the community.

**2. Interventions to Address Abuse Perpetration: Evidence of Efficacy**

This section of the report will review the current state of programming for IPV perpetration in Canada, summarize research on the efficacy of short-term, group-based programming, and consider the promise of a range of recommendations made for improvement.

**2.1. Typical Canadian Programming for IPV Perpetration**

In every province and territory in Canada, there is at least one intervention program offered that is specifically designed to address IPV perpetration. A substantial number of these programs serve only men referred by the justice system. Others serve the needs of court-referred perpetrators (who make up a majority of participants) and men who attend voluntarily (i.e., self-referral) or as a result of a referral from another service or agency (e.g., family service agency, child protection service). Very few IPV perpetrator programs in Canada provide services *only* to voluntarily attending men. Historically, many of the programs for perpetrators were offered by standalone agencies or shelters that saw their role as providing prevention, public education, and advocacy to end IPV. Today, many programs across the country are housed in larger service agencies (such as John Howard Society), family service organizations, health services, or

---

## Secondary and Tertiary Intervention to Address Abuse Perpetration

Indigenous organizations (for more information, see Heslop et al., 2016; and Scott, Heslop et al., 2017).

Most agencies that offer intervention for IPV perpetrators have one choice of intervention: a program that is group-based and runs for a length of between 12 and 27 weeks. Exceptions are programs for men deemed as at low risk to reoffend and who are referred through diversion court processes; these are sometimes shorter. In some regions, additional program options are offered to IPV perpetrators deemed at higher risk for re-offending. In BC, for example, the Respectful Relationships program (ten sessions, 2.5hrs per session) is provided to all IPV perpetrators under probation supervision, after which moderate- to high-risk perpetrators are referred to the Relationship Violence program (seventeen sessions, 2hrs per session). There are a small handful of programs that engage men for between 40 and 52 weeks of service. Although most services are primarily group-based, a sizable minority offer individual sessions as a standard component of their program. Individual sessions are also often a nonstandard part of intervention for men who cannot be served in a group, such as those with significantly compromised cognitive skills or those who deal with psychiatric issues. Programs that offer both group and individual sessions typically hold individual sessions before group to focus on issues of engagement. Couples therapy is offered by few agencies, but very seldom as a first point of access for perpetrators. Most programs across Canada also include outreach and contact with partners as part of services.

In terms of theoretical orientation, about one third of programs in Canada describe their primary mode of intervention as psycho-educational, a third as cognitive behavioral, and the final third as narrative. Many programs also describe using a combination of perspectives. Agencies providing services to cultural minorities often indicate that programming has been adapted to the specific population being served. Differences in stated theoretical orientation aside, a review of the content of intervention finds broad consistency. Virtually all programs include sessions devoted to defining and describing abuse in intimate partner relationships and raising awareness of the impact of this abuse on others. Programs all include a focus on men taking responsibility for past abuse. Most programs include sessions on recognizing and managing intense emotions and skill-development/problem-solving for difficulties in relationships. Often programs include discussion of warning signs for conflict or abuse, awareness of self-talk, and material designed to prompt the development of healthier relationships. Less

## Secondary and Tertiary Intervention to Address Abuse Perpetration

consistent across programs are materials on men's inner experience of shame, trauma, grief, loss, and self-care. There is also varying focus on addressing the influence of masculinity and gendered attitudes and norms on abusive behaviour.

## 2.2. Is It Possible to Change Abusive Behaviour?

The question of whether intervention for IPV perpetrators is effective is often conflated with the question of whether or not it is possible to change abusive behaviour. To start, it is useful to consider evidence of consistency and change in IPV. There is clear evidence from multiple sources and across several countries that a significant proportion of men who engage in abusive behaviour at one time do not continue once this behaviour has been identified. Longitudinal follow-ups of men generally find that between one third and two thirds of men who have perpetrated at least one instance of abuse go on to avoid subsequent abusive behaviour as measured by self-, official, and victim reports (Babcock et al., 2004; Gondolf, 2012; Kerr et al., 2017; Klein & Tobin, 2008; Millstead & Coghlan, 2016). Perpetration of emotional and psychological abuse tends to decrease alongside reductions in physical abuse for the majority (Gondolf, 2012).

Focusing on Canadian data, recent analyses of victim-reported abuse found that four in ten victims (40%) report experiencing a single incident of intimate partner violence in the past five years (Conroy, 2021b). Most other Canadian data relies on rates of recidivism in police data, which tends to show somewhat lower rates of recidivism. Hilton and Eke (2016) have found that with an average follow-up of 7.5 years (including significant time in the community), 24% of perpetrators had a new IPV offence documented by police, not including charges related to breaching administrative conditions (e.g., violating a no-contact order, failing to comply with a court order to attend intervention). Similar results have been reported by Jung and Buro (2017) in their research on recidivism data from Alberta, where over an average 3.3-year follow-up, 16% of male offenders had subsequent charges for IPV-related offences and 25.2% for any subsequent violence. When administrative charges are included in follow-up, rates of recidivism generally fall between 50 and 55%. **Table 1** provides similar data over three years from a large police jurisdiction in Ontario.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

*Table 1: Rates of IPV and general reoffending over three years in a large Ontario jurisdiction*

Individuals charged with IPV-related offences over a 3-year follow-up period (breaches excluded)			Percent also charged with non-IPV related offenses (tickets excluded)	
	<i>n</i>	%	<i>n</i>	%
0	1,980	76	584	30
1	398	15	226	57
2	151	6	104	69
3	48	2	38	79
4 +	29	1	24	83
Total	2,606	100	976	37

Table 1. IPV charges were captured by flagging cases where the individual was identified as a person of interest (suspect or subject), or were arrested, charged, issued a ticket, or issued a warning by the police officer. The baseline (index) case for each accused person was drawn from the years 2015–2017. Data from 2015–2020 was included in the analyses, allowing for a 3-year follow-up period for those accused during the 2015–2017 time-period.

Looking at the first set of columns, over a three-year follow-up period, 24% of accused were arrested for at least one subsequent IPV offence over three years, excluding charged related to breaching administrative conditions; 76% were arrested only once.

In reviewing data on IPV recidivism, it is also important to note that longitudinal follow-up studies and intervention studies generally find that there is a group of IPV perpetrators, often around one in five (or 20%), who reoffend quickly and are disproportionately likely to engage in abusive behaviour that is injurious and potentially lethal. These reoffenders are predominantly male. Studies tracking recidivism in IPV consistently show that risk for repeat offending is highest in the weeks and months following arrest, with some studies suggesting a peak at around four weeks, and all finding that a majority of recidivism occurs within six months (Boxall & Morgan, 2020; Kerr et al. 2017; Morgan et al., 2018; Poynton et al. 2016). Importantly, this means that re-offending is occurring at a point in time when perpetrators are, or should be, visible within the system. It is also clearly the case that for domestic violence, like other forms of offending, prior offending predicts future offending, with each prior incident increasing the odds of future incidents (Boxall & Morgan, 2020; Morgan et al., 2018).

A question often asked is whether the subgroup of men who are most likely to re-offend are those who can be described or diagnosed as having antisocial personality disorder, and, relatedly, whether such men are particularly poor candidates for IPV intervention. The literature on these questions was recently reviewed and summarized by Hamberger and Langhinrichsen-Rohling (2020), who drew connections between the characteristics of antisocial personality

## Secondary and Tertiary Intervention to Address Abuse Perpetration

disorder and men described in perpetrator typology research as generally antisocial (i.e., perpetrators who commit violence in both intimate and non-intimate relationships, who have longer and more severe histories of criminality, and who experienced the most childhood adversity). The authors were cautious, however, in drawing conclusions about antisocial personality disorder specifically, since neither diagnosis of antisocial personality disorder nor antisocial traits such as callousness have consistently predicted reoffending or treatment response. In the limited intervention research available, there is no consistent evidence that current interventions are less effective with men who have features of antisocial personality disorder as compared to others. Hamberger and Langhinrichen-Rohling have gone on to suggest that there is some reason to argue that the ways that most intervention is organized – structured and skills- or action-oriented and including consequences for non-compliance – is well suited to working with antisocial clients.

**2.3. Methodological Limits of Studies on Intervention**

Many studies have been conducted on the effectiveness of IPV perpetrator intervention programs. Due to the volume of literature, comments and summaries herein are based mostly on systematic reviews and meta-analyses. There are several limitations to the research methodology used in these studies that must be understood so that the results may be interpreted correctly. First, most of this research has been conducted in the United States and some in Europe. Many fewer studies have examined programs offered in Canada. Additionally, meta-analytic literature is biased towards outcomes for men who were court-mandated to attend intervention, not men who self-referred to the programs. Other methodological critiques include deviations from randomization, variations in how attrition is analyzed, inconsistency in length of follow-up, and disregard of the quality or consistency of services provided (Cheng et al., 2021; Gondolf, 2001; Gondolf, 2012; Karakurt et al., 2019).

Another important critique of this literature is its narrow definition of a successful outcome. Most studies use officially reported recidivism of IPV as the main outcome, which has resulted in an over-focus on physical violence perpetration while ignoring other damaging forms of domestic violence (e.g., nonviolent controlling behaviours; psychological abuse, etc.). A myopic focus on physical violence recidivism as an outcome measure for program effectiveness may also fail to capture other important outcomes following intervention, such as the victim's

## Secondary and Tertiary Intervention to Address Abuse Perpetration

sense of safety, reductions in nonphysical forms of abuse, or changes in men’s attitudes that may be related to violence (e.g., acceptability of violence).

Addressing this issue from the perspective of survivors, Project Mirabal in the United Kingdom interviewed survivors and program providers to identify potential domains of outcomes that should be considered (Kelly & Westmarland, 2015). Measures for six outcome domains were developed on the basis of this work. One was safety and freedom from violence and abuse; the other five were respectful communication; expanded space for action (including reductions in controlling behaviour by perpetrators); safe, positive, and shared parenting; men’s enhanced awareness of self and others (including an understanding of the impact that domestic violence has had on their partner and children); and finally, for children, safer, healthier childhoods in which they feel heard and cared about by their fathers. Few studies have examined this broader range of outcomes.

Other critiques of outcome have pointed out that changes or lack thereof in the broader systems around men and their victims are also often ignored in research on program outcomes. For example, evaluations seldom ask questions like: did men’s participation in the program result in increased communication between key systems (e.g., police, shelter, child protective services) about this man and his level of risk throughout the program, and did this increased communication result in increased support for and feelings of safety in women and children (Gondolf, 2012)?

#### **2.4. General Conclusion: Short-Term “One-Size-Fits-All” Intervention Results in Small Reductions in IPV Perpetration**

Summarizing across literature and with methodological limitations in mind, the overall conclusion from meta-analyses is that short-term, one-size-fits-all interventions for IPV result in small reductions in IPV recidivism of men who complete intervention (Arce et al., 2020; Babcock et al., 2004; Cheng et al., 2021; Fernández-Fernández et al., 2021; Karakurt et al., 2019; Smedslund et al., 2011). In other words, referring men to intervention programs results in a modestly reduced rate of recidivism. Results tend to look more promising when either official reports (i.e., re-arrest) or men’s self-reports on recidivism are used, compared to when the results are based on victim reports of perpetrator recidivism, though this result must be tempered by the generally low response rate for victim reports. Even if effect sizes are small, the impact of such

## Secondary and Tertiary Intervention to Address Abuse Perpetration

change should not be underestimated when viewed at a population level. Using modest effectiveness rates as the basis of estimation, Paymar & Barnes (2006) have calculated that US perpetrator intervention programs protect an estimated 42,000 intimate partners from violence annually.

### 3. Recommendations for Improving IPV Perpetrator Intervention Services

An important challenge in interpreting the current literature on IPV interventions is that the vast majority of research examines outcomes of short-term, one-size-fits-all intervention. This is despite the fact that since the early 2000s, recommendations have been made and consistently repeated for a number of key program improvements. In part, these recommendations are based on studies of moderators of intervention (i.e., characteristics of intervention or of individuals receiving intervention that contribute to greater success). Many factors that might influence the likelihood of IPV intervention being successful have been examined, and many discarded. Aspects of intervention that are generally *not* predictive of intervention success across multiple studies include specific theoretical approaches (e.g., CBT versus feminist versus narrative), the presence or absence of personality disorder/psychopathology in men, program length (though generally only shorter-term programs have been studied), and whether or not men are attending treatment voluntarily or as a result of a court order (Arias et al., 2013; Cheng et al., 2021; Fernández-Fernández et al., 2021; Ferraro, 2017; Karakurt et al., 2019).

Factors that *are* more consistently supported include those related to men's substance use, the extent to which intervention uses a motivation enhancing approach, the use of the risk, needs, responsivity model to organize intervention, and the degree to which programs include trauma components (Karakurt et al., 2019; Santirso et al., 2020; Scott et al., 2015; Stewart et al., 2014). Program dropout versus completion is also consistently predictive of recidivism, raising the likelihood of reoffending by a factor of around 2.5 (Bennett et al., 2007; Gondolf, 2004; Jones et al., 2004). There is debate in the literature as to whether the association between dropout and recidivism is due to its co-occurrence with other variables (e.g., young age, prior criminal offences, unemployment, and substance abuse) that are themselves predictive of recidivism or whether dropout itself is an important dynamic risk indicator. Regardless, there is agreement that dropout is an important indicator of increased risk for reoffending. Aspects of intervention that are less often investigated but have some support include group versus individual sessions,

## Secondary and Tertiary Intervention to Address Abuse Perpetration

culturally specific programming, and considering variables such as level of staffing, training, supervision, and the way in which the program is connected to the broader system of response.

Numerous academic commentaries have summarized literature on recommended changes to intervention for IPV perpetrators (e.g., Aaron & Beaulaurier, 2017; Fitz-Gibbon et al., 2020; Scott, Heslop et al., 2017). Building from and adding to this body of research are major expert review processes aimed at making recommendations to reduce IPV. Two notable examples are the 2009 Experts Roundtable commissioned by the Family Violence Prevention Fund at the National Institute of Justice (Cluss & Bodea, 2011) and the Royal Commission into Family Violence in Victoria Australia (Neave et al., 2016). The following section provides a review and commentary on the most commonly identified recommendations for change reported in expert review processes and in the academic literature.

### **3.1. Funding for Staffing, Supervision, and Ongoing Training**

A consistently identified concern for perpetrator programs is adequate program funding, which in turn is associated with consistent staffing and ongoing supervision and training. The lack of training and supervision is sometimes influenced by funding arrangements. Funding arrangements for perpetrator programs vary but have often been based on a “per group” or even a “per group completion” basis. Funding for contacting and supporting survivor partners is often a small “add on.” Particularly in non-urban, northern, and culturally diverse regions, this often means that staff are hired only part-time to do this work. Even in larger centres, it is common for there to be waitlists for accessing services and significant strains on funding for activities such as individual follow-up with clients, public education, and collaborative community work.

In addition to the need for funding for full-time, specialist staff members, there is a need to invest in staff training and supervision. The Centre for Research and Education on Violence Against Women and Children (CREVAWC) has recently completed a survey on the training needs of IPV specialist service providers across Canada, including 121 responses from IPV specialists who work with men who perpetrate IPV (Lopez et al., 2021). The overall picture from these respondents is of a workforce whose members are not well prepared when they start their positions and do not have access to adequate training or supervision for ongoing skill development. Specifically, when asked to think back to when they started work in the field, over half of those surveyed (51%) reported that their training or preparation was “not nearly enough,”

## Secondary and Tertiary Intervention to Address Abuse Perpetration

and only 8% reported that they were well prepared to take on the job. Once working, less than half of service providers reported that they received individual or small-group supervision at least once a week (27%) or at least once a month (12%), with most of the remainder reporting that supervision was on an “as-needed” basis or done as part of debriefing (15%). In terms of ongoing training, 30% of respondents indicated that their service setting does not provide or require them to complete any annual formal training in a normal year and that few agencies had sufficient funding to support training. It is perhaps not surprising then that 58% of respondents reported that in a typical year, they participated in at least one ongoing training event relevant to their role using their own time and own money.

### 3.2. Workforce Capacity

A workforce capacity approach is one way to begin to address the wide gap the currently exists between the preparation of service providers and the expertise needed to intervene to end IPV. A workforce capacity approach is based on the recognition that responding effectively to IPV requires service providers with specialist knowledge, attitudes, and skills, or “core competencies” for IPV work. A capacity approach is distinct from one focused on empirically based programs in that it recognizes that although providing empirically supported programming is important and valuable, IPV service provision involves skills that both contribute to and go beyond a manualized group. For example, the workforce requires skills for making decisions on which men are and are not a good fit for group services, being aware of escalations in risk among clients, being able to communicate about risk to others, and making judgements in group about which direction to take an intervention.

A number of countries have taken a workforce capacity development approach to improving IPV service provision, including Australia (Victoria State Government, 2017) and New Zealand (New Zealand Government, 2017, New Zealand Government, 2021). Other efforts have been made within states, regions, and organizations in other parts of the world. In Canada, there has been significant work done to recognize and articulate the expertise of IPV service providers. Released in 2022 and based on collaborative work of over 70 service providers, survivors, and researchers from across all of Canada’s provinces and territories, the Flourishing Practice Framework for IPV specialists articulates the expertise of IPV specialist service

Secondary and Tertiary Intervention to Address Abuse Perpetration

providers in practice with: 1) women survivors, 2) infants, children, and youth who have experienced violence, and 3) men who have behaved abusively (Scott et al., 2022).

This framework (see **Figure 1**) was developed on the basis of a scoping review of the literature, qualitative interviews with IPV specialists and survivors, consensus-building methods, and many collaborative working group meetings and workshops over the course of two years. The Flourishing Practice model provides a roadmap for skill development for IPV service providers and direct investment in training. It was expressly not developed in service of a regulatory framework for the field or to promote professionalization; such goals would be inconsistent with the field's recognition and valuing of a range of expertise, including that of survivors, and with a commitment to actively decolonize. The model is briefly described here in order to demonstrate the depth and scope of practice, knowledge, and skills required to effectively address IPV.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

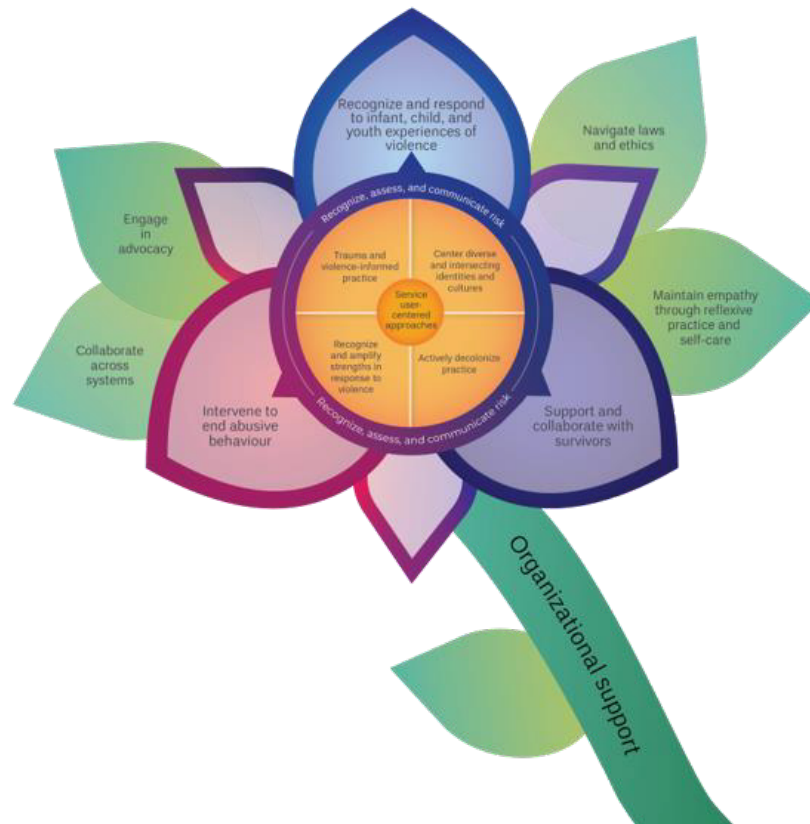

Figure 1. *The Flourishing Practice Model* (Scott et al., 2022, p. 17)

Most parts of the Flourishing Practice Model are equally important for all IPV specialists, regardless of whether they are working with women survivors, children exposed to IPV, or men who have perpetrated IPV. Areas of common expertise are represented by the stem, leaves, and core of the “flower.” Briefly, the “inner core” of the Flourishing Practice Model includes the knowledge and skills needed to work in ways that centre the experiences, identities, and strengths of those seeking services. Four areas of knowledge and skill are outlined as necessary for practicing in ways that center service users:

- 1) Being able to **centre diverse and intersecting identities and cultures** (e.g., knowing that different people experience violence differently and that IPV specialist work cannot

## Secondary and Tertiary Intervention to Address Abuse Perpetration

be done without a strong foundational capacity to apply an intersectional, anti-racist, and anti-oppressive approach);

- 2) **Recognizing and amplifying strengths in response to violence** (e.g., capacity to recognize and value the fact that service users are the experts of their own lives and that ways of responding to violence signify wisdom, strength, and resiliency);
- 3) **Actively decolonize practice** (e.g., IPV specialists need knowledge of colonization, need to be able to provide strengths-based services that center Indigenous cultures and identities, and need to commit within themselves to anti-colonization);
- 4) **Trauma and violence-informed practice** (e.g., recognizing and responding to the ways systems of intervention can be retraumatizing).

The knowledge and skills to centre service-user experiences is surrounded by the “outer core” of the model, which includes sector-wide fundamentals of risk and safety. For example, all IPV specialists should deep knowledge of risk and protective factors for IPV and an understanding that risk and safety are individual, intersectional, and dynamic, have knowledge of risk associated with different patterns and severities of abusive relationships, and have skills for promoting safety and accountability.

The “leaves” of the Flourishing Practice Model represent aspects of knowledge and skills that underlie the work of all IPV specialists. Included in this part of the model are knowledge and skills to:

- 1) **Navigate laws and ethics** (e.g., legal and court-related knowledge, skills required to support service users who are navigating these systems, and an understanding of how courts often exacerbate trauma associated with IPV);
- 2) **Engage in advocacy** (e.g., ability to identify systemic gaps in policies, programs, and services and to raise voices to prompt recognition and elimination of gender-based violence);
- 3) **Collaborate across systems** (e.g., provide a coordinated, holistic response to maintain the safety of service users, effectively conduct risk assessment, manage risk, and create safety and prompt collaboration of different types of services, including those related to basic needs, immigration, separation, mental and physical health, and more);
- 4) **Maintain empathy through reflective practice and self-care** (e.g., knowledge that bearing witness to and taking action against violence, abuse, and trauma can be emotionally challenging for IPV specialists, especially when such work is done within a system that fails to recognize and respond in a socially just way to IPV and intersecting systems of oppression).

Finally, “petals” of the Flourishing Practice Framework represent the specialized knowledge and skill that is unique to IPV specialists working in different areas or with different populations.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

These petals “grow” from the commonality in the other parts of the framework. Blank petals represent areas of expertise that have not yet been articulated. The petal for “Intervene to end abusive behaviour” includes capabilities for four aspects of practice:

- 1) **Managing risk and promoting safety in men who have behaved abusively** (e.g., adeptness in asking questions, gathering risk-related information, and monitoring, managing, and prompting change);
- 2) **Changing abusive behaviour** (e.g., capacities for centering adult and child survivor safety while working to increase men’s skills in emotion regulation, empathy, equality, and other skills necessary for healthy relationships);
- 3) **Recognizing and addressing denial, blame, and minimization** (e.g., capacity to recognize and address denial, blame, and minimization);
- 4) **Addressing fathering** in men who have behaved abusively (e.g., within an understanding of culture, social context, and intergenerational histories, helping men understand and prioritize the safety of children).

Taking a workforce capacity approach means investing in training and support for ongoing development of IPV specialists service providers in these areas of skills and knowledge. Clearly, developing the knowledge and skills articulated within this framework requires more than on-the-job training and as-needed supervision. Significant investment in ongoing training is warranted. It may also be worthwhile and necessary to consider the curricula of preparatory training programs (e.g., schools of social work, Master of Counselling) and ongoing training criteria of professional accrediting bodies to ensure workforce capacity.

### 3.3. Culturally Relevant, Holistic Programming

Although actively decolonizing practice and centering the diverse and intersecting identities and cultures of individuals accessing services are recognized as core priorities, obligations and necessary capacities of IPV specialists, there is widespread recognition within Canada that programs themselves need to be culturally relevant and ideally embedded within culturally specific services. There are several excellent models of holistic, community-based services for IPV perpetrators developed by Indigenous communities in Canada and elsewhere (see review by Gallant et al., 2017). An important feature of these programs is recognition of colonization, intergenerational trauma, and systemic social, economic, health, inequities as important contributors to men’s perpetration of violence. Building from this foundation, Indigenous models of intervention for IPV perpetration most often use a holistic approach that addresses men’s

## Secondary and Tertiary Intervention to Address Abuse Perpetration

violence against women and children alongside healing from experiences of victimization (Gallant et al., 2017). Programs developed within Indigenous contexts also consistently build cultural strengths, cultural connection, and healing into intervention models. For example, the Yarra model uses a culturally appropriate river metaphor to integrate thinking about addressing socioeconomic, political, and psychological aspects of men’s journey towards change, using gendered accountability, healing, intersectionality, and culture as foundational practice elements towards safety for women and children (Andrews et al., 2021). Culturally relevant programming is also critically needed for other groups in Canada that face structural and systemic inequities, including Black, Asian, South Asian, and other racialized Canadians, newcomers to Canada, and perpetrators of IPV who do not identify as male.

Although more research is needed, the most well supported benefits of culturally specific programming appear to relate to access and acceptability. Men value culturally specifically programming and appreciate attention to their specific identities and needs (Parra-Cardona et al., 2013; Williams, 1992). Being able to attend intervention that is culturally appropriate may also have the benefit of reducing dropout (Aymer, 2011; Waller, 2016). Success of programming, however, does not seem to vary based on whether or not programs are culturally specific (Gondolf, 2008), suggesting that common content/features of programming might be relevant to many perpetrators.

### **3.4. Beyond “One Size Fits All”: Coordinated Group-Based Interventions and Individual Case Management**

There is widespread agreement that services within a local area need to be integrated and coordinated as part of a comprehensive and holistic community-based response to IPV perpetrators and victims (Dobash et al., 2000; Davies & Biddle, 2018; Gondolf, 2002; Kelly & Westmarland, 2015). Coordinated community response models recognize that multiple service agencies will likely be involved with families experiencing IPV and that key information about risk and safety is likely held by different partners. By working together and coordinating service, coordinated community responses aim to break down silos, reduce fragmentation of services to victims to enhance their safety and well-being, and close gaps and loopholes in services to perpetrators to increase accountability.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

Beyond coordination, there is a need to expand the range of services that are available to go beyond one-size-fits-all interventions (Cluss & Bodea, 2011, Neave et al., 2016). Existing IPV perpetrator programs have been criticized for being “blind” to the variability of needs and contexts of participants. There is clear evidence that men who engage in abusive behaviour are heterogenous in many ways, including histories and patterns of past violence, current levels of risk for recidivism, presence of other co-occurring problems, and levels of overall disadvantage (Carbojosa et al., 2017; Dixon & Browne, 2003; Lishak et al., 2021). Academic, practice, and policy experts have continued to call for the development and evaluation of more individualized and targeted programs that respond to the diverse needs and characteristics of the men referred (Bowen & Day et al., 2019; Cluss & Bodea, 2011; Fitz-Gibbon et al., 2020; Neave et al., 2016).

A flexible and responsive system of intervention requires a combination of group and individual services. Group-based intervention should remain a feature of interventions for perpetrators. Qualitative studies that have asked men to reflect on the ways that intervention changed their abusive behaviours have demonstrated that men value group processes, including being challenged and held accountable for their behaviours by other men, seeing how other men achieve positive changes in their relationships, learning from the experience of other men, feeling supported by other men, reducing the perception of isolation, feeling increased motivation to change due to seeing other men’s progress or comparing how far they have come compared to newer group members, and in some cases, seeing the consequences for men who fail to make positive changes (Boira et al., 2013; Holtrop et al., 2017; McGinn et al., 2020; Morrison et al., 2021). There is also some evidence from studies that have directly compared outcomes of individual versus group-based approaches, showing that a group-based approach resulted in better outcomes (Murphy et al., 2020; Stith et al., 2004).

Individual sessions are recommended for providing case management, assessing and managing risk, and supplementing services to meet individual needs. From a practical standpoint, it is recommended that individual sessions be integrated throughout services. A practical example of a model of service that combines group and individual sessions is provided by the Caring Dads program for fathers who have perpetrated abuse in their families (Scott et al., 2006). Caring Dads begins with individual session(s) with men focused on engagement and motivation. Fathers then go into a seventeen-week intervention program, most of which is group-based but which also includes a mandatory individual session with men midway through. To

## Secondary and Tertiary Intervention to Address Abuse Perpetration

prepare for this session, group facilitators integrate information from the participant's referrers, partners, and the facilitator's own observations. They use this information as part of collaboratively creating a clear and measurable change plan with men individually. The implementation of this change then becomes the focus of the remaining Caring Dads sessions. Subsequent individual sessions are provided if men are not making progress in change and/or for whom a referral to an additional service is going to be required. These types of service models, which combine the strength of group-based change processes with the value of individual sessions for monitoring and communicating about progress, managing dynamic risk, and meeting needs not addressed in group-based services, should be a feature of future service development.

Beyond these more general recommendations to coordinate service and to combine group and individual models of intervention for more targeted and individualized service, four specific empirically-supported recommendations can be made: address clients' concurrent problems with substance use; address co-occurring criminal behaviours; provide specialized intervention to address men with complex mental health needs, including PTSD; and address fathering. These four recommendations are discussed in detail in the following sections.

*3.4.1. Addressing Concurrent Problems with Substance Use*

There is clear need for the development of tailored collaborative interventions for men presenting with problematic substance use and IPV. Substance abuse and IPV are highly comorbid problems (Cunradi et al., 2014), and multiple studies have linked substance use to an increased likelihood of perpetrating domestic violence (Choenni et al., 2017; Foran & O'Leary, 2008; Lipsky et al., 2005; Oram et al., 2013; Stith et al., 2004; Trevillion et al., 2015). Moreover, ongoing problematic substance use is a predictor of dropout from intervention and has emerged as one of the few consistent predictors of men's continued use of or desistance from violence (Choenni et al., 2017).

Despite high rates of co-occurring problems and frequent calls in the literature for integrated and coordinated IPV and addictions services, there are very few Canadian programs (and few programs generally worldwide) that offer any tailored or coordinated services for IPV and addiction. One exception was the Alberta-based "Sobering Effect" program, which is now discontinued due to lack of funding (Tutty et al., 2011). When such programs are available, research suggests that outcomes are improved (Tarzia et al., 2020; see Stephens-Lewis et al.,

## Secondary and Tertiary Intervention to Address Abuse Perpetration

2021 for an opposing opinion). In a recent meta-analysis and systematic review of programs for IPV, Karakurt and colleagues (2019) have concluded that combined IPV and substance use intervention or IPV intervention augmented with sessions addressing substance use results in significantly greater change. In-depth qualitative explorations have also supported the value of integrated intervention, with service-users and program providers emphasizing advantages in terms of exploring and addressing the complex interplay of substance use and IPV perpetration (e.g., Dheensa et al., 2021; Gilchrist et al., 2019). Although a promising direction for program development, it is worth noting that few studies have triangulated outcome data; in particular, there has been little corroboration of outcomes based on survivor reports. In programs where women were contacted to corroborate data, discrepancies have been found between men's and women's reports (Easton et al., 2018; Easton et al., 2007; Murray et al., 2020). More research in this area is needed.

*3.4.2. Addressing Co-occurring Criminal Behaviours*

Another common co-occurring issue is general criminal behaviour. Offense data generally finds that a substantial minority of IPV perpetrators have prior arrests for non-IPV-related violent and nonviolent crimes. Column 2 of Table 1 (see above) provides information on the relationship between IPV and non-IPV related recidivism. 57% of IPV perpetrators charged with one subsequent IPV offense over three years also had at least one subsequent charge for general offending. Among IPV offenders with three, four, or more subsequent IPV offenses, around 80% had other non-IPV-related charges. Given the relationship between IPV and non-IPV recidivism, it is perhaps not surprising that descriptions of heterogeneity in IPV perpetrators generally include general criminal behaviour. For example, in a Canadian study of the extent to which criminality might be useful in differentiating among subgroups of domestic violence perpetrators, Lishak et al. (2021) have found that the presence of co-occurring criminality was associated with more extensive childhood violence exposure, greater childhood externalizing behaviour, and more adult internalizing psychopathology. Data such as this has led researchers to suggest that in the population where IPV perpetration and general antisociality overlap, theories and models of criminal rehabilitation may be essential to understanding and promoting change (Moffitt et al., 2000).

## Secondary and Tertiary Intervention to Address Abuse Perpetration

Within the literature on criminal rehabilitation, there is a well-developed model of rehabilitation that directs many intervention responses: the Risk, Needs, Responsivity (RNR) model (Andrews & Bonta, 2006; Andrews & Bonta, 2010). The RNR model has three core principles: that the intensity of intervention effort should match the offenders' level of risk to reoffend (the risk principle); that intervention should address issues that predict future offending (the need principle); and that services should be matched to the learning style and situation of offenders (the responsivity principle). RNR principles have received a great deal of support in the empirical literature on general rehabilitation (Gendreau et al., 2006; Hanson et al., 2009). As just one example, on the basis of a meta-analysis of over 13,000 offenders in 97 correctional programs, Lowenkamp and colleagues (2006) found that programs adhering to the risk principle of the RNR model were associated with up to an 18 percentage point reduction in recidivism rates relative to programs that did not.

There is also good initial evidence for the value of integrating this model into IPV intervention approaches, with systematic reviews concluding that IPV programs that adhere to RNR principles have better outcomes (Travers et al., 2021). Consistent with the literature supporting this model, there is a move within Canadian IPV programs to align programs with the risk principle of RNR by providing longer services to men deemed at higher risk (Radatz & Wright, 2016; Stewart et al., 2014). British Columbia, Manitoba, New Brunswick, the Northwest Territories, and Nova Scotia have at least one domestic violence court that offers less intense intervention for offenders deemed at lower risk and more intense intervention for those deemed at higher risk. Canadian-based evaluations of these differentiated programs are promising. Evaluation of BC's Respectful Relationships/Relationship Violence program by the Research Division of Stroh Health found a 42 percent reduction in spousal assault reoffending over two years for individuals who completed the Respectful Relationships program (i.e. lower-risk offenders) as compared to a group of men who did not receive programming, though results may not have been maintained longer term. Also observed was a 50 percent reduction in domestic violence reoffending and a 60 percent reduction in general reoffending over two years for higher-risk men who completed the combined Respectful Relationships/Relationship Violence as compared to a group of men who received community supervision only (BC Ministry of Public Safety and Solicitor General, 2009). Stewart and colleagues (2014) have reported that moderate- and high-risk domestic violence offenders who were incarcerated by Correctional Services

## Secondary and Tertiary Intervention to Address Abuse Perpetration

Canada and received intervention showed statistically significant pre- to post-treatment changes in a range of attitudes and were 69 percent less likely than untreated offenders to be involved in a spousal assault incident following release.

Although the burgeoning development of differentiated systems based on RNR is promising, three major concerns warrant consideration. The first relates to program length and the risk principle. There is emerging international consensus that programs addressing low- and moderate-risk DV offenders should be at least 22 weeks in length and run over a period of at least six months (Neave et al., 2016; Respect UK, 2017). In terms of complex and higher-risk offenders, the criminal rehabilitation literature generally suggests that a minimum of 100 hours of intervention is needed to make a significant difference in rates of recidivism (Abrams et al., 2011; Bourgon & Armstrong, 2005; Lipsey, 1999; Makarios et al., 2014; Sperber et al., 2013). Most Canadian programs for both lower- and higher-risk IPV perpetrators fall short of these recommendations. Moreover, in the many communities across Canada that have only one model of group-based service, the only option for intervention with higher-risk perpetrators seems to be to refer them to complete the same program over and over again. This is clearly not adequate to address the needs of higher-risk, repeat perpetrators.

This question about intensity of service relates to the second point of concern: integration and coordination of services across systems. Many higher-risk IPV perpetrators present with a range of co-occurring problems also related to higher rates of reoffending. The needs principle of RNR requires consideration of all these needs. It might be that men at greater risk and with greater needs are in fact receiving a sufficient dose of intervention when all the services that they are receiving to address their individual needs are combined. Perpetrators may, for example, also be involved in services for substance abuse, for mental health, in support of employment, or for other reasons. What is less clear is how these interventions are or are not being coordinated to build on and reinforce each other, who is responsible for this coordination (particularly when there is no probation officer involved), and how this information is being shared among service providers working to prevent future offending.

Finally, within the RNR model more generally, evaluation focus has been on the outcomes for perpetrators, particularly rates of recidivism. As discussed earlier, there is a need for broader consideration of outcomes in programs for IPV perpetrators. In particular, there is a

## Secondary and Tertiary Intervention to Address Abuse Perpetration

need to consider how various aspects of the application of RNR-informed responses impact expanded space for action for survivors; safe, positive, and shared parenting; and men's enhanced awareness of self and others. There is also a need to consider how survivor voices are or are not considered in case coordination and planning. Future developments and evaluations of RNR models for IPV perpetrator intervention will benefit from having greater involvement of IPV specialists in consideration and planning.

### *3.4.3. Specialized Intervention for Complex Mental Health Needs, including PTSD*

A third area in which there is clear need for tailored collaborative interventions is mental health. As part of the critique of one-size-fits all programming, authors have suggested that short group-based intervention are likely insufficient for perpetrators with complex mental health needs, particularly those who present with concurrent diagnoses of post-traumatic stress disorder (PTSD), major depressive disorder, or other major mental health problems (Neave et al., 2016). Most research in this area has focused on two problems: PTSD and depression. There is considerable evidence that among men with co-occurring PTSD, symptoms of trauma increase risk of perpetrating severe IPV (Bell & Orcutt, 2009; Craig & Zettler, 2021; Marshall et al., 2005; Sherman et al., 2006; Spencer et al., 2019; Taft et al., 2011). In addition, there is evidence that within samples of IPV perpetrators, more severe PTSD symptoms predict more severe violence perpetration (Barrett et al., 2011; Shorey et al., 2012). Depression, as well, is a co-occurring diagnosis that deserves more attention. There is consistent evidence for a weak to moderate effect of depression as a risk factor for men's perpetration of IPV (Spencer et al., 2016), with the relationship between depression and abuse stronger when more severe IPV perpetration is considered (Birkley & Eckhardt, 2015; Schumacher et al., 2001). A consistent recommendation from domestic violence death review committees is for professional education of mental health professionals in recognizing and responding to risk for IPV (Jaffe, Scott & Straatman, 2020).

Effective IPV intervention with men who have complex co-occurring mental health problems requires a degree of collaboration between mental health and IPV services that very seldom exists. Findings from domestic violence death review committees and inquests consistently note that although a substantial minority of IPV perpetrators who go on to commit homicide have recent contact with the mental health system, mental health professionals seldom

## Secondary and Tertiary Intervention to Address Abuse Perpetration

ask about IPV or recognize IPV-related risks (even when risks are high) and fail to make connections between mental health and IPV risk. It has been recommended that training for all mental health professionals includes information on the link between depression, suicidal ideation, and domestic homicide and that routine screening for IPV be implemented with depressed and suicidal clients in general mental health settings.

There is also a need within the IPV specialist field to develop skills to address concurrent mental health issues and/or for creation of models of collaborative service across mental health and IPV. Specific competencies for identifying and responding to complex co-occurring needs are outlined in the Flourishing Practice model discussed earlier. Service models that bring IPV and mental health services together are also needed. Most developed in this area are models of intervention that address IPV in the context of trauma. A few writers (Augusta-Scott & Dankwort, 2002; Augusta-Scott & Maerz, 2017; Lehman & Simmons, 2009; Taft et al., 2016; Voith et al., 2020) have outlined models of intervention appropriate for use with men who present with both IPV and symptoms of trauma. Across Canada though, due to limitations in programming and in workforce capacity, it is extremely difficult to access either service providers with the expertise to address both IPV and mental health concerns or collaborative programs/services addressing both IPV and mental health needs.

#### *3.4.4. Addressing the Issues of Fathering*

A final underdeveloped area of service is programs that help perpetrators understand the effects of violence on their children and become better fathers. Interventions designed to work with IPV perpetrators as fathers have significant potential to improve collaboration and connection with child protection and other child- and family-focused services, thereby increasing the reach of intervention. Having intervention focused on fathering may also assist with initial engagement and leverage of men's motivation, both of which are consistent challenges for the field (Bourassa et al., 2013; Fleck-Henderson & Areán, 2004; Perel & Peled, 2008; Oliffe et al., 2021). Finally, having programs and services focused on fathering is deemed important by survivors (Westmarland & Kelly, 2012).

There are a number of intervention programs developed specifically to address fathering in the context of IPV (Labarre et al., 2016). Some integrate materials on fathering into existing programs for men who have perpetrated intimate partner violence (e.g., Fathering After

## Secondary and Tertiary Intervention to Address Abuse Perpetration

Violence), some are standalone intervention programs within the IPV specialist service sector (e.g., Caring Dads, Strong Fathers), and some involve integration of IPV programming into non-specialist family-based services, such as supervised visitation centres, support centres for young men, substance use programs, and in-services to incarcerated populations (e.g., Fathers for Change). Interventions for fathers in the context of IPV generally prioritize children’s safety and well-being and recognize that children’s safety is integrally connected to the safety of their mothers. Such programs include reducing men’s abuse of children’s mothers as a core goal. These programs are generally offered collaboratively with IPV services, particularly women’s advocacy services, men’s perpetrator programs, and child protection services and endorse the need for a web of accountability for fathers in which intervention around men’s role as fathers is viewed as one part of an ongoing commitment to monitor, address, and contain risk with men who have perpetrated violence.

#### 4. Engagement and Retention

So far, this report has focused on the characteristics of interventions needed to address abuse perpetration. Equally important in creating a web of accountability is considering how men might be *engaged and retained* in such services – how perpetrators “remain in view.” A few general points from the literature are helpful to frame this section. First, it is important to know that problems with engagement and retention in services to address IPV perpetration are widely acknowledged in the literature, with systematic reviews finding rates of dropout around 20–35%, though some studies report dropout rates of more than 50%, even reaching as high as 78% (Travers et al., 2021; Jewell & Wormith, 2010).

Research has found that some of the problems with engagement and retention relate to internal factors that hinder help-seeking in men. Studies have outlined several barriers to help-seeking, including traditional masculinity (e.g., “I can do it myself”; “this is private”); resistance to engaging (e.g., because of isolation, system blaming, justification, hopelessness, passivity); and minimization/externalization of blame for violence (e.g., “what I did wasn’t so bad, and wouldn’t have been necessary if she had just...”) (Calcia et al., 2021; Campbell et al., 2010; Forsdike et al., 2021; Morgan et al., 2014).

## Secondary and Tertiary Intervention to Address Abuse Perpetration

An equally important concern for engagement is barriers in the system that make it difficult for perpetrators to seek or receive help. In an important early study on this topic, Campbell and colleagues (2010) found that among 57 men who eventually attended a perpetrator program, 63% had previously reached out for help regarding domestic violence, but only 38% had received any help; and of those, and only 27% had found the help offered to be useful or effective. Interviews revealed that the men had wanted to seek help from those they trusted and who would keep information in confidence, but friends, family, doctors, and others who were aware of the violence had avoided saying anything. The result, in the men's retrospective viewpoint, was many missed opportunities to intervene earlier.

This section begins by reviewing research on three aspects of engagement: direct and indirect messaging, persistence and coordination, and the use of motivation-enhancing counselling strategies. It then reviews various models of engagement, starting with efforts to reach men directly and moving to methods of targeted referral through police, addictions, and more general health and social services. Considerations of both individual and system-level barriers to engagement and retention are woven through the current section of the report where possible.

#### **4.1. Direct and Indirect Messaging**

Consideration of barriers to help-seeking have led to debate and sometimes tensions about the types of outreach methods that might be most effective at getting perpetrators to engage with services, in particular, regarding whether to directly mention abuse or to avoid such messaging in favour of a focus on men's stress, distress, and concerns. Notably, there is support for the value of both messaging models. Just as with intervention itself, there is no one-size-fits-all approach to motivating men's voluntary disclosure of IPV and help-seeking behaviours. Having multiple messages and means of engagement will therefore increase service uptake.

Indirect messaging may reduce the likelihood of eliciting men's IPV-related shame and minimization during the outreach/engagement phase. A recent review by Oliffe and colleagues (2021) of men's relationship and IPV programs across Australia, Canada, and the United Kingdom has concluded that high rates of third-party referrals (rather than self-referral) were likely related to men's view of IPV programs as inherently "correctional" in nature. The authors have concluded that the correctional focus of programs on behavioural change likely heightened

### Secondary and Tertiary Intervention to Address Abuse Perpetration

men's feelings of shame and lowered their motivation to self-refer. In other words, more general relationship- or distress-focused messaging may be less likely to trigger men's shame and minimization (e.g., "I'm not abusive/not 'one of those wife-batterers'"), leading to more self-referral.

Other research has highlighted the need for recruitment efforts to focus explicitly on IPV perpetration when seeking to engage men. Research in this domain has found that most men endorse the value of professionals, such as healthcare practitioners, directly asking men about IPV. A survey of over 1 300 men revealed that 65% of male patients thought healthcare professionals should ask directly about IPV perpetration during routine medical appointments if there were signs of potential abuse; 27% supported always asking (Morgan et al., 2014). Similar conclusions were drawn in a study with men in treatment for substance abuse (Hashimoto et al., 2021). In this case, men reported that one reason they had not sought help for or disclosed IPV was because no one asked them about it, suggesting that they may have disclosed the information and been open to support if IPV had been discussed directly. Finally, when men who have received IPV support are asked their opinions on recruiting voluntary involvement in IPV services, they suggested strategies that clearly present IPV problems. For example, the men suggested highlighting specific IPV behaviour in repetitive advertisements that clearly describe/reflect IPV behaviours across the range of intimately violent behaviours (not only physical abuse) while simultaneously being careful not to alienate men by labelling them as abusive or bad (Forsdike et al., 2021).

#### **4.2. Support for Persistence and Coordination**

For IPV perpetrators who are more resistant to accessing intervention, support and coordination may be critical to engagement (Kelly & Westmarland, 2015; Walker & Bowen, 2015). Questions about what is necessary to voluntarily engage high-risk IPV offenders in intervention were explored in a Canadian project called the High-Risk Safety project (Mulrooney, 2020). In this project, police and community-based providers worked together to provide an offer of service to higher-risk offenders as early as possible, ideally when they were awaiting release on bail. Interviews were coded for understanding what it took to engage these men in service. Persistence was an important theme. In interviews, project personnel emphasized that to engage more reluctant men, there often needed to be active, direct, and repeated efforts at engagement over

## Secondary and Tertiary Intervention to Address Abuse Perpetration

time. A quote describing this persistence is below, illustrating how a police manager explained the multiple attempts it took from the police officer associated with the project to get one man to accept referral into the program.

I mean, what it looks like is, so, you know, you go down and you see a guy, and he's in cells, and then, you know, you make the offer [of services] and he blew [the police officer associated with the project] off. Basically said, "Eh, I'm not, go away." I mean, it's a really high-risk kind of guy. No, not interested. She goes back down. He's back in there. You know, a week later, he's breached. He's back in there, and he rolls his eyes, and he goes, "Oh, [expletive]. Not you again." And, she goes, "That's what I was thinking." You know, so, they chat for a few minutes, and he blows her off again, and then the next time, she goes back, and she sees him again, and now he's talking to her ... and, she starts working with him ... then she gets an appointment and now, this time, she's got to pick him up from the shelter where he's living, and drive him to [community service agency], and introduce him (Mulrooney, 2020: p.74).

Another aspect of service deemed critical for successful engagement in the High-Risk Safety project and in other studies of effective intervention with higher risk IPV perpetrators is quick access to service (Gondolf, 2012). In interviews for the High-Risk Safety project, for example, many of the respondents talked about the value of setting up referrals across police and community-based services so that when men were in crisis, there was someone they could reach. "what we know about crisis is it motivates people to make change. They're more open ... and that's been really important in this project" (Mulrooney, 2020: p. 75). Respondents added that being able to provide immediate help with basic needs such as housing, food, and employment was critical to engagement and to creating space for learning. Respondents noted, for example, that "as [men are] starting to feel more comfortable and more positive, some momentum's going, [they're] in a better place to start to really challenge [their] thoughts" (Mulrooney, 2020: p.76).

#### **4.3. Intentional Use of Engagement Methods such as Motivational Interviewing, Narrative Therapy, and Response-Based Approaches**

There is clear and consistent evidence that once men have contacted a service, retention will be improved if engagement is prioritized as part of intervention (Crane & Eckhardt, 2013; Musser et al., 2008; Murphy et al., 2012; Scott et al., 2011; Zalmanowitz et al., 2013). This recommendation is echoed in the competency items of the Flourishing Practice framework. In Canada, there are three prominent theoretical models that help to direct better engagement: motivational interviewing (Scott et al., 2011; Lehmann & Simmons, 2009; Miller & Rollnick, 2012), narrative therapy (Augusta-Scott, 2006; Augusta-Scott, 2017), and response-based

## Secondary and Tertiary Intervention to Address Abuse Perpetration

approaches (Todd et al., 2014). These models share an emphasis on meeting men “where they are at,” being trauma- and violence-informed, exploring and emphasizing context within which abuse takes place, amplifying men’s own discomfort with their abusive behaviours, addressing harmful attitudes about gender, and articulating values as key to motivating change. Research on the value of motivation-enhancing approaches has recently been summarized in a systematic review and meta-analysis by Santirso and colleagues (2020). These authors identified twelve randomized control trials published between 1983 and 2018 that examined the efficacy of interventions for IPV offenders that incorporated motivational strategies. Results indicated that IPV interventions that incorporated motivational strategies were significantly more effective at reducing dropout than interventions without motivational strategies. Specifically, IPV offenders receiving interventions with motivational strategies were 1.73 times less likely to drop out of intervention compared to those in interventions without such strategies. Although effective for retaining men in services, use of motivational strategies was not necessarily related to lower rates of post-program recidivism (Santirso et al., 2020). In other words, use of motivation-enhancing models is a necessary but not sufficient step to promoting change.

#### **4.4. Multiple Routes of Engagement and Entry**

A comprehensive vision of services for IPV perpetrators must also include multiple routes to engagement and entry. Men themselves should be able to find services that address IPV and should be able to self-refer. There should also be clear, well-utilized pathways to referral through police, addictions, and general health services. Finally, workplaces, neighbours, friends, and families should be able to recognize IPV perpetration, be supported in having initial conversations to express their concerns, and should be able to find resources to intervene with individuals in their lives who are causing harm. Considerations and evidence for these various “doors” to service are outlined below.

##### *4.4.1. Broad Efforts to Prompt Men to Self-Refer*

There are several Canadian and international examples of successful attempts to broadly prompt IPV perpetrators to seek help of their own volition. Such efforts have used both direct and indirect messaging. One important Canadian example is Nova Scotia’s Men’s Helpline (MHL). The Men’s Helpline, which was launched in September of 2020, was built on a broader

## Secondary and Tertiary Intervention to Address Abuse Perpetration

foundation of work by the Nova Scotia Department of Community Services and the Standing Together initiative. The helpline uses broad and general outreach messaging (e.g., “Life can be tough. It’s okay for everyone to reach out and ask for help.”) to route men to 211NS and then, as appropriate, to a counsellor at Family Service of Eastern Nova Scotia. Counsellors are available 24/7 to provide single session counselling and/or to make referrals to short-term counselling at local service agencies. An evaluation of the initial six months of implementation found high uptake of the service: between September 2020 and March of 2021, the MHL responded to 794 calls from approximately 278 unique callers (Scott et al., 2021). Men most often presented with needs related to mental health, stress, and anxiety but also called because of concerns in their relationships, including separation, anger, conflict, and violence. Men often called the line multiple times for support. From patterns of service usage, it appears that most prefer this “on-demand” model of service access over one that links them to short-term counselling services, which were taken up by relatively few callers. Another broad service recently launched in Canada is Men&. This service, which also uses broad and general messaging, has seen high levels of uptake by men.

Other examples of broad outreach that uses messaging to directly target IPV include the Men’s Referral Service in Australia and the Respect Phonenumber in the UK.<sup>4</sup> These are both well-established national phone/text lines advertised as sources of support for men to get advice about abusive and violent behaviour. Another example of a line directly advertised as addressing domestic violence was the Men’s Domestic Abuse Check Up in the US (now no longer operating). This line directly invited men to reach out due to concerns about their potential abuse in relationships. Research on the efficacy of this line with men presenting with both IPV and substance use found that the line’s use of a motivational enhancement messaging resulted in greater motivation for treatment-seeking and a greater reduction in self-reported IPV (Mbilinyi et al., 2008; Mbilinyi et al., 2011).

Finally, a number of organizations have created broadly available online, self-directed services aimed at anger management, relationship education, and preventing IPV. Examples are

---

## Secondary and Tertiary Intervention to Address Abuse Perpetration

ePREP, OurRelationship, and BETTER MAN.<sup>5</sup> Messaging for these programs is often focused on improving relationship skills and communication. For example, BETTER MAN aims to help men identify areas where they may need help with in their intimate relationships and to take positive action (<https://www.saferfamilies.org.au/betterman>). Recently, Spencer and colleagues (2021) conducted a meta-analysis of the impact of these online self-directed programs. Results, based on six randomized control studies with a combined total of 1847 participants, showed that online relationship education and anger management programs had large effects on decreasing levels of depression, medium effects on decreasing levels of anger, and medium effects on self-reported emotional and physical IPV perpetration.

#### 4.4.2. Outreach through Police Services

As described earlier, most IPV perpetrator interventions in Canada serve men who are referred through the justice system either as a condition of probation or through an early intervention/diversion model in which sentencing or rulings on a person charged with an IPV offence is attached to their participation (and sometimes progress) through an IPV intervention program. Beyond these routes, there are a variety of ways that police may engage in targeted outreach and referral for IPV perpetrators. Examples include “secondary responder” models (most often applied to supporting victims but sometimes applied to perpetrators) strategies of “focused deterrence” (which tend to put more weight on community messaging), and restorative justice. Common features of such models, as applied to IPV, include:

- Mobilization of community knowledge and services to help target and address the problem;
- Organization/running by an inter-agency group, including police/corrections and community-based services;
- Direct communication with those who are at high risk of offending to share information on risk, express concern, alert them to the seriousness and potential consequences of their behaviours and situation, and offer support services to help change behaviour;
- Parallel outreach response to victims to assess their safety, provide information, and offer support services.

<sup>5</sup> ePREP is available at <https://lovetakeslearning.com/>, OurRelationship is available at <https://www.ourrelationship.com/> and there is a new site currently under development for BETTERMAN, see <https://www.saferfamilies.org.au/betterman> for details.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

One better known American program involving police outreach is the Offender Focused Domestic Violence Initiative (OFDVI) in North Carolina (Sechrist & Weil 2018; Sechrist et al., 2016). This program, based on theories of focused deterrence, assumes that offending will be reduced when clear information is presented to offenders about the criminal and moral consequences of their decisions, when offenders are allowed to make a rational choice based on this information, and when community resources are provided that may assist them in stopping their criminal or violent activity. A tiered (A to D) approach is used to direct response to perpetrators of IPV with varying histories. For each tier, targeted messages and service responses are delivered. For example, B-level offenders (those with a previous history of charges) meet face-to-face with a member of the police service, are given a personalized description of their criminal history and legal exposures, are offered opportunities for services, and are given a message from the community that IPV will no longer be tolerated. The specific messages woven through all responses are: domestic violence affects everyone, not just you and your partner; violence and abuse is wrong and is not consistent with our community values – the community condemns your behaviour in the strongest terms; the community cares about what happens to you and wants to help you, but if you reoffend, the community stands behind the police and supports them to protect victims from further violence (Sechrist & Weil 2018; Sechrist et al., 2016). Research on the effectiveness of this model has found that over one year, it reduced the volume of IPV-related calls for service by approximately 20%, reduced the volume of IPV-related arrests by approximately 20%, and reduced the victim injury percentage documented in IPV arrests from 67% to 47%. The project also reported a one-year IPV offender recidivism rate of 16–17%, which is considerably lower than what is typically found in police data. These results are consistent with other meta-analytic work concluding that focused deterrence strategies are effective, at least in the short term (Braga & Weisburd, 2012; Abt & Winship, 2016). Longer-term effectiveness and the specific value of moral messaging have been more contested (see, e.g., Braga & Winship, 2006; Rosenfeld et al., 2005; Wellford et al., 2005). The emphasis of this model on moral messaging and its associated lack of intersectional analysis is also problematic when considered from an intersectional perspective. A more appropriate application of a model like this in Canada may be to omit moral messaging and build out partnerships and supports with multiple diverse, community-based services.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

There have been a few Canadian programs and projects that similarly used collaborative police–community-based models to promote engagement of perpetrators with intervention. One was coordinated in Sudbury, a smaller city in northeastern Ontario. In the mid-2010s, the local coordinating committee received funding to develop and pilot an Innovative Continuum of Services (ICS-DV) response for abusive men. An interagency collaborative initiative formed to identify, develop, and deliver a continuum of preventative intervention services that included existing justice pathways (referral through probation and as part of deferred sentencing) and two new pathways. The first, called the Before Everything Escalates Program (BEEP), was designed for men who came to the attention of the system, often because of a “domestic disturbance” call to police, but who had not been criminally charged. These men were offered the opportunity to participate in the thirteen-week BEEP program, which consisted of an intake assessment and a group-based intervention covering male socialization; the abuse cycle; negative, irrational, and distorted thinking; effective communication; managing emotions; problem-solving; healthy relationships; parenting; and self-care. The second pathway was a domestic violence bail court outreach program that provided crisis counseling and referral services for men arrested and facing domestic violence charges. The bail outreach risk management counseling service provided “bridging” intervention for those falling between program offerings, similar to the High-Risk Safety project (described below). Although recidivism results are not available for the Sudbury program, it did show proof of concept for a continuum of outreach to offenders who would not normally be engaged in services, with 56 men identified as appropriate for BEEP and 31 men receiving at least one session of risk management counseling services (Langer, 2017). Collaboration members also reported building stronger relationships across agencies and greater capacity to identify and address gaps in services (Langer, 2017).

A second Canadian project that linked police and community service providers to facilitate access to intervention was the High-Risk Safety project run out of London, Ontario (Scott, Heslop et al., 2017). This project was aimed at perpetrators farther “downstream” in the justice program. Described as a “second-responder” program, this project was designed to fill the gap in service for offenders charged with domestic violence, deemed at moderate to high risk for reoffending, who were being released on bail and waiting appearance in court for charges (typically six months or a year later). Perpetrators were contacted by a police-based clinician and invited to attend a community-based intervention. Over the four-month period of the study,

## Secondary and Tertiary Intervention to Address Abuse Perpetration

successful phone contact was made by a police-based clinician with 63 men, 76% of whom agreed to a referral. Men in the intervention condition attended individual appointments with therapists at a community-based service provider specializing in work with men who have perpetrated domestic violence. Contact was focused on identifying and addressing dynamic risks for domestic violence perpetration. The types of services provided to participants included linking to community resources (such as housing and legal advice) for practical assistance, referral to addictions and mental health services, practical support such as accompanying men to a food bank or shelter, and short-term cognitive-behavioural therapy (CBT) to address abuse-supporting cognitions. In addition to these services, partners of men in both the intervention and comparison groups received support through an established second-responder program for victims of domestic violence.

A quasi-experimental design was used to compare police outcomes for 40 men attending a second-responder intervention program to 40 men with equivalent levels of risk for re-offense who did not attend intervention. Results showed that there were significant, substantial, and lasting differences across groups in all outcome domains. In terms of recidivism, rates of subsequent domestic-violence-related changes were more than double for men in the comparison group as compared with the intervention group in both one-year (65.9% versus 29.3%) and two-year (41.5% versus 12.2%) follow-up (Scott, Heslop et al., 2017). Changes in the rates of arrest were consistent with reductions in men's general involvement with police, with men in the intervention group receiving fewer charges for violent offenses, administrative offenses, and property offenses over the two years following intervention than men in the comparison group.

Despite positive outcomes in both the ICS-DV and the High-Risk Safety project, as well as evidence from other jurisdictions of the value of approaches that promote referral by police, both of these programs were offered as pilot projects and neither were continued or expanded to other jurisdictions.

#### *4.4.3. Outreach through Programs for Substance Use*

A second critical point of collaboration and outreach is through programs for substance abuse. As already mentioned, substance use is a major co-occurring problem with IPV, and there is empirical support for providing integrated addictions and IPV services. Recognizing the importance of co-occurring problems, the Substance Abuse and Mental Health Services

## Secondary and Tertiary Intervention to Address Abuse Perpetration

Administration of the US Department of Health and Human Services (SAMHSA) has since 1997 recommended that: 1) substance abuse programs consistently screen all clients for current and past domestic violence, including childhood physical and sexual abuse; 2) that there be formal linkages between substance abuse treatment programs and domestic violence programs; and 3) that there be investment in a model for systemic reform to a coordinated system of risk management and care (SAMHSA, 1997).

Unfortunately, these recommendations are rarely put in place. As described earlier, the one Canadian program that provided combined IPV and substance use programming (Sobering Effect, Tutty et al. 2011) is no longer running. There is also limited collaboration and cross-referral from addictions to IPV services. Reviews of practice across North America document that few substance use treatment programs have had a policy requiring assessment of potential clients or monitoring of admitted clients for violence perpetration; very few see their work as contributing to assessing, monitoring, or managing risk for IPV; and many have identified as a barrier a lack of staff training in IPV (Timko et al., 2012; Hashimoto, 2021). Recent qualitative studies have echoed and expanded on these findings, documenting staff training issues and contextual challenges around acceptance of IPV treatment implementation within substance abuse treatment (Gilchrist et al., 2019). Development of combined and integrated services for IPV and substance abuse requires training in both sectors. Moreover, the internal design and contextual settings of these programs must be considered, including how coordinated service pathways can be set up and maintained.

#### *4.4.4. Outreach through Health, Mental Health, and Social Service Providers*

A fourth area of targeted outreach should be through general health, mental health, and social service providers. One of the most common and repeated recommendations made following reviews of IPV-related homicides is that all health and social service providers should have the capacity to recognize IPV perpetration, to initiate conversation about concerning behaviours and to make referrals to services (Scott, Oliver & Cheng, 2020). Extant research clearly suggests both that general service providers seldom engage men in conversations about IPV and that general health providers are unprepared for these conversations. For example, a recent study of general medical practitioners' experiences of working with male patients who have perpetrated IPV found that the practitioners were inexperienced and unprepared to identify IPV perpetration

## Secondary and Tertiary Intervention to Address Abuse Perpetration

and to respond to this perpetration (Mousaco et al., 2019). Furthermore, physicians expressed concern that raising the topic of IPV would harm the therapeutic relationship with their patients (Mousaco et al., 2019). These concerns are echoed in other research with physicians: even experienced physicians do not believe they have the knowledge or skill to ask about or address IPV perpetration and have highlight their lack of training and knowledge (Penti et al., 2017; Portnoy et al., 2020). Lack of knowledge and training includes lack of knowledge regarding where to refer perpetrators for service and sometimes results in physicians making inappropriate referrals (e.g., to marriage counselling) or trying to address the issue themselves, both of which are potentially unsafe (Penti et al., 2017). Similar themes have emerged in research with other practitioners, including nurses and pharmacists (Barnard et al., 2013; Yonaka et al., 2007).

There has also been relatively little research on what it might take to change the response of generalist providers to patients/clients who have perpetrated abuse. In one of few studies on this issue, Williamson and colleagues (2015) studied the feasibility of a brief (two-hour) practice-based training to improve the response to male patients who have experienced or perpetrated domestic violence and abuse. Results showed a significant increase in clinicians' self-reported preparedness to meet the needs of male patients experiencing or perpetrating IPV, though there were only small increases in male patients identified and referred to services, leading the authors to suggest that more research is needed to facilitate case identification.

*4.4.5. Outreach through Workplaces*

Change in workplace legislation provide another general route to recognizing and responding to concerns about abuse perpetration – opening an additional “door” into a web of accountability. Over the past few years, Canada has made extensive use of occupational health and safety legislation to explicitly outline employer responsibilities for preventing and responding to IPV in the workplace, though most provisions focus on response to victims. In Nova Scotia, for example, the Labour Standards Code obligates employers to allow employees who have experienced domestic violence to take three days of paid leave (Province of Nova Scotia, 2022).

Creating strategies of intervention and routes of response to IPV through workplaces has clear potential benefits (Galvez et al., 2011; Lim et al., 2004; Mankowski et al., 2013; Rothman & Corso, 2008; Rothman & Perry, 2004). Exploring this issue, the DV@Work network funded an Ontario-based survey of the impact of IPV perpetration on workers and workplaces. Results,

## Secondary and Tertiary Intervention to Address Abuse Perpetration

based on responses from almost 500 men attending an IPV intervention program, found that IPV perpetration persists into the workplace (Scott, Lim et al., 2017). Specifically, around one third of IPV perpetrators were in contact with their (ex)partner during work hours to engage in behaviours that were abusive, often through phone calls and messages but sometimes by “dropping by” the home or workplace of their (ex)partner during work hours. Results also found that IPV perpetration impacted job performance. About one tenth (9%) of respondents reported that they caused or almost caused a work accident as a result of being distracted or preoccupied by IPV issues, and close to half of respondents (45%) reported that IPV issues at least sometimes affected their job performance. Most respondents felt workplaces should be involved in addressing IPV issues, pointing out that workers and workplaces need to be able to recognize controlling, degrading, emotionally, and physically abusive behaviours, have skills to speak out against these behaviors, and have programs and policies in place that can prevent and respond to those perpetrating abuse.

Resources in support of training, policy development, and responding to IPV in the workplace are now increasingly available. Two options are the online DVatWork resources provided by CREVAWC and resources offered by the Muriel McQueen Fergusson Workplace Violence and Abuse Research Team.<sup>6</sup> Although there is considerable promise in workplaces as partners in the prevention of and response to domestic violence, this work is still in its infancy, and there is much more still to be done. Even large and better resourced employers are still only starting to name domestic violence in their workplace violence policies, to provide preventative resources, and/or to create clear routes of response. It is also worthwhile to note that most of the current resources assume or are best suited to situations in which there is a direct and consistent relationship between employers and employees. There are, however, a large range of workers for whom different ways of responding may need to be considered. These include self-employed contractors, seasonal workers, and franchise owners. To date much less work has been done on how to address IPV perpetration within these work settings. This is an important area of future development: in the survey discussed earlier on the impact of IPV perpetration in the workplace, one third of respondents reported being employed casually, seasonally, or on a temporary contract, and 14% reported being self-employed (Scott, Lim et al., 2017).

---

## Secondary and Tertiary Intervention to Address Abuse Perpetration

**4.5. Support for Neighbours, Friends, and Families**

When men are asked about help-seeking, they typically report being most likely to seek from informal sources (e.g., family and friends; Campbell et al., 2010; Hashimoto et al. 2021). There are calls to continue broad public education around IPV and for easily found information on how and where to refer IPV perpetrators to services. As part of the Standing Together to Prevent Domestic Violence initiative, a number of Nova Scotia ministries are working together, with coordination through the Advisory Council on the Status of Women, to expand public education for victims and perpetrators, as well as friends, families, and neighbours.<sup>7</sup> There is a focus on ensuring that such initiatives recognize the diverse nature of domestic violence and reach rural communities and African Nova Scotians (<https://women.novascotia.ca/womens-safety/safety-planning>). It is important, in developing these messages, to recognize that people are often hesitant to get involved, and they often worry that they may make things worse (McMahon & Dick, 2011; Mousaco et al., 2019). Having supports for neighbours, friends, and family members to have conversations about IPV perpetration is critical. It is also important that those looking for services for IPV perpetrators be easily able to find resources. Nova Scotia currently lists its men’s programs online, which is helpful but potentially not easily found. For example, there is no way to easily search for perpetrator programs in 211 NS’s “violence and abuse” section; and Nova Scotia’s online mental health service directory<sup>8</sup> has no option or way to search for programs that might address IPV. To be clear, this is not a problem that is specific to Nova Scotia. The lack of clear availability of information about programs for IPV perpetration is a problem across Canada. It is for this reason that the work currently being undertaken by Women’s Shelter Canada to create a listing of programs that address IPV perpetration is so critical. It will then be important for this information to be widely spread.

**5. Conclusions and Recommendations**

At its onset, this report set out to describe an overall vision of a response to IPV perpetrators that would join communities together in creating a web of accountability to keep perpetrators in view while working to ensure survivor safety. An essential part of this system is services that are

<sup>7</sup> See the NS government webpage “Standing Together to Prevent Domestic Violence,” <https://novascotia.ca/standingtogether/>.

<sup>8</sup> See the NS health website, <https://mha.nshealth.ca/en>.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

feminist, intersectional, and culturally appropriate. Creating such systems will require investment in IPV specialist services and shifts in the ways in which systems such as police, child protection, and mental health and addictions services recognize and respond to abuse perpetrators. To the extent that we can intervene earlier to end abuse, the potential return is a reduction in human suffering and loss of life, as well as significant cost savings to society. Specific recommendations based on research outlined in this report follow.

### **5.1. Recommendations for Interventions to Address Abuse Perpetration**

1. Provide adequate funding for services aimed at addressing abuse perpetration. Services should have sufficient funds to respond immediately with risk management services, to offer a range of intervention options to address abuse perpetration, to engage in preventative public education, and to collaborate within collaborative multi-agency responses.
2. Go beyond “one size fits all” with a variety of group-based interventions augmented with individual case management to assess and manage risk and to supplement services as needed to address individual needs. Services should combine individual and group work. A priority is for the development of cross-agency/cross-system collaborative services and service models in the areas of: a) substance abuse; b) general criminal behaviour; c) mental health; and d) fathering.
3. Invest in high-quality program evaluation and research to examine the success of more individualized and targeted intervention approaches for IPV perpetrators. Research should include feedback from partners as part of assessing outcomes and should consider rates of engagement and retention as important secondary variables. Collaborative meetings that bring together researchers actively engaged in studying perpetrator interventions will enhance research and knowledge mobilization.
4. Recognize the specialized knowledge and expertise of service providers providing IPV perpetrator intervention and support the development of workforce capacity within the sector. Service contracts should include funding for supervision and ongoing professional development. Consideration may also be given to creating competency-based training opportunities that would be available to all service providers to IPV perpetrators.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

5. To increase acceptability and access to IPV perpetrator services, continue to engage in collaborative work with culturally diverse Nova Scotians to identify priorities for investment in IPV perpetrator services at agencies led by and connected to specific cultural communities. There should also be continued promotion of widespread recognition within all agencies of the importance of centering the diverse cultures and identities of IPV perpetrators.

**5.2. Recommendations for Engaging Perpetrators**

1. Engage men with both indirect and direct messaging about abuse. Investment in services like the Men's Helpline (general access with indirect messaging) should continue. Attention should also be paid to direct messaging about IPV perpetration. For example, it is important to consider how a Nova Scotian concerned about IPV perpetration may find information and services appropriate for addressing abuse.
2. Create opportunities and pathways to service access through the police. Police-based referrals should be provided as early as possible and should be repeatedly and persistently offered both as a route to engagement and as a way to reinforce the need for perpetrators to be accountable for their abusive behaviours.
3. Substantially improve the coordination of services addressing IPV perpetration and substance use. Address barriers to referral within services for individuals using substances, create opportunities and pathways to services, and encourage cross-agency service provision and case management.
4. Include professional education on IPV perpetration as part of initial and ongoing training for providers of health, mental health, child and family, and social services. Such learning needs to include recognition of IPV and how to respond and refer individuals who may be perpetrating abusive behaviours.
5. Create public education campaigns that address IPV. These messages should promote broad recognition of risk factors and warning signs of IPV. They should be accessible in multiple languages and in multiple formats. Messages should include men's voices, represent men's experiences, and promote help-seeking. They should profile "opening the door" to conversations about behaviours of concern.

## Secondary and Tertiary Intervention to Address Abuse Perpetration

6. Continue to recognize workplaces as a key location for recognizing and responding to IPV perpetration. Continue to promote and support training within workplaces on recognizing and responding to IPV. Expand discussion of IPV as a workplace issue within a broader range of workplaces and with additional workers. Specific consideration needs to be given to the responsibilities and responses of employers of seasonal and contract workers. There is also a need to consider policies, provisions, and training that might be needed within franchises and for self-employed workers who are required to regularly renew licences and certificates to continue to practice.

A Systematic Review of Research on Rural Policing

## **I. Scope and Limitations**

This report sets out the core themes of research on rural and remote policing and indicates how they may apply to the interests of the Mass Casualty Commission. This section sets out the terms of reference, limitations, methodology, and research drawn upon as a context for understanding what follows.

### **1. Understanding Rurality**

While this report is concerned with rural and remote policing and police–community relations in rural areas, the meaning and definition of rurality is contentious (see Halfacree 1993; Reimer & Bollman 2010). It is both a geographical concept, describing socio-spatial characteristics that differentiate rural areas from others, and a socio-cultural concept, describing social, economic, and cultural aspects of rural societies. It is also a social construction, reflecting local histories, institutions, and identities, and the experiences and interpretations of individuals who consider themselves to be rural. Finally, it incorporates a series of rhetorical ideas about a way of life, sometimes described as a “rural idyll,” that imagines cohesive, safe, and homogenous communities in contrast to diverse, modern urban spaces characterized by conflict (Ceccato 2016; Mawby 2003).

The scope of this report is delineated by research that describes its concerns or context as “rural.” However, the understanding of “rural” differs between studies and incorporates elements of all the themes described above. Further, it is important to recognize there is no singular rural experience. Rural police research includes a wide range of diverse contexts, from remote islands to “outback” areas, sizeable small towns, and areas broadly defined as “non-metropolitan” or

poorly defined altogether. (The Appendix contains a summary list of the types of rurality described in the studies that are cited in this report.) Areas of similar size or geographical characteristics may be markedly different due to different socio-economic, historical, and cultural contexts, and there may be a wide diversity in the experience of rural community life for individuals or groups within it. It is important to recognize that findings in one rural area cannot simply be transposed into another context.

Recognizing this important diversity of experience, this report draws out common issues in the research that relate to the rural experience. The following broad characteristics of rurality are particularly important in understanding the issues presented in the research:

- **Population size and density:** Research is concerned with areas outside metropolitan population centres, which are smaller in size and less densely populated than urban areas.
- **Proximity and access:** Discussions of proximity include both issues of physical distance and mobility, and access to services such as police, health and social services, and social supports, as well as access to labour markets. These issues are frequently expressed in terms of isolation.
- **Socio-cultural context:** Rurality is frequently defined through a distinctive form of community life, characterized in particular by ideas of familiarity and lack of anonymity, cohesion and closeness, and a sense of community (see section V).
- **Marginalization:** Rural communities are often seen as neglected or subordinate to larger population centres. A common theme is a lack of attention to or understanding of the needs of communities or of the police officers who work within them, and a subordination of the policy or resource needs of rural areas to those of cities. Some research explores an association between rurality and social deprivation, including inequality of income, health outcomes, or other indicators of community well-being, including crime.
- **Structure of police services:** The distinctiveness of the structure and work of police services within rural areas is often implicitly seen as an identifying feature of rurality (see section IV).

These themes are likely to be salient to all rural police areas, though the extent of their importance may differ according to context.

## A Systematic Review of Research on Rural Policing

**2. Methodology and Sources**

This report draws primarily on research on remote and rural policing. Despite a rich tradition of police scholarship, studies of rural policing remain relatively rare. However, over the last two decades there has been increasing interest in rural police research, especially in Australia, Canada, the United States, and the United Kingdom. The scope and methodologies of selected studies used in this review are summarized in the Appendix to this report. As the Appendix shows, with a few exceptions (e.g., Cain 1973; Souhami 2020; Souhami 2022), most rural police research is small-scale and makes use of interviews, surveys, secondary data analysis, or mixed methodologies. Further, most research focuses primarily on the work of policing and therefore generally excludes those rural areas where there is no physical police presence—increasingly a feature of remote rural areas, as isolated police stations close (see section II). To address this gap, section V draws largely from my own recent research on rural police work within the wider experience and structures of community life in Scottish islands (Souhami 2020; Souhami 2022). This is the only study which explores rural police work within the wider experience and structures of community life.

This report focuses primarily on formal police services. However, it is important to note that the police are only one of many agencies that do policing, including other state agencies that are broadly involved in social control (such as social workers and probation or education agencies), forms of privatized security, and other law enforcement agencies. Discussion of the operation of these is outside the scope of this report. Notably, however, residents themselves are also involved in “policing” the communities in which they live, and this topic is explored in section IV.

A review can never be exhaustive, and there will inevitably be omissions. The citations of texts here aim to give as comprehensive an understanding as possible of core issues in the field.

## A Systematic Review of Research on Rural Policing

Research has been identified through social science databases, electronic library catalogues, and Google Scholar, and by cross-referencing with key journal articles. This review includes only peer-reviewed scholarly literature (excluding, for example, unpublished dissertations), in addition to notable monographs and edited collections. It also includes only research published in English. Consequently, it prioritizes research in countries where English is an official or primary language. However, as English remains the principal language of international scientific journals, this reflects the orientation of published research in general.

As discussed in section III, much research emphasizes the distinctiveness of remote and rural policing, but there is in fact considerable continuity between city and rural police work. This report therefore also draws on foundational works in wider policing scholarship to illuminate both the continuities and distinctive issues experienced by rural officers.

## **II. Locating Rural Police Work: Centralization and Localism**

A core theme throughout the studies cited in this report is the distinctiveness of rural policing. Research has explored the differences of rural policing to mainstream urban services; the specific needs and challenges of rural officers; the skills and resources required to police rural communities; and the question of who should be responsible for their policing. One of the framing issues for these questions is the location of rural police services: whether they should be delivered through local or regional police teams or absorbed into a larger, centralized service. This section sets the structural context for rural policing and the core arguments about centralization and localism that frame the provision of rural police services.

The arrangements for policing rural areas vary significantly internationally, reflecting local political, geographical, and historical contexts, including levels and sources of funding, which have shaped the development of police services. Mawby (2016) has identified three broad

## A Systematic Review of Research on Rural Policing

models of the principal mode of delivery of rural policing. First, in some countries, such as the United States, rural policing is delivered by small, autonomous local police services, organized at the “small town” level. Second, in areas such as Australia, England, and Wales, policing is organized regionally with separate police services responsible for different states or counties. Third, in countries such as New Zealand, France, and Canada, rural policing is principally delivered through centralized or federal police services. These broad models are in practice more complex: “rural” regional police services are likely to incorporate elements of both urban and rural areas; “local” police services run alongside multiple police services organized at the federal or state level; and centralized systems may also have regional provision. This is the case in Canada, where a federal agency, the RCMP, is responsible for a significant proportion of rural policing, but regional policing is also delivered by provincial, municipal, and some First Nations police services.<sup>1</sup>

A core issue in the organization of rural policing in all these arrangements is the balance between local autonomy and the centralization of services, and the consequences for service delivery. In particular, there are longstanding concerns that the organization of police services at a larger, centralised level may have a detrimental effect on the ability of services to respond to distinctive local needs (see, e.g., Mendel et al 2017). This issue is particularly important in relation to rural policing, as research has consistently shown the particular importance of local relationships and situated knowledge in establishing trust and legitimacy in rural areas (see Cain 1973; Fenwick 2015; Rantatalo et al 2021; Wooff 2017; and further discussion below).

---

<sup>1</sup> For discussion of the First Nations Policing Programme and the specific issues around policing in Indigenous communities, see Kiedrowski et al 2017; Ruddell & Jones 2020.

The diversity of local contexts makes the comparison of efficacy of different models difficult (Mendel et al 2017). However, the potential benefits and risks of centralized services have recently been illuminated in debates about the centralization of regional services in some European countries, including Austria, Denmark, Finland, the Netherlands, Norway, Sweden, and Scotland. In particular, Scotland and the Netherlands have recently amalgamated all regional services into a central, national police service (Cameron 2017; Holmberg 2014; Lindström 2015; Mendel et al 2017; Terpstra & Fyfe 2015). The drive for reform of police services in these different contexts has been similar: centralization is argued to promote the performance and efficiency of services, enhance the response to transnational crime, and allow national governments more power over the police (Terpstra & Fyfe 2015: 528)—although evidence regarding all these claims is mixed (see Holmberg 2014; Mendel et al 2017; Terpstra & Fyfe 2015). While these discussions about are not specifically directed to rural policing, they illuminate both the advantages and risks of centralized services for policing in rural areas.

### **1. Advantages and Risks of Centralized Services**

Arguments in support of the amalgamation of regional police services indicate that centralization may have benefits for rural police services. First, due to economies of scale, centralized services are more cost efficient (Cameron 2017; Terpstra & Fyfe 2015). Second, smaller services such as those in rural areas may not be able to maintain the range of skills necessary in all their areas of activity, especially those requiring considerable resources and specialist skills (see, e.g., Rantatalo et al 2021 for discussion of problems of specialism in Sweden). Larger services allow for a greater number of employees with specialist skills, ensuring competence across the organization. Third, larger services allow more flexibility to move officers to incidents that require a large police presence (Mendel et al 2017). Fourth, findings by Mendel et al (2017)

## A Systematic Review of Research on Rural Policing

suggest that centralized services may in some circumstances allow for more unified procedures for dealing with major incidents such as terrorist attacks, in a way that small police services—such as American “small-town” policing—cannot. However, Mendel et al (2017) have also noted that most larger regional forces do have capacity for managing such incidents. Fifth, where local incidents have transnational or international elements, a fit with the structure of centralized and international crime agencies such as those dealing with national and international organized crime facilitates cooperation.

Despite these benefits, the centralized organization of police services presents a number of risks for rural policing.

#### *A. Local Policing*

The principal concern for the delivery of policing in rural areas is that centralized police services erode local (sometimes known as “proximity” or “neighbourhood”) policing. Such a model risks distancing officers from the communities they serve and undermining local knowledge, responsiveness to community needs, and policing strategies tailored to local areas.

It is important to note that such effects are not inevitable in centralized services: Mendel et al (2017) have argued that local policing strategies are possible alongside a wide variety of force structures, and a force with “ample numbers of well-resourced, highly-skilled, highly-capable and well-managed local officers could offer a good service even if it covers a large area” (8). However, in practice, regional services that have been merged into national police forces show a decline in local policing. Research in Sweden, Norway, Denmark, Scotland, and the Netherlands shows that the merging of police districts has reduced local police presence, led to areas being policed by officers with little local knowledge, produced more hierarchical and centralized police service, and led the police to be seen by locals as less visible, less effective,

## A Systematic Review of Research on Rural Policing

and less available locally (Holmberg 2014; Cameron 2017; Terpstra and Fyfe 2015). Moreover, Swedish research has shown that due to the costs of policing large rural areas, centralization has not increased police numbers in these areas (Cameron 2017). Further, rather than leading to more support, local numbers are frequently reduced, as officers are away to assist with incidents elsewhere. As specialist units are drawn away from rural areas, officers in rural areas who wish to be promoted may feel they need to serve in these units to do so, which requires their removal from the community. Consequently, officers are incentivized to neglect local policing, risking a loss of competence in local areas (Cameron 2017; Mendel et al 2017).

*B. Policing Priorities*

A further tension is that centralized forces provide funding and set policy objectives and police priorities. For example, as Buttle et al (2010) have noted in relation to New Zealand, even though rural district commanders may have considerable discretion, funding and priorities are set by the Wellington-based central command structure. This presents two important risks for rural police services. First, it erodes the local autonomy and context-specific decision-making that are central to “soft” policing styles in rural areas (Wooff 2017; Terpstra & Fyfe 2015; and see section IV). Second, it represents a “one-size-fits-all” approach to police styles and objectives that cannot accommodate the different needs of rural areas. Moreover, centralized priorities are usually based on the needs of larger, urban services, which have higher populations and crime rates, more resources and are consequently more powerful. As a result, centrally defined objectives may be unresponsive to or even undermine the needs of local areas. For example, in Scotland a national priority targeting violent crime has led to the displacement of other local priorities, especially in relation to property crime (Terpstra & Fyfe 2017). This approach is particularly problematic when it is reinforced, as in Scotland, by national performance

## A Systematic Review of Research on Rural Policing

management models based around a range of key performance targets that direct police practice on the ground. Where such performance targets are created centrally, they risk having less connection to local needs than if they were locally determined.

*C. Urban and Rural Police Styles*

A particular concern about urban-focused strategies is that they may conflict with the “soft” policing styles required in rural areas (Wooff 2017), which prioritize de-escalation and under-enforcement of the law, as described in sections III and IV below. For example, the national performance management framework embedded in the new national police service in Scotland directs police activity towards the detection of crimes of high volume such as vehicle offences and the prolific use of strategies such as stop and search. This is widely seen to encapsulate a strategy of “enforcement”—the prominent recourse to arrest or other enforcement measures, typical of city policing (see Fyfe 2014; Wooff 2017)—which does not meet the needs of Scotland’s extensive rural and remote areas (Souhami 2020).

*D. Resource Allocation*

Models of resource allocation in centralized services are often based on assumptions of urban contexts and unable to take into account the particular conditions of rural policing. Ricciardelli’s research in Canada (2018) has described how allocations of resources may be based on factors such as the number of residents, minimum staffing projections, or workload. Consequently, due to lower population density and lower volume of crime, rural areas receive fewer resources (Rantatalo et al 2021; Ricciardelli 2018). Yet these calculations do not take into account the size of the service area, the distance and time required for travel, or the myriad non-crime related functions the police perform that markedly impact on the resilience of rural services (see section IV below). Indeed, Rantatalo et al (2021) have argued that this mismatch creates a ‘rural

paradox' (1358): despite the smaller numbers of reported crimes, rural areas need more staff on average than urban areas rather than fewer.

Further, research in Canada, the United Kingdom, and Sweden has shown a trend towards the closure of smaller police stations (see, e.g., Yarwood & Wooff 2016; Ruddell & Jones 2020; Rantatalo et al 2021; Smith & Somerville 2013; Lindström 2015). This has concentrated the police in population centres, whether in urban areas or rural towns, leaving isolated areas without any physical police presence at all. Again, this impedes police knowledge of the area and creates barriers to establishing relationships with local communities.

Rural areas may also receive inadequate physical equipment, and as Ricciardelli (2018) has noted, shortages or poor quality of vehicles and equipment affect the efficacy and safety of rural officers even more than they do officers in urban areas.

## **2. Summary and Implications**

The location of rural police work can have significant implications for the priorities, resources, autonomy, and needs in the delivery of police services. It is important to note that it is not inevitable that centralized services will have a detrimental effect on the needs of rural police services or the communities they support, and there are advantages in economies of scale. However, the particular conditions of rural police work must be taken into account in the creation of centralized policies. In particular, it is important that these conditions are taken into account in the allocation of resources; that police strategies do not erode local knowledge and community relationships; that officers are able to retain discretion and autonomy given their centrality to rural policing styles; and crucially, that urban assumptions of the culture and priorities of policing are not imposed through a “one-size-fits-all” approach to policy and practice.

A Systematic Review of Research on Rural Policing

### **III. Understanding the Role and Culture of the Police**

The previous section described how what the police actually do may be strongly shaped by organizational pressures such as central priorities, funding, and the allocation of resources. However, police work is also shaped by deeply embedded, cultural ideas of what policing is. This section briefly outlines foundational ideas about the role and culture of the police in order to contextualize the specific challenges identified in the rest of this report.

A common theme of rural police research is the distinctiveness of the styles and skills of policing that are developed in response to the local context (see, e.g., Cain 1973; Falcone et al 2002; Griffiths 2019; Liederbach & Frank 2003; Putt 2011; Ruddell & Jones 2020; Weisheit et al 1994; Weisheit et al 2005; Wooff 2015; Wooff 2017). In particular, as will be discussed in section IV, research has explored how rural police work requires officers to employ a form of “soft” policing (Wooff 2017) that prioritizes discretion, sensitivity, and responsiveness to the needs of the community, transparency, and under-enforcement of the law. However, foundational police scholarship (e.g., Banton 1964; Bittner 1967; Bittner 1970; Bittner 1974; Cain 1973; Punch 1979; Wilson 1968) has suggested that these elements of police work are not intrinsically distinctive to rural policing but are core elements of the police role. This section explores how the apparently different styles of rural and urban police work arise instead from tensions between the cultural pressures within the police organisation and the different demands of urban and rural contexts.

#### **1. The Role and Function of the Police**

Classic police scholarship identifies three elements of the police role and function that are particularly useful for this discussion.

*A. Law Enforcement and Peacekeeping*

First, police scholarship has long identified two key elements of the police role: “law enforcement” and “peacekeeping.” Both these roles derive from the capacity of the police to use force on behalf of the state and the powers given to them for this purpose. It is this capacity for the potential use of legitimate force that police scholars have argued is the defining feature of the police institution (e.g., Bittner 1974).

The “law enforcement” or “crime fighting” role is often emphasized by police services, the media, and politicians, and it is culturally prized by officers themselves (Loftus 2009; Reiner 2010). It is also how the public tend to understand what the police do (Reiner 2010). However, most police work does not involve either crime or law enforcement (Banton 1964; Bittner 1970). Instead, the majority of police work entails what sociological research has termed “peacekeeping” or “order maintenance.” This encompasses a wide variety of activity, including responding to requests for assistance, solving problems, supervising the beat, “sorting out” situations, and listening and counselling (Bittner 1974; Banton 1964). For this reason, Punch (1979) described the police as a “secret social service.”

The law enforcement and peacekeeping elements of the police role are not distinct. “Peace” calls may turn into “law enforcement” calls if a situation escalates; conversely, matters that may seem to require “law enforcement” may become diffused and de-escalate into “peacekeeping” (Punch 1979). Further, Bittner argued that officers are effective as “peace officers” because of their potential for the use of legitimate force: this capacity empowers them to impose or coerce a solution onto any problem if they deem it necessary or appropriate (Bittner 1974). This makes their involvement in emergencies different from any other agency, and it is primarily for this reason that the public call on the police to intervene in a wide variety of

## A Systematic Review of Research on Rural Policing

incidents, not just those relating directly to crime but also problems involving health, social care, and other emergencies.

*B. Discretion*

Second, discretion is central to frontline policing (Wilson 1968). The potential incidents to which the police are called are varied in scope (Bittner 1974) and often complex and ambiguous. Officers are confronted with a wide range of available interpretations and responses and must determine how to act. For example, classic studies of policing in urban areas of high social deprivation in the United States (Bittner 1967; Bittner 1970; Wilson 1968) and the United Kingdom (Punch 1979) found that in most issues the police encountered there was no legal directive that informed what a police officer should do. Instead, policing is improvised and solved in the field.

Research has consistently shown that the police routinely use their discretion to under-enforce the law, even if an offence has been committed (see Reiner 2010 for a review). Instead, the police typically maintain order through the use of non-coercive measures, using their legal powers, including force, as a latent resource. The “craft” of police work has been described as “using the background possibility of legitimate coercion so skillfully that it never needs to be foregrounded” (Reiner 2010: 144; see also Bittner 1967; Punch 1979; Waddington 1999).

However, it is important to note inequity in the use of enforcement. Research has consistently shown that minority and marginalized communities, especially those of Black, Indigenous, and other people of colour (BIPOC), are disproportionately subject to coercion and enforcement strategies (Bittner 1970; Bowling et al 2008; Cunneen 2020). In particular, young Black men are disproportionately subject to arrest, stop-and-search, charge, and physical force (Bowling et al 2008; Bowling & Phillips 2007; and see section VI below). Further, the use of

excessive force is problematic in many countries (see, e.g., Belur 2010 on the use of deadly force in India and the United States). In addition, officer decisions not to enforce the law can also be problematic, for example in not pursuing cases of intimate partner violence (see Myhill & Johnson 2016; Westmarland et al 2018).

In general, however, research has shown that the dominant characteristic of police work is the under-enforcement of the law: where possible police officers prioritize “peacekeeping” over “law enforcement” in their encounters (see Waddington 1999).

### *C. Community Norms*

Third, the police work within the norms of the community. The police are only one agent of social control and are relatively insignificant in maintaining the peace (Banton 1964). Most of the work of “policing” is done by communities themselves, who keep order through informal social controls: processes of socialization and supervision that are woven into the routines of family, neighbourhood, school, and organizational networks (see also section V). In general, formal policing supports and reinforces these informal social rules. As Banton stated in his classic study, the police are “principally ‘peace officers’ operating within the moral consensus of the community” (1964: 6).

### *D. Summary*

Sociological research has suggested that the elements considered to be core to rural policing in fact describe police work in general. Policing is not primarily an exercise of legal rules and is not primarily concerned with either crime or law enforcement. Instead, all officers use discretion to prioritize the “peacekeeping” elements of their role, under-enforcing the law where possible, shaping their responses through the norms of the communities within which they work. These

## A Systematic Review of Research on Rural Policing

are all features that are described as core to rural police work. While the rural context may make the “soft” elements of police work particularly important, they are not in themselves distinctive.

However, the distinctive conditions of rural and urban areas alter the balance of these elements of work. The relatively high population density, numbers of police officers, and volume of crime in urban areas may encourage an “enforcement” style of police work (see section II above). For example, major government inquiries after urban disorder in England and Wales have criticized the lack of understanding, relationships, and responsiveness to the needs of the community in urban police areas (Scarman 1981; Macpherson 1999). Conversely, the distinctive conditions of rural police work, which will be discussed further below, create pressures for “peacekeeping” styles of policing.

## **2. Police Cultures and “Real” Police Work**

Officers have a repertoire of potential responses in their work. Where decision-making is not directed by formal rules and guidance, informal norms structure discretionary police practices. These “patterned ways of thinking” (Reiner 2010) are fundamental to shaping how officers understand the people they encounter, the incidents they are called to, and their role. In addition, these cultural norms shape how officers decide what is worthy of their attention and what is not (see further Loftus 2009; Reiner 2010).

In particular, researchers have uncovered among the police a common construction of “real” police work as work that is directly tied to “crime-fighting,” a subsequent emphasis on physicality, action, and danger, and avoidance or denigration of other types of police work (Silvestri 2017; Smith & Gray 1985). Consequently, even though law enforcement constitutes a very small part of what police officers do, there is a powerful cultural orientation towards these elements of the police role. Incidents that are more obviously connected to crimefighting may

capture officers' attention more than those that are not. For example, research has shown that police roles associated with "social service" are culturally denigrated: in the terms of English officers in the research of Foster et al (2005), the work is "pink and fluffy," in contrast to the "real" work of arrests and enforcement. There is therefore a contradiction between the actual work of policing, in which order maintenance and "peacekeeping" dominate, and the cultural construction of police work as enforcement or crime fighting.

While intimate partner violence is not a focus of this report, it is important to note that it may be excluded from the category of "real" police work even though it is violent and serious. Research indicates that gendered aspects of police culture can shape police officers' attitudes towards gendered crime (for further discussion, see, e.g., Barlow & Walklate 2020).

For this report, the significance of police culture for understanding rural police work is that it creates conflicts for the policing approach demanded by the pressures of the rural context. This requires a police style that prioritizes "peacekeeping" and requires relationship-building, de-escalation of conflict, and attention to incidents that may not be related to crime at all. The result is that rural police work itself may be devalued, with officers finding it unappealing (e.g., Payne et al 2005); or that officers who are assigned to rural areas may emphasize enforcement in a way that is unsuitable for the needs of the rural context (see section V below).

### **3. Summary and Implications**

Research has shown how rural police work requires the prioritization of the "peace officer" role, which in theory underpins all police work. In urban areas, the culture and context of city police work may emphasize the "enforcement" elements of policing, which erodes this style of work. Conversely, the distinctive conditions of rural police work create pressures for "peacekeeping" styles of policing, which emphasize relationship-building, transparency, de-escalation of conflict,

## A Systematic Review of Research on Rural Policing

and working within the needs of the community. This requires skills that may be neglected in urban services. However, the importance of this work risks disruption by an informal police culture that prioritizes law enforcement and emphasizes incidents deemed exciting or serious. This emphasis may also be underpinned by centralized priorities and performance measures that encourage a culture of enforcement (see section II). These cultural issues could incentivize rural officers to focus on serious offenders and offences if they arise: it might be expected that serious crimes therefore receive a weight of police attention. However, intimate partner violence may be an exception to the cultural emphasis on serious crime. Further, rural police work creates a series of challenges for responding to serious crime. This is discussed in the following section.

#### **IV. Rural Police Work**

This section explores what rural police work actually involves: the organization, role, skills, and challenges of working in small, rural communities, the styles of police work that develop as a response, and the implications for managing serious incidents.

##### **1. Organization**

Rural policing is organizationally distinct from urban police work. Compared to urban areas, rural policing is characterized by small police teams who are responsible for relatively large policing areas. The majority of rural officers are often based together in larger stations within a rural area. Officers may also be spread throughout the territory in smaller stations, sometimes with only a single officer.

Rural police departments have relatively few levels of bureaucratic hierarchy (Falcone et al 2002). Where rural policing is a division of a larger, federal, or centralized police service, higher ranking officers are usually located in centralized headquarters, at a distance to the rural

division. This means that there is frequently a lack of senior oversight and scrutiny in rural police areas, which increases the scope for discretion.

Because of the small scale of rural police teams, there is usually little specialist expertise available. Larger rural police stations may have small investigative units or a few specialist officers, such as those who have particular expertise in firearms or child protection (Souhami 2020). In general, however, specialist units are based in larger regional centres, and support from them must be requested when required. Instead, rural officers are generalists, dealing with every incident from start to finish.

## **2. Rural Crime and Rural Police Work**

A distinctive element of rural police work is its diversity. Rural officers are required to take on a wider variety of roles than urban officers, including acting as custody officers and doing administrative tasks (Ruddell and Jones 2020; Weisheit et al 2005; Payne et al 2005). Research in remote areas of Canada has found that rural officers also act as border security where no other staff are available, and in some locations where circuit courts meet infrequently, the police have been found to act as prosecutors for traffic matters and minor offences (Ruddell and Jones 2020).

Police officers may also take up expanded roles to compensate for a lack of services in rural areas. For example, officers may be required to provide social or health services where these are otherwise nonexistent or inaccessible (Weisheit et al 2005; Liederbach & Frank 2003). Ricciardelli, Adorjan, & Spencer (2020: 201) have noted that some regions of rural, Northern, and remote areas of Canada rely on the police for broader emergency services in the absence of local aid workers and fire departments.

## A Systematic Review of Research on Rural Policing

*A. Policing Issues*

The range of issues rural officers encounter is also distinctive in its diversity. Rural crime is distinguished in its range in both form and seriousness (Weisheit et al 2005; Fenwick 2015; Souhami 2020; Souhami 2022; Liederbach & Frank 2003). Moreover, forms of crime can vary significantly across different rural areas: the diversity of cultural, economic, historical, and demographic contexts of rural communities generates wide disparity in patterns and types of crime (see Ceccato 2016; Donnermeyer 2015). However, in general, rural areas experience issues common to all populated areas, such as anti-social behaviour, neighbourhood disputes, property crimes, drug and alcohol abuse, and violence, including intimate partner violence and family violence (Ceccato 2016; Perrault 2019). Forms of crime typically considered to be urban, such as gangs, also occur in rural areas (Jobes et al 2004). Speeding and traffic violations are frequently described as a particular concern for both rural residents and officers (e.g., Liederbach & Frank 2003; Ricciardelli, Spencer, & Andres 2020).

In addition, rural areas experience some distinctive forms of crime, such as those relating to livestock and wildlife, farm and marine crime, and environmental crime (Ceccato 2016). There is also a greater availability and ownership of guns, which may affect forms of offending (Ricciardelli, Spencer, & Andres 2020). Issues relating to use and ownership of space (such as trespass or the policing of nomadic communities, such as Travellers in the United Kingdom and Ireland) may be particularly important in some rural areas (James 2006).

Further, officers may also be required to take on a wide range of tasks only loosely connected to crime and disorder. As outlined in section II above, they may be required to compensate for a lack of other social, health, and emergency services in rural areas. In addition, due to the responsive nature of rural policing and the expectations of rural communities (see section V below), officers may be asked to assist with a wide range of minor problems. For

## A Systematic Review of Research on Rural Policing

example, research in Scotland, England, and the United States has described rural police assisting with blocked drains and broken windows, searching for lost pets, buying groceries for housebound elderly people, and helping children get to sleep (Slade 2013; Fenwick 2015; Yarwood 2001; Weisheit et al 2005).

*B. Rates and Volume of Crime*

While rural officers encounter a much wider range of issues than urban police, due to the smaller size of rural populations, these are usually at lower frequency in comparison to urban areas (Perrault 2019). This is not to say that crime rates are always lower in rural areas. While economically stable rural areas may experience low rates of crime (Wooff 2017), relatively high levels of social deprivation in many remote and rural areas are associated with high levels of social problems, including crime (Ceccato 2016; Rowe et al 2012; Ruddell et al 2014). Similarly, Donnermeyer et al (2016) have found that structural and economic factors are paramount in shaping the problems experienced in rural areas in Canada and the United States. These problems are compounded by a lack of health care and other services in rural areas, as well as problems of geographic isolation, which restrict access to existing supports. This is particularly problematic in relation to services that require a multi-agency approach, such as drug and alcohol treatment (Gomez & Pruitt 2016). In general, research in Canadian Indigenous communities has found that the volume and seriousness of crime increases along with geographic isolation, while community wellbeing (an indicator of education, employment, income, and housing) decreases (Ruddell et al 2014; see also Jobes et al 2004). Indeed, research in Australia, the United States, and Canada has found that rates for violent crimes can be higher in rural areas than urban areas (Carrington 2007; Donnermeyer et al 2016; Perrault 2019).

## A Systematic Review of Research on Rural Policing

Research has also suggested that there may be a significant under-reporting of crime in rural areas. For example, research in rural areas of Canada and the United States has found a high degree of tolerance of crime in some communities, especially towards forms of interpersonal violence (Donnermeyer et al 2016). Difficulties of access to the police and other services may also act as barriers to reporting (Scott & Hogg 2015; and see section VI-2 below).

Further, crime rates do not reflect the impact that crime may have in a rural community, where criminality may be particularly threatening to the idealised image of rurality as a cohesive, safe environment (Yarwood 2001; and see section V below). Serious crimes in particular may have a profound and lasting effect on residents' perceptions of safety and the self-image of the community (Ceccato 2016).

Yet while the rates and actual incidence of rural crime may in some areas equal or exceed that of urban districts, the comparatively small population in rural areas means that crime is relatively *low in volume*. This is particularly the case for more unusual serious crimes. As a result, officers are likely to have little experience responding to serious crimes.

### **3. The Challenges of Rural Police Work**

Rural officers encounter a range of challenges that present both obstacles to effective policing and risks for officers' safety.

#### *A. Geographical Challenges*

The sheer size of territory covered by rural police teams creates significant problems. Travel can be disrupted by poor road conditions, and some remote areas can be accessed only by boat or air (Ricciardelli 2018; Souhami 2022). Weather is particularly important in rural policing: weather systems can change suddenly, making roads unpassable and causing cell and radio signals to drop. The darkness of the rural countryside can be disorienting and frightening for officers and

## A Systematic Review of Research on Rural Policing

act as a disincentive to leave rural population centres (Souhami 2022). These challenges affect police effectiveness in rural areas. Response times can be slow, making timely intervention difficult. Rantatalo et al's recent study of criminal investigators in rural Sweden show the considerable costs in time and effort compared to their urban counterparts when, for example, residents are not in attendance or do not comply (Rantatalo et al 2021).

Notably, geographical conditions create additional risks for officers. Officers are frequently isolated and at risk of being stranded without means of communication (Fenwick 2015; Ricciardelli 2018; Souhami 2020). If needed, back-up (other officers called for assistance) may take considerable time to arrive (Buttle et al 2010; Ricciardelli 2018). Reliance on cars creates a further series of risks: research in rural and remote areas of Canada have suggested poor road conditions and the high speeds at which officers are required to travel in emergencies make the risks of physically arriving at a call in a timely manner more concerning to officers than the risks of the call itself (Ricciardelli, Spencer, & Andres 2020). Working in isolation means that officers cannot share ideas about complex situations or plans of action, input which can be crucial given the discretionary and immediate decision-making often required in police work. While technology such as video and mobile communications can help combat isolation, problems of satellite and Wi-Fi signals in many rural areas make technology unreliable (Slade 2013; Rantatalo et al 2021).

As a result, despite low volumes of crime, rural police teams have little capacity to adapt to unexpected events or higher than normal numbers of incidents. Instead, resources are easily overwhelmed. This can be exacerbated by a mismatch between the needs of rural police and the central organization of police services that do not accommodate the particular conditions of rural police work (see section II above).

## A Systematic Review of Research on Rural Policing

*B. Organizational Challenges*

Further problems are created by the lack of specialist expertise and resources in most rural police teams. As described in section II above, the location of specialist services in the centre of regional or centralized police services is organizationally efficient: because of economies of scale, it rationalizes resources and allows for higher levels of specialization. By contrast, a decentralized approach to policing results in overall fewer resources, less expertise, and less efficiency: officers are more likely to be tied up by fewer cases that demand extended travel and have associated time costs (Rantatalo et al 2021).

However, there is a tension between administrative and local needs. The need to import specialist teams for serious incidents results in inevitable delays, and the costs of travel and accommodation for specialist units can act as a barrier to access (Souhami 2020). Further, this model means that serious incidents are investigated or managed by officers who may be located far from the local area, do not have local knowledge, and have no relationship with the community.

**4. The Styles of Rural Police Work**

The conditions and pressures of the rural context affect officers' decision-making in relation to the repertoire of responses they have available. This produces a particular style of policing that is often described as an example of "community policing." This is characterised by the development of relationships between officers and residents, whereby officers learn and act in accordance with the concerns of the community as the officers understand them (see Cain 1973; Falcone et al 2002; Fenwick 2015; Griffiths 2019; Leiderbach & Frank 2003; Ruddell & Jones 2020; Ricciardelli 2018; Slade 2013; Weisheit et al 2005; Wooff 2015; Wooff 2017; Souhami 2020). The terminology of "community policing" is frequently used to distinguish this style of

policing from the forms of “response” policing that dominate in urban areas (see, e.g., Falcone et al 2002).

Research has identified the following elements as core characteristics of rural policing:

- **De-escalation:** Officers adopt a mode of policing that is often described as non-coercive, “soft,” or “persuasive” and that emphasizes the role of “mediator” over “enforcer” (Wooff 2015; Wooff 2017; Fenwick 2015). Officers give primacy to diffusing situations: where possible they under-enforce the law, reserving enforcement for more intractable problems. This is particularly important in rural policing arrangements for the protection of both community relations and isolated officers, as well as for the resilience of rural police services. Without dedicated custody officers, for example, an arrest can rapidly deplete the availability of small police teams. More generally, the long-term needs of a community are prioritized over quick arrest (Slade 2013).
- **Discretion:** Officers are often self-directed and as a result develop creative and flexible approaches to their work. This allows them to improvise informal solutions and mobilize whatever resources are available in the moment (Slade 2013).
- **Transparency:** Officers may adopt openness and transparency in their interactions with the public in response to the watchfulness and strong social controls of small communities (Souhami 2020; see also section V-2 below).
- **Partnership:** Because of their isolation, officers must use whatever resources they can to support their work. This may include enlisting members of the public to help (Slade 2013), and partnership work is particularly important. Reflecting this, rural officers are more likely to be involved in committee and other roles in the community (Leiderbach & Frank 2003).

## 5. Summary and Implications

The conditions of police work in rural areas foster a policing style that emphasizes under-enforcement of the law, understanding the needs of the local area, and responsiveness and accountability to local residents. Rural officers also gain experience in a wide range of policing activity from start to finish. Rural policing is therefore highly skilled work that relies on officers working alone, making independent decisions, understanding community expectations and the intended and unintended consequences of their actions, and having highly tuned communication skills. While these skills are not unique to the rural context, they may be less practiced in urban areas where officers have more support, a different pace of work, and different priorities that

## A Systematic Review of Research on Rural Policing

may override the significance of community needs. As a result, urban styles of policing may not generate the information and trust required to identify emerging problems (see further discussion in section V below).

However, the generalist nature of rural police work and the lower volume of crime, especially serious incidents, can mean that rural officers do not have experience in managing major incidents or in specialist offences and may not have the leadership skills required. They may not have quick access to specialist units. They may not have the capacity to suddenly respond to emergencies, and they may not be able to reach isolated communities quickly.

## **V. Police Relationships with Rural Communities**

Arguably the most complex and challenging issue for rural officers is managing their relationship with local communities. This section explores the complexity of the dynamics of rural communities and implications for policing.

The particular construction of rural community life and the effects on police–community relationships vary according to the socio-economic and cultural factors at play in any given community, as described below. They may also be more or less intense depending on the permeability of community boundaries. In general, lower residential mobility is closely connected with the strong social controls that characterize rural community life (Donnermeyer 2015). Further, communities with clearly defined geographical boundaries, such as those that are smaller, isolated, or otherwise distinct from other residential areas, may have stronger local identities, and the dynamics described here are therefore likely to be particularly important (Souhami 2020). A higher degree of geographical connection, population turnover, and flows of mobility may dilute some of the power relations described in this section. However, the issues are likely to be salient to all small communities to varying extents.

### 1. The Social Organization of Rural Communities

Community is an important concept in police scholarship, in particular in describing the relationship between police officers and the public (see Banton 1964). It may also be an important concept among rural populations themselves as a way of defining and describing local identities (Cain 1973; Souhami 2020). However, it is a concept that is notoriously poorly defined in sociological and criminological research, and incorporates a range of geographical, organizational, normative, and rhetorical meanings (see Crawford 1998; Leighton 1988).

In rural police scholarship, “community” tends to be used in two ways. First, it is used synonymously with the population that resides in a police area. Second, the term “community” is used to describe features of social organization that influence the ways that residents behave. In this sense, rural community is primarily seen to be structured by relatively cohesive, homogenous, closely knit, and static social networks, in contrast to the diversity, anonymity, and transience of urban life (Scott & Hogg 2015; Jobses 2002). This understanding of community is often seen as a defining element of rural life and thus rural policing, distinguishing it from that in urban areas (see, e.g., Griffiths 2019; Liederbach & Frank 2003; Wiesheit et al 1994; Wooff 2017).

The structure of rural community life is often connected to the relatively low crime rates in rural communities in comparison to urban areas (see, e.g., Bottoms 2007). In particular, rural communities are seen as places with relatively high levels of social organization, characterized by low residential mobility, shared values, familiarity, and integration. As a result, they are considered to have a relatively high capacity for “collective efficacy”—the ability to work together to solve common problems (Sampson & Wilson 1995)—which can prevent disorder and crime. By contrast, the residential mobility, heterogeneity, anonymity, and family and institutional instability in large urban cities lead to social *disorganization* and consequently an

## A Systematic Review of Research on Rural Policing

inability to tackle problems collectively, resulting in higher crime rates (Sampson & Wilson 1995; Donnermeyer 2015; Jobes 2002; Scott & Hogg 2015).

The strong informal social controls in rural communities are generally seen to reduce the need for formal controls such as the police. In other words, rural communities “police” themselves (Souhami 2020). The role of the police, then, is to support and reinforce these informal community norms, providing recourse to law enforcement only when necessary (Banton 1964; and see section III above).

The construction of rural communities as cohesive, stable, and ordered is a powerful cultural idea that operates as a counterpoint to the complexity and social heterogeneity associated with modern urban life (Cloke 2004; Yarwood 2005). However, the reality is often more complex. First, research has shown that social organization is not a straightforwardly common feature of rural populations, unlike size and population density. Instead, rural communities vary considerably in the extent of features associated with social organization and disorganization. For example, Jobes et al (2004) have found considerable variance among rural communities in Australia both in economic factors such as unemployment and poverty, and social factors such as population heterogeneity, residential mobility, and family instability. These differences significantly predicted variance in rates of crime (Jobes et al 2004).

Second, there may be limits to the efficacy of the informal social controls that supposedly characterize rural communities. While they may prevent minor infractions and disorder, there is little evidence to show whether they are effective against major violations and threats. Moreover, they may in fact *enable* crime. For example, research in Australia (DeKeseredy et al 2009; Scott & Hogg 2015) and the United States (Websdale 1998) has shown how the collective norms of some rural communities are structured by patriarchal gender relations that facilitate violence

against women. Moreover, when small communities present themselves as cohesive, this can conceal internal fractures and fragilities (Scott & Hogg 2015), including disputes between groups of residents. A commitment to the notion of cohesion can also exclude particular groups of people who are considered not to “fit in,” as discussed in section VI below.

Rural communities are thus complex policing environments. They may be simultaneously characterized by strong informal social controls and strained by contested relationships between social groups. These varying elements of community cohesion and conflict are particular to specific contexts but similarly create challenges for police officers. First, officers too can become subject to strong informal social controls; and second, the dominant definitions of “problem groups” can lead the police to reinforce exclusionary power relations, however inadvertently. The following sections describe these problems and their implications for policing.

## **2. Policing Rural Communities**

This section explores the challenges of policing small, rural communities. These problems derive from the informal social controls that are associated with rural life, such as familiarity and a lack of anonymity. The rural policing research cited here describes these issues in a wide range of rural contexts, but the challenges are likely to be particularly evident in communities that are characterized by low residential mobility, shared values, familiarity, and integration.

As noted in section I, this section draws on currently unpublished data from my own research where this fills a gap in existing studies of rural police–community relationships.

### *A. Police Integration into Rural Communities*

Weisheit et al (2005) have described rural officers as more integrated into their communities than urban officers. It is often assumed that rural officers live within or in close proximity to the neighbourhoods they patrol (see, e.g., Ricciardelli 2018; Cain 1973). Indeed, this proximity is

## A Systematic Review of Research on Rural Policing

often described as a defining feature of rural policing (e.g., Leiderbach & Frank 2003; Falcone et al 2002). Consequently, it is assumed that rural police are generally knowledgeable about crime in their communities because they are part of those communities (Cain 1973; Weisheit et al 1994). Further, the small amount of research on rural community expectations of the police suggests that rural communities prefer to be policed by someone who lives locally as it is assumed they will be more likely to represent the values and customs of the community (Cain 1973; Buttle et al 2010; Mawby 2003; Souhami 2020).

However, it is not the case that officers always live in close proximity to the rural communities they serve. Increasingly, remote rural areas may have little or no physical police presence (see section II above), and consequently, unless residents call the police, they may have little contact with them at all. Moreover, proximity may not lead to a shared understanding of local values. My own research in remote areas of Scotland suggests that officers living in small communities may have policing styles that conflict with the communities' own perceptions of their needs (Souhami 2020; Souhami 2022). Such disparity is felt particularly acutely when residents think officers place the priorities of the police over those of local communities. For example, some officers were thought to be too eager to issue tickets for driving infractions rather than using their discretion to give warnings. This was considered unsuitable for the way of life in remote communities and led officers to be viewed as “bullies” or “heavy-handed” (Souhami 2020). Further, integration into the community produces complex power relations that are deeply uncomfortable for officers, as outlined below.

*B. Role Conflict*

For rural officers who do live in close proximity to the areas they police and who have some degree of integration into their communities, policing can be highly challenging. Research has

## A Systematic Review of Research on Rural Policing

frequently described role conflict, with officers experiencing strain between their roles as officer and as community member (Buttle et al 2010; Cain 1973; Falcone et al 2002; Fenwick 2015; Jobes 2003; Souhami 2020). Local officers and their families are often expected to become part of the community (Cain 1973; Jobes 2003; Souhami 2020). Officers have frequently reported that they are seen to be on duty and available to residents at all times and have little respite (Payne et al 2005). This perception can even encompass an officer's family, who are expected to step in when the officer is not available, for example, by relaying messages and providing legal advice (Slade 2013; Ruddell & Jones 2020).

Additionally, the social controls in small communities can manifest as intense scrutiny: residents are often watchful, gossipy, suspicious of newcomers, and protective of their own identities and reputations (Souhami 2020). This scrutiny extends to the police. Rural police research has frequently employed the metaphor of "living in a fishbowl" to describe officers continually under surveillance, in both their professional and personal lives (e.g., Slade 2013; Fenwick 2015; Souhami 2020). Officers' families are also scrutinized and expected to behave impeccably (Weisheit et al 1994; Slade 2013; Souhami 2020).

Officers are therefore dependent on social acceptance within the community to make not only their work possible and pleasant but their personal lives too. This is particularly acutely felt where officers are isolated from colleagues and more reliant on the goodwill of the community (Buttle et al 2010). However, they also need to maintain some degree of social distance to be able to enforce the law when required (Cain 1973). This can be a complex and difficult balance to maintain and a source of considerable stress for officers.

## A Systematic Review of Research on Rural Policing

*C. Power Dynamics between Rural Police and Local Residents*

The issues of community integration and conflicting roles for officers are underpinned by problems of power in rural police–community relations. While the overarching priorities of the police are set centrally, the activities of the police are also shaped to a considerable extent by what residents ask them to do (Bayley 1994). Cain (1973) noted that because of their social and professional dependency on the community, rural police officers were more motivated to accept the definition of problems by the community and pursue complaints that they saw as important. Consequently, communities have considerably greater influence in defining the role and priorities of the police in rural areas compared to those in urban areas (Cain 1973). More recently, Buttle et al (2010) have reaffirmed that in general, rural communities “take greater ownership of their police” than communities in urban areas (598).

My research has found that the police are sometimes viewed as a positive resource for isolated communities, a means to reinforce informal social control, to deter law breaking, and to enforce the law when necessary (Souhami 2020). However, even where communities feel a sense of ownership over their local police, the police present real and imagined risks to small, rural communities. These risks derive from officers’ position as representatives of state power (see section III above) whose actions can have serious consequences for residents. In the context of small and watchful community life, the police pose a risk of embarrassment to collective and individual reputations, especially when they are thought to not understand community norms or to have police-focused agendas that are seen as potentially harmful to community life.

Communities can manage these risks by exercising the resources they have available to them to exert influence on police officers. This can be accomplished through social sanctions such as ostracism, overt scrutiny, and gossip (Souhami 2020), which can be experienced not just by officers but by their families as well (Cain 1973; Souhami 2020). This can be particularly

uncomfortable for officers who also live in the communities they police. Officers are also dependent on help from residents for their work: non-cooperation can obstruct officers' ability to do their jobs. In addition, my research shows that community members sometimes attempt to use officers as a means of exerting power in personal disputes, for example by calling the police for trivial or civil matters where police involvement would not normally be warranted, or by taking advantage of a social relationship with an officer to persuade them to take their side in a dispute.

### **3. Summary and Implications**

Rural police officers often develop particular styles of policing to manage the complicated dynamics of working in small rural communities, including working practices that emphasize transparency, relationship-building, and de-escalation (see section III above). If managed successfully, small community life can be highly effective at supporting and enabling policing. With meaningful relationship-building, officers can understand the problems and needs of the community. The importance of stability in small communities means that community members may be particularly invested in keeping order and helping officers with their work, for example by providing information and support.

However, community dynamics can also subvert power relations between police and communities. Where officers have dual roles as resident and officer, the resultant tension can be significant. My own research suggests that some officers are able to negotiate these tensions successfully. For others, they become intolerable and motivate officers to leave remote settlements for posts in larger communities. Some officers who remain in post resolve these tensions in problematic ways, for example by withdrawing proactive police activity, including a lack of meaningful relationship-building. Rarely, officers could also collude or be co-opted into a problematic community dynamic, for example by taking "sides" in disputes.

### A Systematic Review of Research on Rural Policing

Scottish police services have proposed two main solutions to tackle the challenges presented by rural community–police relationships. First, some police departments and communities prioritize the appointment of local officers who already have ties to the area, on the assumption their local knowledge and existing relationships will enhance their legitimacy. However, knowledge of the personal histories of officers and their families can reinforce uncomfortable power relationships, which may leave officers professionally and personally vulnerable. Second, some police departments aim to protect officers and avoid their co-optation by establishing a set tenure or term of service, after which they move to a new location. However, short-term appointments mean officers are unable to put down roots and integrate, leaving them “outside” the community, which, as noted above, can hinder their work because they may not form a depth of local knowledge. Moreover, such fixed-term policies for rural police can be socially and personally problematic for officers.

My research suggests that effective working relationships between the police and rural communities rely on the establishment of trust and an ongoing, consistent, and committed police presence. For the police to be granted legitimacy by rural communities it seems particularly important that officers both demonstrate a willingness to understand and work within the community's needs rather than imposing an external agenda, and at the same time are seen as reliable, impartial and authoritative representatives of the state.

## **VI. Policing Rural Communities: Racism and Exclusion**

The experiences and perceptions of the police among rural BIPOC communities are largely under-researched (for important exceptions, see Chakraborti & Garland 2003; Chakraborti & Garland 2004). In Canada, research with Indigenous persons (Kiedrowski et al 2017; Jones et al 2019), African Nova Scotian communities in Nova Scotia (Wortley 2019), and African Nova

Scotian women (Bundy 2019) have noted a longstanding lack of confidence in and mistrust of the police, perceptions and expectations of discrimination, over-policing, and over-representation in the criminal justice system. Strikingly, these experiences reflect those well documented among BIPOC communities elsewhere (e.g., Cunneen 2020; Foster et al 2005).

These are complex problems, rooted in longstanding social and historical inequalities and the role of the police in reinforcing them. Perceptions of the police are complicated by the importance of “vicarious experiences”—the way that knowledge of others’ experiences of injustice, in particular the Black men and boys in their lives—strongly affect perceptions of discrimination, forming a lens through which the police are understood (Bundy 2019; Wortley 2019; see also Souhami 2014).

Discrimination in policing can be overt, whether through the racist actions of individual officers or through wider practices whereby BIPOC communities are policed differently and more extensively than other communities (see Bowling et al 2008; Cunneen 2020). Discrimination in policing can also be indirect and less quantifiable. It may derive from a lack of understanding of the particular needs of BIPOC communities and other marginalized groups such as LGBTQ+ people, including an insensitivity to the differential impact of police actions in the context of experiences and expectations of discrimination (Foster et al 2005). Further, in rural areas where community norms are central to the way officers define problems of rural crime and disorder, officers may align with the dominant construction of these problems. This may lead to officers reinforcing the exclusion or neglect of the needs of minority and excluded groups.

### **1. Rural Communities and Exclusion**

As outlined above, rurality is often seen as a “cultural idyll” (Cloke 2004; Forrest & Dunn 2013), a counterpoint to the complexity and social heterogeneity associated with modern urban life

## A Systematic Review of Research on Rural Policing

(Clope 2004; Yarwood 2005). The idea that rural communities are characterized by stability and social order is often based on a set of assumed demographic characteristics of rural populations, including longstanding familial ties and low population turnover (Garland & Chakraborti 2007; and see Donnermeyer 2015 on research connecting social organization with low residential mobility). These supposedly implicit features of rural community life may also be an integral part of the way residents understand the community and their own identities (Souhami 2020).

However, the dominant construction of close-knit pastoral communities masks the exclusionary nature of these ideals. Research has shown that people who do not fit into idealized constructions of rurality are marginalized and mistreated by dominant groups. For example, research in the United States, England, and Australia has shown how Travellers (Vanderbeck 2003), the young (Yarwood & Gardner 2000; Yarwood 2010), drug users (Linnemann & Kurtz 2014), asylum seekers (Hubbard 2005), social housing tenants (Yarwood 2005) and other stigmatized groups are considered unsuitable residents of rural places and actively discriminated against.

Notably, such unequal treatment and exclusion are frequently racialized. Research in England has shown how idealized constructions of rural community are frequently grounded in ideas of a “white landscape” (Garland & Chakraborti 2007: 350) in which minority ethnic groups are out of place (Holloway 2007; Hubbard 2005). These racialized constructions of place intersect with powerful ideas of nationhood. Garland and Chakraborti (2007) and Clope (2004), for example, have shown how rurality is conflated with racialized ideas of Englishness. Similarly, Hubbard (2005) has shown how protests against the building of new asylum centres in England rested on assumptions that rural areas are defined by a white English culture into which

asylum seekers would struggle to fit and attendant claims that they would be better placed in urban areas.

However, rural populations frequently include Indigenous and longstanding BIPOC communities, and even where populations are largely white, there may be a “small but significant” number of people of colour living and working in and visiting the countryside (Cloke 2004: 26). Further, data shows that the racial and ethnic diversity of many rural areas is increasing due to, for example, the settlement of migrant workers (Morant & Edwards 2011) and asylum seekers (Hubbard 2005). The persistent image of white rural culture, to the exclusion of non-white residents, therefore reflects a “cultural invisibility” rather than a true representation of rural populations and rural societies (Cloke 2004).

The racialized construction of rurality obscures the experiences of marginalization, exclusion, and racism that many members of Black, Indigenous, other non-white and minority ethnic communities experience. Garland and Chakraborti (2006; 2007; Chakraborti & Garland 2003; Chakraborti & Garland 2004), for example, have found extended evidence of racism in rural England. While violent racism was found to be relatively uncommon, rural minority ethnic households frequently experienced so-called “low-level” routine harassment or abuse, such as racist graffiti, name-calling, and neighbour disputes (Chakraborti & Garland 2004). Further, minority ethnic residents reported that fitting into white rural society required continual self-denial and compromise on their part only (Cloke 2004). Further, Garland and Chakraborti (2007) found that blame for harassment was sometimes put on “incomers” (newcomers) themselves for disrupting the homogeneity of the community, rather than on white populations whose latent racism may not have previously manifested itself in overt forms (Garland & Chakraborti 2007: 356).

## A Systematic Review of Research on Rural Policing

A significant theme within rural experiences of racism, discrimination, and marginalization is social isolation, with victims not only feeling ostracized from their local community but without the formal and informal minority ethnic community support networks that are more common in urban areas with larger minority ethnic populations (Garland & Chakraborti 2006).

## **2. Policing Rural Racism**

The police play a role in rural experiences of racism and marginalization. First, the police are not immune to the dominant depiction of the rural as a “white landscape” (Garland & Chakraborti 2007). Because race and ethnicity may not be “visible” in rural areas, the needs of minority groups can be overlooked or misunderstood (Bhopal 2006). For example, in their research on racism in the English countryside, Garland and Chakraborti (2006; 2007) found that police officers and other key local agency workers in rural areas were dismissive or unaware of the prevalence of racist incidents in the countryside.

The disregard of officers and agency workers for racist episodes and behaviours in rural areas is reflected by low levels of reported racist incidents within official police statistics, which might suggest that rural racism is not a priority for police services because it does not appear as a significant problem (Garland & Chakraborti 2007: 356). Indeed, in their research on police services in England and Wales, Foster et al (2005) found that rural police claimed racism was solely an issue for urban police services. However, the low level of reporting of racist incidents may not reflect the extent of racist victimization in rural areas. Low levels of reporting may be due to numerically small minority ethnic populations, or they may reflect problems in reporting more generally (Myers & Lantz 2020). Indeed, documented problems in reporting racist incidents—including lack of trust in the police (Bowling 1998; Chakraborti & Garland 2003) and

suspicion that racism will not be taken seriously or addressed effectively—may be particularly salient in rural contexts. Victims may also fear exacerbating the impact of racial harassment through reprisals, shame, or fear that they will be blamed (Myers & Lantz 2020). As outlined above, the effect of reprisals and social sanctions may be particularly acutely felt in small communities.

In addition, there may be a problem in recognizing racist incidents as such. Racial harassment often manifests as so-called “low-level” incidents, although they can have serious cumulative impact on the lives of Black, Indigenous, and other people of colour (Bowling 1998). Consequently, such “low-level” incidents should be regarded from a broader, ongoing perspective rather than as a series of unconnected events (Garland & Chakraborti 2006; Foster et al 2005). Yet the particular characteristics of racial harassment may mean officers do not recognize the significance of these incidents. Further, the prevalence of racism in victims’ daily lives may in some cases result in even victims themselves failing to recognize racist incidents as such (Chakraborti & Garland 2003).

### **3. Summary and Implications**

Rural communities can be experienced as exclusionary for groups who are not considered to “fit.” These include Black, Indigenous, and other people of colour, who may be perceived as “outsiders” in the racialized context of rurality. Rural police may reinforce these exclusions. This may be because they share these exclusionary ideas, however unconsciously. The police may not recognize the extent of rural racism, in part due to problems of reporting, which themselves may be a consequence of deeper-rooted problems of mistrust. Officers may not recognize incidents as racist due to lack of experience and understanding of the dynamics of racial harassment. And because of lack of attention to these problems, they may not understand the underlying histories

## A Systematic Review of Research on Rural Policing

and expectations of discrimination among BIPOC communities that generate mistrust. Consequently, they may not prioritize outreach to these groups to uncover their experience and perceptions of policing. As a result, exclusionary dynamics may be left unaddressed or, at worst, reinforced by patterns of policing that reflect community exclusions.

## VII. Conclusion

This report has set out the core themes of research on rural and remote policing as they may apply to issues that fall within the mandate of the Mass Casualty Commission. This final section draws together some of the core issues discussed in this report and briefly suggests some key implications for responding to serious crime in rural areas.

Rural policing has traditionally been neglected in formal considerations of police work (Souhami 2022; Wooff 2017). Until the last two decades, research on rural policing has been rare (Mawby & Yarwood 2016). Further, due to the relatively low volume of crime in rural areas, rural policing rarely dominates the agendas of police departments. Instead, rural policing is often seen as a “pale reflection” of the “big city thinking” that has dominated policy and practice (Falcone et al 2002: 373). However, an emerging body of research on rural policing, discussed in this report, has drawn attention to the complexity of rural contexts and the distinctiveness of the challenges that they present for police departments and police officers. While there are important continuities with urban policing, research consistently shows that rural contexts both require and produce forms of police work that are “qualitatively different” from that in urban areas (Buttle et al 2010: 597).

Two features of policing in rural contexts are particularly important. First, rural geography and the administrative/logistical realities of policing in rural and remote areas present specific challenges for officers, which shape the skills and styles of policing required. As

## A Systematic Review of Research on Rural Policing

outlined in section IV, rural police departments are usually small and cover very large territories. Officers frequently work alone, separated from colleagues over large distances, without means of communication, and with poor mobility. Officers in rural and remote areas are by necessity generalists, responding to a much wider range of minor and serious problems and adopting a wider range of roles than would be expected in urban areas.

Second, rural policing is differentiated from urban policing by its social context. Rural communities are often structured by relatively cohesive, homogenous, and static social networks, creating strong informal social controls. Section V explored how the organization of rural communities creates complex policing environments. Police officers risk disrupting community order and so may be received with wariness. Yet at the same time, officers themselves may be subject to community social controls, especially if they live within the communities they police, and they may be subject to social sanctions such as withdrawal and ostracism, which can make their personal and work lives intolerable. Further, the apparent cohesion of rural communities can mask contested relationships between social groups, in particular in relation to BIPOC communities and other marginalized groups. If police officers are too closely absorbed into the dominant norms and power relations of rural communities, they can reinforce these exclusionary power relations, even if inadvertently.

Rural policing is therefore complex work, requiring a situated understanding of local communities. Research shows that officers adapt to the social and geographical conditions through a “soft” policing style (Wooff 2017) that prioritizes persuasion and de-escalation over coercion and that relies on skilled communication, understanding of community norms, and the development of productive and trusting working relationships, as discussed in section IV. As outlined in section III, these elements of police work are not unique to rural policing, but the

## A Systematic Review of Research on Rural Policing

isolation of officers and the tight-knit, watchful social relations that can characterize rural communities make them particularly important. This contrasts with policing in cities, where the demands of the urban context are more likely to lead to “enforcement” styles of policing.

For these reasons, urban policing cannot simply be replicated in rural settings. Instead, different modes of policing are required to meet the needs of rural communities and the police officers that work in them. However, there are pressures that make these styles of working difficult. First, as examined in section II, centralization of resources and priorities may result in officers being pulled away from areas with a low volume of crime or being deployed to activities that are not connected to the needs of rural areas. Second, informal police culture prioritizes forms of work that are considered action-oriented and exciting, denigrating other forms of everyday police work. This may encourage officers to direct their attention away from the key rural police work of relationship-building and peacekeeping and may instead encourage law enforcement approaches, as discussed in section III.

Finally, while the research on rural policing does not directly address serious crime, the core elements of rural police work discussed here have two key implications for the ability of rural police teams to manage serious incidents. First, the geographical and organizational context of rural police work creates significant challenges for responding to serious crime. The relatively low volume of serious offences in rural areas and the generalist nature of police work mean that officers at all levels may have little experience in recognizing and responding to serious crime and may not have the skills required. Further, small police departments may not have quick access to specialist units or equipment, especially if these are centralized and located at a distance from the point of need. In addition, the large geographical territory, difficulties of mobility, and small size of police teams mean that rural police forces may not be able to reach

A Systematic Review of Research on Rural Policing

isolated communities quickly and may not have the capacity to respond to sudden and wide-ranging emergencies.

Second, the situated local knowledge and relationship-building that is at the heart of rural policing can be highly productive in soliciting information about and providing support for the more formal police response to serious incidents. These features of rural policing have the potential to help officers identify issues before they escalate. However, this requires the time, resources, and support to enable officers to conduct this work. It is therefore important that police departments appreciate the significance of this work not just as an integral part of routine policing in rural areas but as a potential preventative measure.

**Appendix: Selected Studies of Rural Policing and Communities**

**1. Police-Focused Studies**

Country	Author(s) and Date	Type of Rurality	Methodology	Focus
Australia	Dwyer, A; Scott, J; and Staines, Z (2021)	“discrete Indigenous communities” in Queensland, with 2–30 officers	semi-structured telephone interviews (n=15)	Police perceptions of Indigenous communities
	Jobes, P (2002)	“rural” areas, from villages with a solitary officer to large towns with more than 30 officers	census data, officially recorded crime, and interviews with officers in rural areas from constable to inspector (n=54)	community expectations of the police
	Rowe, S; Wiggers, J; Kingsland, M; Nicholas, C; and Wolfenden, L (2012)	“non-metropolitan” police commands	descriptive analysis of people involved in police-recorded incidents of violence and disorder over 24 months (n= 63,687)	alcohol abuse
	Adorjan, M; Ricciardelli, R; and Spencer, DC (2017); Ricciardelli, R; Adorjan, M; and Spencer, D (2020)	rural and remote areas in Newfoundland and Labrador policed by RCMP “B” Division	semi-structured focus groups (n=20) with 59 young people (ages 13–19)	youth perceptions of the police
Canada	Griffiths, C (2019)	Northern communities	interviews with RCMP officers (n=157)	rural police work
	Hepburn, T; Spencer, D; and Ricciardelli, R (2020)	rural areas of an Atlantic province	semi-structured interviews (n=104) and focus groups (n=31) with 134 RCMP officers	implementation of Youth Criminal Justice Act and policing youth
	Huey, L; and Ricciardelli, R (2015)	7 rural police detachments in Eastern Canada	semi-structured interviews with police officers (n=20), one-week ethnographic observation in a police station	role strain
	Jones, NA; Ruddell, R; and Summerfield, T (2019)	Indigenous communities	comparison of 1996 and 2007 online surveys of police in Indigenous communities (n=827)	policing Indigenous communities
	Kiedrowski, J; Jones, NA; and Ruddell, R (2017)	Indigenous communities	Re-analysis of 2 previous studies: online survey of officers in Indigenous communities (n=827), interviews with police executives from 10 First Nations and 10 non-Indigenous police services	First Nations Policing Programme
	Ricciardelli, R (2018); Ricciardelli, R; Spencer, DC; and Andres, E (2020)	rural, remote, Northern, or Indigenous communities	focus groups (n=14) with 49 officers	perceptions of risk

A Systematic Review of Research on Rural Policing

	Ruddell, R., and Jones, NA (2020)	Indigenous communities, 260 of which in isolated locations	online survey of police in Indigenous communities (n=827)	policing Indigenous communities
	Ruddell, R.; Lithopoulos, S; and Jones, NA (2014)	Indigenous communities	analysis of Crime Severity Index and Community Well Being index for rural and remote communities (n=236)	crime and Indigenous communities
Canada and the USA	Wood, D; and Trostle, L (1997)	remote arctic communities	(1) analysis of incident reports by Village Public Safety Officers from Alaska Department of Public Safety; and (2) RCMP police files	rural police work
	Cain, M (1973)	one "county" police service, one urban police service	interview survey with county force officers (n=64) and wives (n=57); urban force officers (n=76) and wives (n=30); observation of county force patrols (187 hours) and city force patrols (411 hours)	rural police work
	Houdmont, J; Jaehens, L; Randall, R; and Colwell, J (2020)	"predominantly rural" constabulary area, according to 2014 Department for Environment, Food and Rural Affairs (DEFRA) definition	semi-structured interviews (n=34) with constables, sergeants, PCSOs; online survey open to all officers	stress of rural officers
England	Jackman, PC; Glay, G; Coussens, AD; Bird, MD; and Henderson, H (2020)	"county" police service	survey of officers and staff (n=357), focus groups with officers and staff (n=27)	stress of rural officers
	Mawby, RI (2003)	a rural county (population 497,000) containing a number of small towns between 15,000 and 20,000 people	postal survey of electors (n=3752); survey of sample of local businesses (n=621)	perceptions of the police
	Yarwood, R (2005)	a rural constabulary	survey of constables in all Parish Councils in three counties (n=276)	concern about crime
	Yarwood, R (2010)	a rural constabulary; two rural villages (population approximately 660 and 1250)	questionnaire survey to each household in each village	concern about crime
New Zealand	Buttle, J; Fowler, C; and Williams, MW (2010)	"rural" district, including a city of 78200 and stations with "3 or fewer officers" on duty at one time	interviews with officers (n=16), 7 in urban areas, 9 in rural areas	stress of rural officers
Scotland	Slade, B (2013); Fenwick, T (2015)	small communities, very small geographically dispersed communities, islands	interviews with senior officers (n=11), focus groups (n=6) with 34 frontline officers	professional learning

A Systematic Review of Research on Rural Policing

	Souhami, A (2020; 2022)	remote small islands	600+ hours of observation of policing in action, one-year community participation	island policing
	Wooff, A (2015; 2017)	1 "remote" rural village (a 50-minute drive from town of 10,000 or more); 1 "accessible rural" village (25-minute drive from town of 10,000 or more), with population of each approximately 2000	80 hours of observation; interviews (n=33); focus groups (n=8)	policing antisocial behaviour
Slovenia	Eman, K; and Bulovec, T (2021)	"rural" areas	analysis of official crime statistics 2010–2019; interviews with commanders of 5 police stations (n=5)	rural police work
Sweden	Rantatalo, O; Lindberg, O; and Hällgren, M (2021)	20 Remote areas, 15 a accessible rural areas, and 9 urban areas	19 interviews and 287 hours of observation of detective units	criminal investigation in remote areas
UK	Smith, R, and Somerville, P (2013)	rural areas (population normally less than 3000)	analysis of media reports and Freedom of Information Requests	closure of police stations
	Bartol, CR; Bergen, GT; Voickens, JS; and Knoas, KM (1992)	"small town" departments, from 92 officers with a population of 38,000 to 2 officers with a population of 405	analysis of psychological evaluations, supervisory performance, and stress ratings; officer self-report questionnaire	stress of rural officers, with a focus on women
	Liederbach, J; and Frank, J (2003)	small town and rural areas, population between 856 to 12,697	observation of 5 police agencies (1091+ hours); quantification of different types of police interactions and offences	rural police work
	Linnemann, T; and Kurtz, DL (2014)	1 "large city"; 3 "small, rural communities" (2 farm towns, 1 with a small university)	interviews with municipal police officers (n=37), 14 hours of "ride-along" observations, 15 days "in study communities"	perceptions of drug use
USA	Oliver, W; and Meier, C (2004; 2009)	small town and rural jurisdictions, populations under 50,000 and often with fewer than 200 officers	8-hour training session for officers and deputies (sheriff's departments) (n=776), including pre-session survey	stress of rural officers
	Payne, BK; Berg, BL; and Sun, Y (2005)	"rural community" with 2500 residents	analysis of regular local news reports of 911 calls over two years (n=925)	rural police work
	Pelfrey, WV (2007)	"rural" region of South Carolina, including cities and small towns with populations of less than 30,000	interviews with officers (n=192) from community policing and motorized patrols	job satisfaction and work style

A Systematic Review of Research on Rural Policing

Scott, YM (2004)	rural and small-town agencies with 60 officers or fewer	survey of patrol officers (n=135)	stress of rural officers
Weisheit, RA; Wells, LE; and Falcone, DN (1994)	not defined	interviews with rural sheriffs (n=46) and police chiefs (n=28) in 46 small towns	rural police work

2. Community-Focused Studies

Country	Author(s) and Date	Type of Rurality	Methodology	Focus
Australia	Dwyer, A; Ball, M; and Barker, E (2015)	“rural” areas	interviews with LGBTQ youth (n=35); online questionnaire and follow-up interviews with LGBTQ people (n=N/A); interviews with Police Liaison Officers (n=N/A); interviews with lesbian and gay police officers (n=N/A)	policing LGBTQ people
	Forrest, J; and Dunn, K (2013)	“rural” South Australia	telephone survey of rural South Australians (n=392)	rural racism
	Jobes, PC; Barclay, E; Weiland, H; and Donnermeyer, JF (2004)	local government areas (LGAs), smallest unit of government with fewer than 50,000 residents	analysis of crime statistics for 123 rural LGAs	social disorganization in rural communities
Canada	Bundy, J (2019)	Digby, Nova Scotia	interviews with African Nova Scotian women (n=N/A)	rural racism
	Chakraborti, N; and Garland, J (2003)	a rural county	interviews with victims of racial harassment (n=15); focus groups (n=2) and interviews (n=3) with members of white communities; interviews with local service providers (n=28); postal questionnaire survey of minority ethnic groups (n=93)	rural racism
England	Chakraborti, N; and Garland, J (2004)	rural towns and villages in 2 county areas	interviews with victims of racial harassment (n=25); focus groups and interviews with members of white rural communities (n=5); interviews with representatives from local statutory and voluntary agencies (n=33); postal questionnaire of minority ethnic groups (n=163)	rural racism

A Systematic Review of Research on Rural Policing

	Garland, J, and Chakraborti, N (2006)	rural towns and villages in 3 county areas	interviews with victims of racial harassment (n=65); interviews and focus groups with members of white rural communities (n=25); interviews with representatives from local statutory and voluntary agencies (n=50); postal questionnaire survey of minority ethnic groups living in all 3 regions	rural racism
	Garland, J, and Chakraborti, N (2007)	rural towns and villages	questionnaire survey of rural minority ethnic households (n=250); interviews with minority ethnic households (n=60) and with organizations involved in policymaking and service provision (n=60)	rural racism
	Holloway, SL (2007)	rural town	analysis of media reports of case study	rural racism
	Hubbard, P (2005)	rural areas near 2 “market” (small) towns (populations 8600 and 30,000)	analysis of media reports, planning documents, and public inquiry submissions	rural racism
	James, Z (2006)	N/A	interviews with police (n=18) and New Travellers (n=14)	policing Travellers
	Morant, N; and Edwards, E (2011)	rural police force, a area dominated by agriculture	interviews with serving police officers (n=10)	policing diverse populations
	Smith, DP; and Holt, L (2005)	small town	interviews with lesbian residents (n=23)	experiences of lesbian residents
	Vanderbeck, RM (2003)	“rural” areas	analysis of media reports of case study	social constructions of excluded groups
	Yarwood, R, and Gardner, G (2000)	rural parish (population 2000 in 700 households)	survey of all residents (n=331)	perceptions of safety
USA	Kirkey, K, and Forsyth, A (2001)	“suburban–rural fringe”	interviews with gay male residents (n=14); analysis of census data; participant observation	experiences of gay male residents

## Executive Summary

The purpose of this report is to provide a basic primer on the history and current state of emergency management, emergency communications, communications interoperability, public alerting, and the Alert Ready system in Canada. The report does not specifically address or analyze decisions or actions taken with respect to use of Alert Ready on April 18–19, 2020.

It has been developed by a team of communications interoperability consultants who have drawn on professional experiences, as well as a review of open-source documents and documents provided by the Mass Casualty Commission. Select documents associated with emergency management and the use of Alert Ready in Nova Scotia were not available for review. In the absence of formal citations, the views and opinions expressed in this report are those of the authors.

The table below defines “emergency management,” “emergency communications,” and “communications interoperability” and highlights the relevance of communications as part of an effective emergency management program.

*Table 1: Emergency Management, Emergency Communications, & Communications Interoperability*

<b>Emergency Management</b>	<b>Emergency Communications</b>	<b>Communications Interoperability</b>
<p>Emergency management includes risk management measures and activities related to prevention and mitigation, preparedness, response, and recovery.</p> <p>In Canada, emergency management adopts an all-hazards approach, addressing both natural and human-induced hazards and disasters.</p> <p>Provinces, territories, and individual jurisdictions are responsible for developing and maintaining their respective emergency management programs based on regional threats, risks, and priorities, while ensuring they are aligned with the national Emergency Management Framework (currently 3rd edition, 2017).</p>	<p>Emergency communications is the exchange of information by emergency responders via data, voice, and video, on demand, in real time, as needed and as authorized, to complete their missions.</p> <p>Emergency communications also includes the sharing of information with the public through a variety of means.</p> <p>Effective emergency communications is critical to successful emergency management programs. The effectiveness of emergency communications is influenced by available resources, procedures, technology, and training.</p>	<p>Communications interoperability is the ability of emergency personnel to communicate between jurisdictions, disciplines, and levels of government, using a variety of systems, as needed and as authorized.</p> <p>The degree of communications interoperability achieved in any jurisdiction is influenced by the integration of governance structures, standard operating procedures (SOPs), technology, training and exercises, and the frequency and consistency of usage.</p> <p>The same approach should be applied to optimize specific technologies and solutions.</p>

In Canada, there is currently a lack of comprehensive and formal doctrine and training to guide emergency management response. As a result, each jurisdiction has developed and/or adopted their own respective response models; and Emergency Management terms, tools, and practices are not standardized across Canada. Although the underlying concepts are similar, variations mean that there are inconsistent interpretations and applications based on local practices, available resources, and training.

Alert Ready is the brand name of Canada's National Public Alerting System (NPAS), which launched in 2014 as a federal, provincial, and territorial (F/P/T) initiative, enabling emergency management organizations across Canada to warn the public about imminent or possible dangers such as floods, tornados, hazardous materials, fires, and other disasters. Efforts to develop this modern all-hazards, all-media NPAS in Canada date to 2007 and the release of a set of decisions by the Canadian Radio-television and Telecommunications Commission (CRTC).<sup>1</sup>

Alert Ready was developed by F/P/T emergency management officials (specifically, members of the Senior Officials Responsible for Emergency Management (SOREM), Environment and Climate Change Canada, Peimorex Corporation, the broadcasting industry, and wireless service providers). Municipal emergency management organizations and first responder agencies were not part of these development efforts.

Prior to the development of the NPAS, Alberta was the only province in Canada that had developed its own province-wide emergency warning system.<sup>2</sup> Alberta continues to use its own system and has granted (at least) Calgary Emergency Management Agency (CEMA) direct access.

The table below provides a summary of the challenges faced by the Alert Ready system. Some of these challenges can be seen as opportunities that, if leveraged, could enhance public alerting and the use of Alert Ready during emergencies.

(2007) "Public Alerting in Canada: Renewing the Emergency Broadcasting System" *Canadian Journal of Communication* 32: 277-93, <https://cjc-online.ca/index.php/journal/article/view/1926/3170>. A chronology of the development of the Canadian NPAS may be found on the Public Safety Canada website: <https://www.publicsafety.gc.ca/cnt/mrgnc-mngmnt/mrgnc-prprdncs/ntnl-pblc-lrtng-sstm-chr-en.aspx>.

<sup>2</sup> See the Alberta Emergency Alert website: <https://emergencyalert.alberta.ca/content/about/index.html>.

Table 2: Public Alerting and Alert Ready: Challenges

<b>Public Alerting and Alert Ready Challenges</b>
<b>Governance</b>
<ul style="list-style-type: none"> <li>• Direct engagement of local emergency services (police, fire, paramedics) with Alert Ready has historically been limited. Prior to the incidents of April 2020 and apart from the issuance of Amber Alerts, police of jurisdiction were not on the list of approved alerting authorities in Nova Scotia or in most other provinces and territories.</li> </ul>
<b>Standard Operating Procedures</b>
<ul style="list-style-type: none"> <li>• There does not appear to be a comprehensive strategy for the use of Alert Ready for all-hazard incidents in Nova Scotia.</li> <li>• Some jurisdictions and agencies have well established operating procedures for Alert Ready, but only for weather-related alerts and Amber Alerts, not for other types of incidents and emergency situations.</li> </ul>
<b>Technology</b>
<ul style="list-style-type: none"> <li>• Alert Ready provides authorized and trained, federal, provincial, and territorial organizations the ability to rapidly warn the public of imminent or unfolding, life-threatening events, through radio, television and compatible, connected, wireless devices.</li> <li>• Despite the availability of Alert Ready, many jurisdictions and emergency services rely on other technologies for public alerting and/or notification, which means some portion of the public may not be reached.</li> </ul>
<b>Training and Exercises</b>
<ul style="list-style-type: none"> <li>• Training on the use of Alert Ready is a provincial/territorial responsibility. The level of training for emergency services and alert authorities on the use of Alert Ready appears to vary between jurisdictions or is lacking.</li> </ul>
<b>Usage (Frequency and Consistency)</b>
<ul style="list-style-type: none"> <li>• Historically, Alert Ready has been used predominantly for natural hazard incidents and Amber Alerts. In the absence of clear policy and procedures for the use of Alert Ready in all potential scenarios, there appears to be a hesitance or disinclination to use Alert Ready for all significant incidents and emergencies. This has led to inconsistencies and challenges in advising all members of the public of other significant incidents or emergencies</li> </ul>

Alert Ready has far-reaching capabilities to provide public alerting during emergencies, but the tragic events in Nova Scotia during April 2020 highlighted a number of challenges and limitations associated with its implementation and use. Since April 2020, more and more jurisdictions have re-examined their use of Alert Ready. Although positive progress has been made, there remains an opportunity to do more to optimize the benefits of Alert Ready for public alerting.

The opportunities presented above and discussed in more detail below may provide pathways for Nova Scotia and other jurisdictions to enhance public alerting and the use of Alert Ready during

emergencies. Ultimately, the use of Alert Ready in support of public alerting remains a provincial or territorial responsibility, and its overall effectiveness will be influenced by the integration of governance, standard operating procedures, technology, training and exercises, and usage.

## 1. Introduction

The purpose of this report is to provide a basic primer on the history and current state of emergency management, emergency communications, communications interoperability, public alerting and the Alert Ready system in Canada. The report does not specifically address or analyze decisions or actions taken with respect to use of Alert Ready on April 18-19, 2020.

Specifically, the report introduces the key elements and interdependencies relevant to emergency management, emergency communications interoperability, public alerting, and Alert Ready. Where applicable, the report identifies challenges associated with governance, policies and procedures, technology, training and exercises, and usage. While our team has identified opportunities to enhance Alert Ready, these opportunities will be addressed within phase 3 of the Commission's process.

This report has been developed by a team of communications interoperability consultants who have drawn on professional experiences and a review of open-source documentation. The scope of this report does not extend to the specific policies governing Emergency Management and the use of Alert Ready in Nova Scotia. Rather, this report describes overall system design, capabilities, and governance for the Canada-wide Alert Ready system.

## 2. Emergency Management

This section of the report introduces key concepts associated with emergency management, including the pillars/phases of emergency management, risk-based emergency management, and governance. The core definition of emergency management as expressed by Canada's Emergency Management Act (2007) is "the prevention and mitigation of, preparedness for, response to, and recovery from emergencies."<sup>3</sup>

Emergency Management (EM) is a methodology practiced by governments and organizations around the world to address all elements of emergencies before, during, and after they occur. This system comprises four interconnected, cyclical phases that may unfold in succession or even in tandem. An "all-hazards" approach to emergency management means that all emergencies and disasters, whether caused by nature or by human acts (both intentional and unintentional), are taken into account. Although priorities may vary from incident to incident, the overarching priorities of emergency management include the protection of life, preservation of the environment, and protection of property and the economy.

While human societies have endured emergencies and disasters for millennia, it has only been within the last century that organized systematic approaches to address them have arisen. Noted Canadian emergency management scholar T. Joseph Scanlon has credited the response to the Halifax explosion of 1917 as "influencing later emergency planning and disaster theory."<sup>4</sup>

## Communications Interoperability and the Alert Ready System

**2.1. Emergency or Disaster?**

It is not uncommon for slight variations in definitions of emergency to exist amongst various governments, organizations and even countries, but generally, they all have the same meaning. The City of Toronto defines an emergency as “a situation or impending situation that constitutes a danger of major proportions that could result in serious harm to persons or substantial damage to property that can be caused by forces of nature, disease or other health risks, accidents or an act whether intentional or otherwise”.<sup>5</sup>

The term “disaster” is often used interchangeably with “emergency” but generally implies a broad scope and widely negative impacts. The United Nations characterizes disaster as “a serious disruption of the functioning of a community or society, which involves widespread human, material, economic or environmental impacts that exceed the ability of the affected community or society to cope using its own resources”.<sup>6</sup>

The Canadian Disaster Database (CDD), which is maintained by Public Safety Canada, contains detailed disaster information on more than 1,000 natural, technological, and conflict events (excluding war) that have happened since 1900 at home or abroad and that have directly affected Canadians. The events tracked by the CDD conform to the Emergency Management Framework for Canada definition of a disaster and meet one or more of the following criteria:

- 10 or more people killed
- 100 or more people affected/injured/infected/evacuated or homeless
- an appeal for national/international assistance
- historical significance
- significant damage/interruption of normal processes such that the community affected cannot recover on its own<sup>7</sup>

The list of natural and technological events captured by the CDD is quite comprehensive and inclusive. The current list of conflict events used by the CDD is limited to “arson,” “civil incidents,” “hijacking,” and “terrorist.” Civil incidents contain subcategories of Disturbance/Demonstrations and Rioting, while Shootings are currently identified in the CDD as terrorist incidents. Section 83.01 of the Canadian Criminal Code defines terrorism as an act committed “in whole or in part for a political, religious or ideological purpose, objective or cause” and “with the intention of intimidating the public, or a segment of the public, with regard to its security, including its economic security, or compelling a person, a government or a

<sup>5</sup> City of Toronto. (2020). “Legal Definition of Emergency,” Office of Emergency Management, <https://www.toronto.ca/311/knowledgebase/kb/docs/articles/fire-services/office-of-emergency-management/legal-definition-of-an-emergency.html> (accessed 29 March 2022).

<sup>6</sup> See the website of the United Nations Office for Disaster Risk Reduction, <https://www.undrr.org/terminology/disaster> (accessed 29 March 2022).

<sup>7</sup> See the Public Safety Canada webpage for the Canadian Disaster Database, <https://www.publicsafety.gc.ca/cnt/rsrsc/cndn-dsstr-dtbs/index-en.aspx> (accessed 29 March 2022).

domestic or an international organization to do or to refrain from doing any act.”<sup>8</sup> No category for mass violence or shootings currently exists within the CDD.

A review and update of event categories captured in the Canadian Disaster Database may be appropriate to ensure that mass shooting incidents are included.

## 2.2. Risks and Emergency Management

It is common practice for emergency management efforts and priorities to be informed by and structured according to risks that are identified through a formal risk assessment process. Although there is not a single approach to conducting all-hazards-based assessments, evidence-based risk assessment can help ensure the effective implementation of the four emergency management pillars (mitigation, preparedness, response and recovery), which are outlined in the Emergency Management Framework for Canada (2017) and will be discussed further below.<sup>9</sup>

Public Safety Canada promotes evidence-based risk assessments and had developed a federal All-Hazards Risk Assessment (AHRA) process:

Effective Emergency Management Planning includes the integration of mandate-specific all-hazards risk assessment as the planning premise. The All-Hazards Risk Assessment (AHRA) will help identify, analyze and prioritize the full range of potential non-malicious and malicious threats. The process takes into account vulnerabilities associated with specific threats, identifies potential consequences should a threat be realized, and considers means to mitigate the risks.<sup>10</sup>

It should be noted that the All-Hazard Risk Assessment Guide, which was originally designed primarily for federal departments and agencies, is still available online but was archived in 2013 and is no longer formally in use.<sup>11</sup>

In the absence of a standardized and national approach to emergency-management-based risk assessment, several provincial and territorial jurisdictions have developed and adopted their own risk-assessment processes, such as Ontario’s Hazard Identification and Risk Assessment (HIRA) system.<sup>12</sup> The key elements of the HIRA process are described as:

- **Hazard Identification** - In this step the hazards that could impact your community are separated from those that cannot. This requires a review of all hazards and their causes to

<sup>12</sup> Emergency Management Ontario. (2012). “Hazard Identification and Risk Assessment Workbook,” [www.emergencymanagementontario.ca/sites/default/files/content/emo/docs/HIRA%20Workbook%20EN\\_PDFUA.pdf](http://www.emergencymanagementontario.ca/sites/default/files/content/emo/docs/HIRA%20Workbook%20EN_PDFUA.pdf) (accessed 29 March 2022).

## Communications Interoperability and the Alert Ready System

determine whether they may be a threat to your community. This may require the consultation of the scientific community, historical records and government agencies.

- **Risk Assessment** - In this step the level of risk for each hazard is examined. This may involve speaking with hazard experts, researching past occurrences and possible scenarios. The likelihood of the hazard occurring and the potential impacts of the hazard on people, property, the environment, business and finance and critical infrastructure should be examined.
- **Risk Analysis** - The information collected in the risk assessment step will be analyzed in this step. The desired outcome of the risk analysis is the ranking of the hazards. This highlights the hazards that should be considered a current priority for your emergency management program.<sup>13</sup>

The Ontario HIRA, which is similar to the AHRA process, is used for “defining and describing hazards by characterizing their probability, frequency, and severity and evaluating adverse consequences, including potential losses and injuries”:

The purpose of the HIRA is to assess the potential risk of hazards with the capacity to cause a disaster. This helps set provincial emergency management priorities and also helps local government, city council, land use planners, residents, and emergency management professionals take action to reduce future losses.<sup>14</sup>

Public Safety Canada maintains a consolidated list of potential risks and hazards by jurisdiction (national, provincial and territorial).<sup>15</sup> The site lists key hazards and emergency scenarios identified by federal authorities for Canada and provincial and territorial authorities for each respective province or territory, but it is unclear what risk assessment methodology is used to identify the hazards and emergency scenarios. The page dedicated to hazards and emergencies identified for Nova Scotia states the following:

In Nova Scotia, severe and unpredictable weather such as flooding, blizzards and hurricanes can occur. In addition to natural disasters, there are other types of risks, such as power outages, industrial accidents and major transportation accidents. As well, there is the possibility of acts of terrorism on Canadian soil. The following list contains natural risks and hazards that could happen in Nova Scotia.

- |  |   |
|--|---|
| <ul style="list-style-type: none"> <li>• Floods</li> <li>• Chemical releases</li> <li>• Hurricanes</li> <li>• Pandemic influenza (Public Health Agency of Canada)</li> <li>• Landslides</li> </ul> | <ul style="list-style-type: none"> <li>• Power outages</li> <li>• Severe storms</li> <li>• Storm surges</li> <li>• Tsunamis</li> <li>• Wildfires</li> </ul> |
|--|---|

(2012). “Hazard Identification and Risk Assessment Workbook,” [www.emergencymanagementontario.ca/sites/default/files/content/emo/docs/HIRA%20Workbook%20EN\\_PDFUA.pdf](http://www.emergencymanagementontario.ca/sites/default/files/content/emo/docs/HIRA%20Workbook%20EN_PDFUA.pdf) (accessed 29 March 2022).

<sup>14</sup> Ibid.

<sup>15</sup> See the Public Safety Canada webpage “Get Prepared: Regional Hazards,” <https://www.getprepared.gc.ca/cnt/hzd/rgnl/index-en.aspx> (modified 21 February 2018).

## Communications Interoperability and the Alert Ready System

The provincial Emergency Management Office (EMO) uses the four pillars of emergency management - mitigation, preparedness, response and recovery - to ensure a prompt and coordinated response to an emergency. This is accomplished through training and planning before an emergency occurs and by coordinating provincial resources during an emergency.<sup>16</sup>

Notably, though the Canadian Disaster Database contains a category for terrorist incidents, on Public Safety Canada's regional hazards webpage, there is no explicit reference to mass violence as a significant hazard or emergency in Nova Scotia. The same omission is true of the key hazards and emergencies identified for all other provinces and territories.

Although there would be merit in using a common risk assessment tool across all jurisdictions, the data contained in the CDD and the results of an AHRA, HIRA or other risk assessment can be used to help inform emergency management priorities and investments.

### 2.3. Pillars of Emergency Management

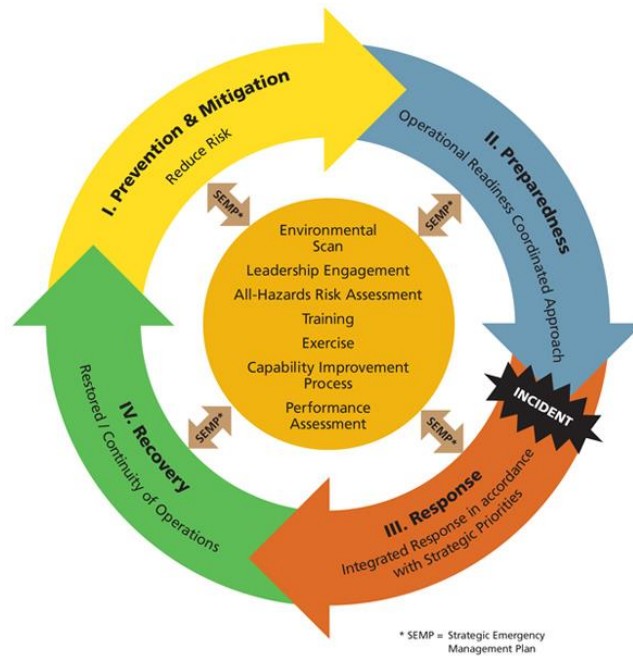

Emergency Management consists of four phases or functions, once referred to as “pillars.” These include 1) Prevention and Mitigation, 2) Preparedness, 3) Response, and 3) Recovery. These phases are referenced in most notable Canadian emergency management references and publications. For example, **Figure 1** below is drawn from the Public Safety Canada “Emergency Management Planning Guide.”<sup>17</sup>

<sup>16</sup> See the Public Safety Canada regional hazards page for Nova Scotia, <https://www.getprepared.gc.ca/cnt/hzd/rgnl/index-en.aspx> (modified 21 February 2018).

<sup>17</sup> Public Safety Canada. (2010). “Emergency Management Planning Guide, 2010–2011,” <https://www.publicsafety.gc.ca/cnt/rsrscs/pblctns/mrgnc-mngmnt-pnnng/mrgnc-mngmnt-pnnng-eng.pdf> (accessed 29 March 2022).

Communications Interoperability and the Alert Ready System

Figure 1: Emergency Management Continuum

Source: Public Safety Canada, “Emergency Management Planning Guide”

Each of the Emergency Management phases/pillars is explained below.

**(1) Prevention and Mitigation**

As outlined in the Emergency Management Framework for Canada, the prevention and mitigation phase focuses on “actions taken in order to adapt to, eliminate or reduce the impact of disasters in order to protect lives, property, the environment, and reduce economic disruption. Prevention/mitigation includes structural mitigative measures (e.g., construction of floodways and dykes) and non-structural mitigative measures (e.g., building codes, land-use planning, and insurance incentives).<sup>18</sup> The primary objective of prevention and mitigation efforts is to reduce the risk of a potential hazard or emergency.

**(2) Preparedness**

Preparedness focuses on activities “necessary to be ready to respond to a disaster and manage its consequences through measures taken prior to an event (e.g., emergency response plans, mutual assistance agreements, resource inventories, training, public awareness activities, equipment and exercise programs). Preparedness activities can also include testing and

<sup>18</sup> “Emergency Management Framework for Canada” (cited above 9).

exercising emergency communications and public alerting systems, capabilities and procedures.”<sup>19</sup> The primary objective of the preparedness phase is to ensure operational readiness and to set the framework for a well coordinated approach and response to all probable and potential hazards and emergency scenarios.

### **(3) Response**

The response phase focuses on activities “during or immediately before or after a disaster to manage its consequences (e.g., through emergency public communication, search and rescue, emergency medical assistance, and evacuation) to minimize suffering and losses associated with disasters.”<sup>20</sup> The objective of the response phase is to initiate an integrated response based on established plans and procedures in accordance with strategic priorities, i.e., protection of life, protection of property, and protection of the environment. Response efforts conclude when the immediate dangers and direct consequences of a disaster have largely diminished. Depending on the nature and impact of an incident, recovery efforts and activities may be required.

In Canada, there is lack of formal national doctrine and training to guide emergency management response. As a result, each jurisdiction has developed and/or adopted their own respective response model, and many emergency management terms, tools and practices are therefore not standardized across Canada and can vary even between neighbouring jurisdictions. Although the underlying concepts are similar in most jurisdictions, local practices, different available resources, and varied training can make for inconsistent interpretation and application of emergency response procedures.

In contrast, the United States has developed and formalized its National Incident Management System (NIMS), which is supported by robust and standardized tools, templates, and training. The program is described on the website of the Federal Emergency Management Agency (FEMA) website:

NIMS guides all levels of government, nongovernmental organizations and the private sector to work together to prevent, protect against, mitigate, respond to and recover from incidents. In addition, NIMS provides stakeholders across the whole community with the shared vocabulary, systems and processes to successfully deliver the capabilities described in the National Preparedness System. NIMS also defines operational systems that guide how personnel work together during incidents.<sup>21</sup>

In 2013, the Canadian Association Chiefs of Police (CACCP) hosted an Operational Planning and Management of Public Safety Events workshop. An overarching objective of this workshop was to champion the development and adoption of a common approach for planning and response to public safety events. Very little progress toward establishing a

## Communications Interoperability and the Alert Ready System

standardized national incident management model has been made since this workshop was held.

Earlier collaborative efforts between the Canadian Interagency Forest Fire Centre (CIFFC) and the Alberta Emergency Management Agency (AEMA) established Incident Command System (ICS) Canada. ICS Canada is a “network of organizations working cooperatively to maintain a standard Incident Command System that enhances incident management response through improved interoperability.”<sup>22</sup> ICS Canada has consistently advocated for a pan-Canadian Incident Command/Incident Management System since 2009.

The Province of Ontario published its own Incident Management System (IMS) in 2008. This doctrine-based approach was updated to become “guidance” in 2021.<sup>23</sup> The original Ontario IMS provided an organized structure for emergency response, as depicted in **Figure 2**. Of note, it included the role of Emergency Information Officer, to be responsible for the development and release of information regarding emergencies to the public.<sup>24</sup> The 2021 guidance document provides fewer details related to the Emergency Information position.

*Figure 2: Province of Ontario IMS Structure*

Source: IMS Working Group, “Introduction to the Incident Management System (IMS) for Ontario”

This report does not examine the nature and structure of the current Nova Scotia emergency management and incident command system, the use of emergency information officers, or the interoperability and interactions between various dispatch centres, decision centres, and operations centres. Irrespective of the incident command model adopted by a jurisdiction,

<sup>22</sup> See the webpage of ICS Canada, <https://www.icscanada.ca/en/about+ics+canada.html> (accessed 29 March 2022).

## Communications Interoperability and the Alert Ready System

response efforts should include public alerting and emergency communications that are based on established plans and procedures, developed as part of the preparedness phase. Ideally, robust emergency communications and public alerting capabilities and procedures are in place to support emergency response.

These capabilities and procedures should include but not be limited to the following:

- i. Shared and encrypted interoperability talk groups (local, regional, and provincial);
- ii. Secure communications between dispatch centres, decision centres and operations centres, and emergency responders (mobile devices and mobile data terminals);
- iii. Predefined and recognized authorities for public messaging and public alerting (Emergency Information Officers and Alert Ready release authorities); and
- iv. Predefined technologies for information sharing during emergencies (e.g., Alert Ready, social media, road signs, etc.).

Ideally, any communications with the public during an incident should alert the public without compromising the response and responder safety. Ultimately, any communications with the public should be at the discretion of the incident commander and/or Alert Ready release authorities. The timeliness and effectiveness of these communications are contingent on well-established protocols and associated training and exercises. Noting that emergency public communication is a key element of the response phase, appropriate emphasis should be placed on establishing effective emergency communications and public alerting capabilities and procedures, along with communications-based training and exercises during the preparedness phase.

The concepts of emergency communications and public alerting are explored in greater detail in sections 3 and 4 respectively.

#### **(4) Recovery**

Recovery activities are designed to repair or restore conditions to an acceptable level through measures taken after a disaster (e.g., the return of evacuees, trauma counselling, building and road reconstruction, economic impact studies, and financial assistance programs). Recovery efforts can be initiated during the response phase if it is safe to do so. From an emergency management perspective, recovery activities should also include conducting after-action reviews related to the performance of emergency communications and public alerting. The results of these reviews can help inform the development of additional activities related to emergency communications and public alerting in terms of prevention and mitigation and preparedness activities.

The four phases/pillars of EM demonstrate not only the importance of the prevention/mitigation and preparedness phases but the integrated nature of effective frameworks for responding to a full range of probable and potential hazards. In most cases, the effectiveness of response is influenced by comprehensiveness of plans and procedures, along with skills and knowledge developed through training and exercises. Ultimately, “the objective of planning activities is to have an effective and integrated response in accordance with established strategic priorities, and

## Communications Interoperability and the Alert Ready System

respond to emergencies in a manner that is consistent with the response plan and existing arrangements.”<sup>25</sup>

#### 2.4. Emergency Management Governance in Canada

An overarching principle of EM in Canada is that it is a shared responsibility across all sectors of society, and collaboration amongst all involved parties is a sought-after objective. Everyone, from the highest levels of government (federal, provincial/territorial) to local communities and even individuals, carries some aspect of responsibility for managing emergencies. For this reason, federal, provincial, and territorial (F/P/T) governments in Canada operate within a jointly established emergency management governance structure, as outlined in the Emergency Management Framework for Canada (third edition), issued by the Ministers Responsible for Emergency Management in May 2017.<sup>26</sup> The Framework states: “Strengthening resilience to natural and human-induced hazards and disasters requires contributions from all of society, coordinated by strong and effective leadership from F/P/T governments.” The Emergency Management Act also describes the responsibilities of the federal Ministers of Public Safety and Emergency Preparedness as “coordinating, amongst government institutions and in cooperation with the provinces and other entities, emergency management activities”.<sup>27</sup>

However, despite the shared and cooperative nature of the general responsibility for emergency management, the Canadian constitutional framework means that emergency management governance falls under the jurisdiction of provincial/territorial governments. The federal government can support the emergency management activities of the provinces and, through the provinces, those of local authorities; but federal powers in this regard are explicitly constrained by the Act:

6(3) A government institution may not respond to a provincial emergency unless the government of the province requests assistance or there is an agreement with the province that requires or permits the assistance.

The Emergency Management Act prohibits federal ministers from injecting themselves into a provincial emergency without first receiving a request for assistance, or an agreement with the province is in place permitting federal assistance. Unless an emergency is of such magnitude and complexity that it is determined to be of national consequence, is in its exclusive jurisdictions and on lands and properties under federal responsibility, or a province/territory requests assistance of the federal government, it remains under the control of the provincial/territorial governments.

Public Safety Canada (PSC), which was established in 2003 when a sense of urgency was still quite high in the post-9/11 period, is the current federal department that manages the minister’s (EM) responsibilities, amongst other portfolios. Various versions of federal emergency management agencies have been in existence for 80+ years in Canada and have undergone reorganization several times over their lifespans. As of October 2021, Public Safety Canada has

<sup>25</sup> “Emergency Management Planning Guide” (cited above n 17).

<sup>26</sup> “Emergency Management Framework” (cited above n 9).

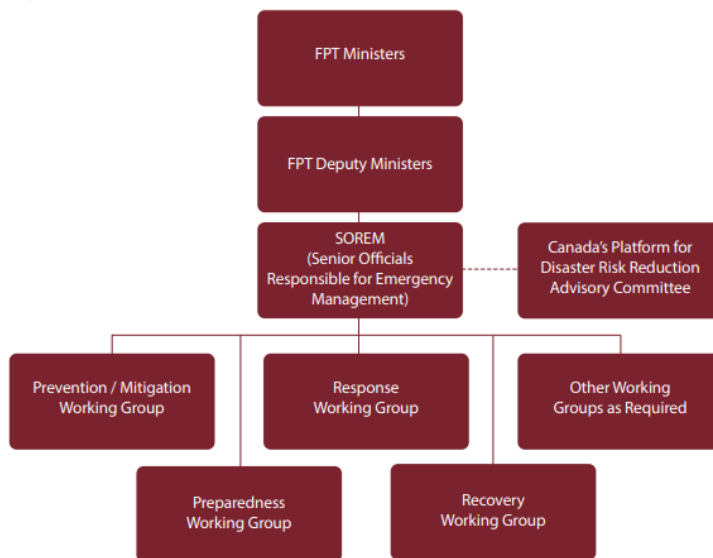

<sup>27</sup> Emergency Management Act 2007 (above n 3).

Communications Interoperability and the Alert Ready System

been separated into two departments, with a Minister of Public Safety and a separate Minister for Emergency Preparedness.

The governance structure as illustrated by the Framework appears top-down and hierarchical (see **Figure 3**), but it functions as a cooperative that “facilitates coordination and collaboration in full respect of each government’s legislated jurisdiction.”<sup>28</sup>

Figure 3: F/T/P Governance Structure

Source: Public Safety Canada, “An Emergency Management Framework for Canada” (3<sup>rd</sup> edition, 2017)

The F/P/T collective called Senior Officials Responsible for Emergency Management (SOREM) is at the centre of the governance model shown above. Although formal terms of reference are not publicly available, it is comprised of representatives from provincial and territorial emergency management organizations and from Public Safety Canada. According to Public Safety Canada’s website, SOREM

works to harmonize and improve emergency practices across the country. SOREM includes representatives from provincial and territorial Emergency Management Organizations and Public Safety and is responsible for providing guidance and advice on how to enhance emergency management to federal, provincial and territorial Deputy Ministers responsible

<sup>28</sup> “Emergency Management Framework” (cited above n 9).

## Communications Interoperability and the Alert Ready System

for emergency management. It also provides guidance to the standing forum of federal, provincial and territorial Ministers responsible for emergency management.<sup>29</sup>

A number of F/P/T co-chaired working groups support agreed-upon decisions and strategic directions of SOREM. The number and nature of the “Other Working Groups” varies but have included an F/P/T Interoperability Working Group and the Public Alerting Working Group (PAWG). There is limited publicly available information on the mandate and work of these working groups. The current status of these working groups is unknown.

Although SOREM plays a significant role in providing advice and guidance on emergency management, each province and territory is responsible for establishing and funding their respective programs.

### 2.5. Emergency Management Governance in Nova Scotia

Emergency management in Nova Scotia is carried out under the authority of the NS Emergency Management Act 1990, which lays out the powers and actions of the provincial government over all matters respecting emergency planning, preparedness, response, mitigation, recovery.<sup>30</sup> The Act articulates conditions for declaring and terminating states of emergencies, along with the duties of municipalities.

Emanating from the Act is a number of Civil Emergency Planning Regulations that articulate designated planning responsibilities of several government departments.<sup>31</sup> Of particular note, the Regulations stipulate in §4(B) that the Department of the Attorney General shall:

- (a) be responsible for the administration of law and order during any type of an emergency through the Royal Canadian Mounted Police and municipal police forces;
- (b) be responsible for the coordination of emergency legislation and regulations required by the Provincial departments and agencies both for peacetime disasters and war emergencies;
- (c) through the RCM Police, develop a Provincial Emergency Police Services Plan to provide effective police protection in the reception and non-stricken areas of the Province. Without in any way limiting the scope, such a plan shall include and provide for the:
  - (i) effective use of all police resources in the Province,
  - (ii) preservation of law and order and the prevention of panic,
  - (iii) control and direction of traffic on highways, roads and streets,

<sup>29</sup> See the Public Safety Canada webpage “Search and Rescue Committees,” <https://www.publicsafety.gc.ca/cnt/mrgnc-mngmnt/rspndng-mrgnc-vnts/nss/src-crs-en.aspx> (accessed 29 March 2022).

<sup>30</sup> Nova Scotia Emergency Management Act, Chapter 8 of the Acts of 1990 as amended by 2005, c. 48, ss. 1–6; 2007, c. 10, s. 2; 2009, c. 12 2011, c. 9, ss. 4–15; 2014, c. 34, s. 6, <https://beta.novascotia.ca/government/emergency-management-office/legislation>.

<sup>31</sup> The Regulations are made under s. 25 of the Emergency Management Act SNS 1990, c 8 OIC 71-764 (effective August 10, 1971), NS Reg 82/1971 amended to OIC 2003-145 (effective April 4, 2003), NS Reg 82/2003, <https://www.novascotia.ca/JUST/REGULATIONS/regs/emcivil.html>.

## Communications Interoperability and the Alert Ready System

- (iv) patrol of restricted areas and the safeguarding of vital resources and services;
- (d) prepare an Emergency Police Services Planning Guide outlining the principles and procedures which are to be followed by all the police of the Province and issue a copy to all concerned.

The Nova Scotia Emergency Management Office (EMO) is situated within the Department of Municipal Affairs and Housing and has a role that is similar to Public Safety Canada, working with municipalities, other provincial departments, and partners involved in critical infrastructure. As the body responsible for emergency planning and coordinating emergency responses in the province, the EMO also helps with analysis and evaluation after an emergency. The EMO also administers the provincial emergency 911 service.

The EMO website lists its own responsibilities as:

- providing integrated emergency planning and coordination with municipalities;
- supporting municipal authorities in emergency preparedness and planning;
- administering the emergency 911 service;
- providing public education and awareness about emergencies;
- working with volunteer organizations to support emergency responses;
- administering disaster financial assistance programs.<sup>32</sup>

Although a copy of the Nova Scotia Emergency Management Plan is not publicly available, in 2014 the EMO produced a guide for Community Event Emergency Response Planning with a focus on gathering events in Nova Scotian communities. This guide highlighted the requirement for a communications plan. Recommended elements of the Communications Plan included the following:

- Ensure contact lists and numbers are readily available for all event organizers, as well as emergency coordination and first response personnel.
- Determine what public communication systems will be used and how emergency communications will be delivered to event attendees (including pre-scripted messaging to be delivered in the event of an emergency).
- Determine how and who will manage the media.
- The event plan should clearly identify the roles and responsibilities of event and municipal public information (media) staff, including strategies on media releases, triggers to engage a media center and opportunities for event and municipal communications staff to work together to insure accurate and timely information flows.<sup>33</sup>

<sup>32</sup> See the EMO webpage “Emergency Management Office: About Us,” <https://beta.novascotia.ca/government/emergency-management-office/about> (accessed 29 March 2022).

## Communications Interoperability and the Alert Ready System

## 2.6. Summary

Emergency Management entails an organized systematic approach to addressing emergencies. It includes all activities and risk management measures related to prevention and mitigation, preparedness, response, and recovery. In Canada, emergency management adopts an all-hazards approach to address both natural and human-induced hazards and disasters. Effective implementation of the four phases/pillars of emergency management should be informed by evidence-based risk assessment, strong public awareness, and community engagement, all of which are key attributes of societal resilience.

Although SOREM works to harmonize and improve emergency practices across the country, provinces, territories, and individual jurisdictions are responsible for developing and maintaining their respective emergency management programs, in alignment with the Emergency Management Framework for Canada, based upon regional threats, risks, and priorities.

## 3. Emergency Communications

As outlined in the Communications Interoperability Strategy for Canada (CISC), emergency communications is generally defined as “the ability of emergency responders to exchange information via data, voice, and video, on demand, in real time, as needed, and as authorized, to complete their missions.”<sup>34</sup> An enabler to effective response, emergency communications consists of:

- **Operability:** The ability of emergency personnel to establish and sustain communications in support of mission operations.
- **Interoperability:** The ability of emergency personnel to communicate between jurisdictions, disciplines, and levels of government, using a variety of systems.
- **Continuity of Communications:** The ability of emergency response agencies to maintain communications in the event of damage to, or destruction of, the primary infrastructure.”<sup>35</sup>

Emergency communications also includes communication capabilities such as Alert Ready and other means to share information with the community. Alert Ready usage and associated challenges are examined further in Section 4 below.

### 3.1. Emergency Responder Communications

Emergency responders rely upon robust communications capabilities and protocols to exchange information during the conduct of their routine and emergency response operations. The primary emergency responder capabilities typically used during an emergency include but are not limited to:

- a dispatch centre and emergency communicators;

<sup>34</sup> Public Safety Canada. (2011). “Communications Interoperability Strategy for Canada” (“CISC”) (January 2011), <https://www.publicsafety.gc.ca/cnt/rsres/pblctns/ntrprblt-strtg/index-en.aspx#cisc-E>.

<sup>35</sup> Ibid, p. 3.

## Communications Interoperability and the Alert Ready System

- an emergency responder radio system;
- mobile data terminals; and
- service-issued and/or personal mobile telephones, computer, Be On Look Out (BOLO) messages, etc. (BOLOs are typically issued using mobile data terminals where available but can be shared using other voice and data communications capabilities.)

The effectiveness of these capabilities during an emergency scenario can be influenced by the scope of emergency preparedness activities and the degree to which communications interoperability is established within a given jurisdiction, and with adjacent jurisdictions. This includes appropriately trained personnel (emergency response and emergency communications), robust procedures, and supporting technologies. Many jurisdictions continue to strive for improved communications interoperability. However, these efforts are frequently constrained by a lack of joint planning and procurement, a lack of joint standard operating procedures, insufficient training opportunities, and resourcing challenges. Communications interoperability concepts and challenges are addressed in more detail in Section 5 of this report.

### 3.2. Public Alerting

Public alerting, also known as emergency alerting, is distinct from emergency responder communications but is an equally important emergency communications tool for ensuring the safety of people at risk of emergencies or disaster events. The principle involves urgency to communicate with anyone who is at risk, whether they are local residents, businesses, or visitors to any given area. This principle was a significant influence in the creation of a National Alerts Aggregation and Dissemination (NAAD) System and Alert Ready (see Section 4).

In Canada, alerts are authenticated and collated by the NAAD System operated by Pelmorex Corporation. The official public alerting system in Nova Scotia is Alert Ready, which is the operational implementation of the NAAD System. In contrast, however, in Alberta, alerts are disseminated by the Alberta Emergency Alert system, an independent platform designed and operated by the Province of Alberta separate from the NAAD System.

In Canada, only authorized government agencies are permitted to issue emergency alerts through Alert Ready. In most provinces and territories, they are issued by P/T emergency management entities and those designated as alerting authorities, such as Environment Canada.

Historically, police services across Canada relied heavily on traditional (radio and television) news media releases and news conferences to share important information with the public. It was not until 2002 that the Amber Alert program, which can be used only by authorized law enforcement, came to Alberta and then subsequently to the rest of Canada.<sup>36</sup> Increasingly, however, public safety and emergency responders augment their communications with the public during emergencies with a range of other tools that include social media, webpages, specialized alerting applications, and roadside signage.

<sup>36</sup> See Canadian Centre for Child Protection. (2019). “What is an AMBER Alert?” <https://missingkids.ca/en/help-us-find/amber-alert/> (accessed 29 March 2022).

## Communications Interoperability and the Alert Ready System

Around 2010–2011, police services begin to expand their information dissemination practices to include social media.<sup>37</sup> Although police-related public warnings are slowly evolving toward Alert Ready, the use of social media (typically Twitter) is often still viewed as the quickest and easiest means to alert the public, and it remains a common practice in many jurisdictions. For example, On February 22, 2022, Ottawa Police Service responded to an armed robbery call at the Rideau Centre (one of Ottawa’s largest shopping centres),<sup>38</sup> and Twitter was the primary means of alerting the public during this incident. A formal alert via Alert Ready was not issued.

The June 2014 active shooter event in Moncton, New Brunswick illustrated the value of social media for public alerting, as noted by an independent reviewer of the RCMP:

Given the timing of the incident, approximately 19:20 on June 4, traditional media was not the immediate channel to get information to the public. The radio stations in Moncton had either switched to national programming or were automated (meaning the broadcast was pre-recorded). The daily newspaper would not be out until the following morning and their online service is subscriber based, meaning it was not freely accessible to the general public. The television evening news was over for the day and the next local TV broadcast was not for another three to four hours.

This meant that social media was the quickest and most effective way to reach people in the shortest period of time. Given the seriousness of the incident, it was anticipated the information would be shared rapidly and to a wide audience. That was exactly what happened, with followers to the RCMPNB and GRCNB feeds on Twitter and Facebook climbing at a staggering rate during the incident. Fortunately, “J” Division has been using social media for the past five years and had built an audience. The Strategic Communications team has experience using social media in a variety of incidents and knew the potential it had in reaching a wide audience.

It is recognized that social media (Twitter and Facebook) is being utilized by RCMP Communications sections on a regular basis. In this case, it was extremely valuable when used in conjunction with news releases, news conferences and media availabilities as ways to communicate directly to the public. It helped build credibility and maintained the organization's reputation as an accurate and authoritative source for information during this crisis.<sup>39</sup>

The use of any of these systems and capabilities during an emergency should be based on well-established policy and procedures.

#### 4. Alert Ready

Alert Ready is the brand name of Canada’s first National Public Alerting System (NPAS), which launched in 2014 as a F/P/T initiative, enabling emergency management organizations across

<sup>37</sup> Christopher J. Schneider. (2016). *Policing and Social Media: Social Control in an Era of New Media*. Lanham, MD: Lexington Books.

<sup>39</sup> Alphonse MacNeil. (2015). “Independent Review: Moncton Shooting—June 2, 2014.” Royal Canadian Mounted Police (16 January 2015), <https://www.rcmp-grc.gc.ca/en/independent-review-moncton-shooting-june-4-2014#sec8> (accessed 29 March 2022).

## Communications Interoperability and the Alert Ready System

Canada to warn the public about imminent dangers such as floods, tornados, hazardous materials, fires, and other disasters. Efforts to develop this modernized all-hazards, all-media NPAS in Canada date back to the 2007 release of a set of decisions by the Canadian Radio-television and Telecommunications Commission (CRTC).<sup>40</sup> A chronology of these efforts can be found on the Public Safety Canada website.<sup>41</sup>

Alert Ready was developed by F/P/T emergency management officials (SOREM), Environment and Climate Change Canada, Pelmorex Corporation, the broadcasting industry, and wireless service providers. Municipal emergency management organizations and first responder agencies were not part of these development efforts.

On April 6, 2017, the Canadian Radio-television and Telecommunications Commission (CRTC) “directed all wireless service providers to implement a wireless public alerting system on their LTE (longer-term evolution) networks by April 2018”.<sup>42</sup> This system would “allow emergency management officials, such as fire marshals and police agencies, to warn Canadians on their mobile devices of dangers to life and property.”

Alert Ready provides the capability for authorized and trained F/P/T emergency management organizations to rapidly warn the public of imminent or unfolding, life threatening events via radio, television, and compatible, connected wireless devices. Alert Ready supports multiple types of alerts defined under the categories of: Fire, Biological, Hazardous, Environmental, National Security, Civil and Admin (Test Messages). The events of April 2020 fall into the Civil category.

Prior to the NPAS, Alberta was the only province in Canada that had developed its own province-wide emergency warning system.<sup>43</sup> Alberta continues to operate its own system and has granted at least one municipal entity, Calgary Emergency Management Agency (CEMA) direct access.

#### 4.1. How Alert Ready Works

Alert Ready does not require any action from the public, other than the requirement to have either a radio or television on, or to have a compatible, connected, mobile device on. Unlike messages disseminated by Twitter (which requires individuals to follow a specific feed/Twitter account) and similar social media platforms, members of the public will receive the alert if they have a radio or television turned on or have a compatible mobile device turned on and receiving signals from a wireless radio site. It is not possible for an individual or a household to opt out of receiving Alert Ready notifications, except insofar as all radios, televisions, and mobile devices

<sup>40</sup> Gow, “Public Alerting in Canada” (cited above n 1).

<sup>41</sup> Public Safety Canada. (2020). “Chronology: National Public Alerting in Canada” (updated 21 August 2021), <https://www.publicsafety.gc.ca/cnt/mrgnc-mngmnt/mrgnc-prprdnss/ntnl-pblc-lrtng-sstm-chr-en.aspx?wbdisable=true> (accessed 29 March 2022).

(2017). “Wireless Service Providers Must Join the National Public Alerting System.” News release (6 April 2017), [https://www.canada.ca/en/radio-television-telecommunications/news/2017/04/wireless\\_serviceprovidersmustjointhenationalpublicalertingsystem.html](https://www.canada.ca/en/radio-television-telecommunications/news/2017/04/wireless_serviceprovidersmustjointhenationalpublicalertingsystem.html).

<sup>43</sup> Gow, “Public Alerting in Canada” (cited above n 1).

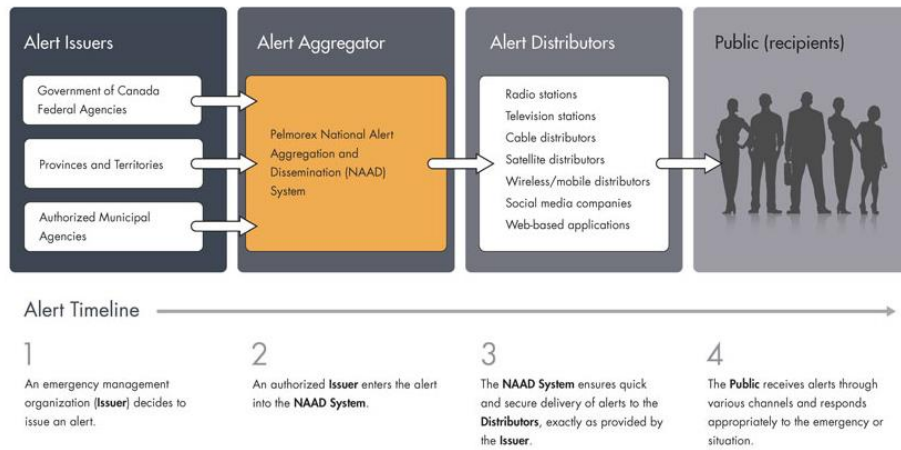

Communications Interoperability and the Alert Ready System

can be powered off. When an alert becomes audible, members of the public can take action as directed by the issuer of the alert.

Only trained, authorized individuals within Alert Ready partner organizations are permitted to issue alerts. The alert issuer has several responsibilities, including formatting the alert message, selecting the type of alert, the language (English and/or French, plus a third option, chosen from Cree, Dene, Inuinnaqtun, and Inuktitut), as well as the target geographic broadcast area.

Once an alert is issued, it processes through the National Alert Aggregation and Dissemination System (NAAD), operated by Pelmorex Corporation. The NAAD confirms that the alert originates from an authorized user and is correctly formatted. The alert then proceeds to the radio, television, cable, and wireless companies that are alert distributors. Based on location information in the alert, the alert distributors control where the alert is broadcast.

Figure 4: The Alert Ready Information Flow Process

Source: Public Safety Canada webpage, "National Public Alerting System"

#### 4.2. How Alert Ready Is Governed

Governance of the Alert Ready system involves several stakeholder partners, including provincial, territorial, federal government organizations and emergency management officials, the operator of the National Alert Aggregation and Dissemination System (NAAD System), and alert distributors (radio, television and wireless providers).

The NAAD System is a component of the Weather Network and MeteoMedia Broadcast Conditions of Licence approved by the CRTC. Pelmorex is also subject to a Governance Council made up of federal officials (including Public Safety Canada and Environment of Climate Change Canada) as well as all provinces/territories and members of the broadcasting industry. The NAAD Governance Council focuses upon technical issues.

### 4.3. Alert Ready Limitations

Although Alert Ready is intended to send alerts to anyone in Canada based on established alerting criteria, some limitations can affect whether someone actually receives an alert.

1. Radios and televisions must be powered on to receive the alerts as they are issued in real time. Turning on a radio or television after the alert has been issued means that radio or television will not receive the alert (unless the alert is reissued by the original issuer or by the radio or television station). Typically, alerts are not reissued unless there is a change, in which case an update is issued.
2. Not all mobile devices are compatible with the alert broadcast.<sup>44</sup>
  - a. A mobile device must support Long Term Evolution (LTE), a fourth-generation cellular phone technology, in order to be compatible. Most smart phones fulfil this requirement, but a portion of the population may not have compatible devices. In 2020, 84.4% of Canadians owned a smartphone,<sup>45</sup> but there is no data on how many of those phones are compatible with Alert Ready. Cell phone providers have been turning off their older 2G and 3G technology so that they can reuse the frequencies for newer technology like 4G. With the old networks being shut down, the number of cell phones incompatible with Alert Ready will likely steadily decrease as people migrate to newer phones. The exact number of people who do not have a capability to receive alerts remains unknown at this time.
  - b. Operating software on compatible mobile devices must be updated regularly to ensure continued compatibility.
  - c. If a mobile device is not connected to a wireless or cellular network at the time of the alert, the alert will not be received. For example, if a phone has local wi-fi but no cellular service, the alert will not be received. If an alert is still active when a mobile device connects to a wireless site, the alert may be received at that time.
3. Alert Ready is an alerting and warning tool not designed to support ongoing information updates. Downstream methods such as traditional news conferences, media releases, social media accounts, and responder or emergency management websites support the flow of follow-on information.

### 4.4. Intended Use of Alert Ready

Alert Ready is intended to deliver critical alerts of imminent threats to life in Canada. In 2014, government officials (SOREM) developed a specific list of eight types of alerts and their sub-types that should immediately be broadcast on television, radio and wireless devices (**Table 3**). The list has not been updated since the launch of Alert Ready.

<sup>44</sup> Cellular telephone users may ascertain whether their device is compatible with Alert Ready at this link: <https://www.alertready.ca/wireless/>, where information about wireless service providers and compatible device models is provided.

<sup>45</sup> Statistics Canada. (2022). “Telecommunications: Connecting Canadians.” [https://www.statcan.gc.ca/en/subjects-start/digital\\_economy\\_and\\_society/telecommunications](https://www.statcan.gc.ca/en/subjects-start/digital_economy_and_society/telecommunications) (accessed 29 March 2022).

## Communications Interoperability and the Alert Ready System

*Table 3: Alert Ready Alert Types<sup>46</sup>*

Alert Type	Description
Fire	Urban, Industrial, Wild, Forest
Biological	Biological, Chemical, Radiological, Drinking Water, Contamination
Hazardous	Explosive
Environmental	Air Quality, Falling Object
Natural	Tornado, Flash Flood, Earthquake, Storm Surge, Landslide, Dam Overflow, Magnetic Storm, Meteorite, Lahar, etc.
National Security	Terrorist Threat
Civil	Civil Emergency, Animal Danger, Amber Alert, 911 Service
Admin	Test Message

A more complete description of these alerts is available on the Alert Ready webpage.

#### 4.5. Alert Ready Usage in Canada

Since the advent of wireless public alerting in Canada in 2018, Alert Ready has publicized annual alert type counts on the AlertReady.ca website. A breakdown of Alert Ready alerts issued by each province since 2019 is provided at <https://www.alertready.ca/alert-count/>. During its first full year of operation, the majority of alerts issued fell under the Natural and Amber Alert categories.

**Table 4** illustrates a significant change in the use of Alert Ready in Nova Scotia, in particular the Civil Emergency category, after April 2020.<sup>47</sup>

<sup>46</sup> Source: Alert Ready webpage “What Type of Alerts Are Broadcast?” <https://www.alertready.ca/alert-types/>

<sup>47</sup> Source: Mass Casualty Commission File COMM0043670, Alert Ready Use: Nova Scotia.

## Communications Interoperability and the Alert Ready System

Table 4: Alert Ready Usage in Nova Scotia (December 2015 – January 2021)

Public Facing Alerts					
Number	Date	Time (AST)	Issuer	Alert Type	Requestor
1	Dec. 16, 2015	2:54 PM	EMO	Test	N/A
2	Mar. 16, 2016	1:15 PM	EMO	Test	N/A
3	May. 4, 2016	12:54 PM	EMO	Test	N/A
4	June. 15, 2016	12:55 PM	EMO	Test	N/A
5	Sept. 21, 2016	1:54 PM	EMO	Test	N/A
6	Dec. 21, 2016	1:54 PM	EMO	Test	N/A
7	Mar. 15, 2017	1:55 PM	EMO	Test	N/A
8	May. 10, 2017	1:55 PM	EMO	Test	N/A
9	June. 21, 2017	1:55 PM	EMO	Test	N/A
10	Sept. 20, 2017	1:55 PM	EMO	Test	N/A
11	Dec. 20, 2017	1:55 PM	EMO	Test	N/A
12	Mar. 21, 2018	1:55 PM	EMO	Test	N/A
13	May. 9, 2018	1:55 PM	EMO	Test	N/A
14	Nov. 28, 2018	1:55 PM	EMO	Test	N/A
15	May. 8, 2019	1:55 PM	EMO	Test	N/A
16	Nov. 27, 2019	1:55 PM	EMO	Test	N/A
17	Apr. 10, 2020	11:00 PM	EMO	Civil Emerg.	N.S. Dept of Health & Wellness
18	Apr. 24, 2020	4:03 PM	EMO	Civil Emerg.	RCMP
19	Apr. 24, 2020	5:53 PM	EMO	Civil Emerg.	RCMP
20	May. 6, 2020	4:32 PM	EMO	Missing Person	Truro Police
21	May. 7, 2020	8:54 AM	EMO	Missing Person	Truro Police
22	June. 5, 2020	23:57 PM	EMO	Civil Emerg.	N.S. Dept. of Justice
23	June. 6, 2020	10:59 AM	EMO	Civil Emerg.	N.S. Dept. of Justice
24	July. 21, 2020	6:17 AM	EMO	Civil Emerg.	Bridgewater Police
25	Aug. 1, 2020	1:41 AM	EMO	Civil Emerg.	New Glasgow Police
26	Oct. 20, 2020	1:13 PM	EMO	Civil Emerg.	Amherst Police
27	Oct. 20, 2020	1:41 PM	EMO	Civil Emerg.	Amherst Police
28	Oct. 30, 2020	2:33 PM	EMO	Civil Emerg.	New Glasgow Police
29	Oct. 30, 2020	9:30 PM	EMO	Civil Emerg.	New Glasgow Police
30	Nov. 25, 2020	1:55 PM	EMO	Test	N/A
31	Jan. 6, 2021	11:42 AM	EMO	Civil Emerg.	RCMP
32	Jan. 6, 2021	12:05 PM	EMO	Civil Emerg.	RCMP
33	Jan. 18, 2021	1:36 PM	EMO	Civil Emerg.	RCMP
34	Jan. 18, 2021	7:19 PM	EMO	Civil Emerg.	RCMP
35	Jan. 20, 2021	11:34 PM	EMO	Civil Emerg.	RCMP

The increased use of Alert Ready for Civil Emergencies observed in Nova Scotia since April 2020 is also evident in many other provinces and territories.<sup>48</sup>

#### 4.6. Alert Ready Training and Exercises

Responsibility for providing Alert Ready training for alert issuers falls to provinces and territories.

F/P/T Emergency Management Partners identified public alerting training standards as an “upcoming priority” at an Information Day on Public Alerting event hosted by the Canadian Association of Broadcasters on October 3, 2017.<sup>49</sup> This presentation also referred to a recent NAAD System upgrade with the addition of a training environment “to allow Authorized

<sup>48</sup> See the Alert Ready “Alert Count”: <https://www.alertready.ca/alert-count/>.

<sup>49</sup> Emergency Management Partners in Collaboration with the Government of Canada. (2017). “Information Day on Public Alerting” (3 October 2017), [https://www.cab-acr.ca/english/whatsnew/presentation\\_oct0317.pdf](https://www.cab-acr.ca/english/whatsnew/presentation_oct0317.pdf).

## Communications Interoperability and the Alert Ready System

Government Agencies to train and test without alerts reaching the public.” Of note, within the presentation deck is a question posed to the Information Day participants with respect to training: “Do you currently receive guidance (training, certification, manuals, guidelines, policy, and standard operating procedures) to adequately perform your duties as they relate to NPAS?”<sup>50</sup> The answers provided to this question are not publicly available.

Limited information associated with Alert Ready training is available within the public domain, but a 2020 report by the Office of the Provincial Security Advisor contains references to Ontario’s training approach.<sup>51</sup>

Alert Ready training material in place for Nova Scotia was not available for review.

#### 4.7. Alert Ready Changes and Improvements

Since initial deployment of Alert Ready, emergency management organizations and jurisdictions have implemented a number of changes to improve public alerting. The mass casualty in April 2020 appears to have been one of the most significant catalysts for a number of recent changes. Changes and improvements of note include:

- June 2020: Public Safety Canada and several provincial and territorial emergency management organizations began discussions to provide police services with direct access to the alert system.<sup>52</sup>
- October 2020: The Royal Canadian Mounted Police (RCMP) in New Brunswick gained direct access to the NAAD to issue policing alerts and AMBER Alerts. All municipal police services in New Brunswick will work through the RCMP should an emergency alert be required.<sup>53</sup>
- July 2021: The Nova Scotia RCMP and Halifax Regional Police (HRP) announced that they now have direct access to the Alert Ready System.<sup>54</sup> Direct access authorizes police to issue alerts without assistance from the EMO (Emergency Management Organization). RCMP and HRP have been trained to use the system and can send an alert for police situations where there is believed to be an imminent threat to the public. The option is now available to other policing services across the province of Nova Scotia, when and if they choose.

## Communications Interoperability and the Alert Ready System

- August 2021: Canadian Association of Chiefs of Police (CACP) approved a Resolution to review the CISC, including prioritizing the National Public Alert System.<sup>55</sup>
- September 2021: The Province of Prince Edward Island announced that the RCMP and all municipal police forces would be able to issue public alerts through Alert Ready.<sup>56</sup>
- November 2021: The Province of British Columbia reviewed its use of the national Alert Ready system with a view to expanding its use beyond tsunami warnings.

#### 4.8. Other Public Alerting Solutions

In the absence of a comprehensive strategy and approach to public alerting, jurisdictions have the discretion to create their own tools to address public alerting. Alert Ready is now one of many solutions available to deliver alerts or notifications to the public. An overview of select additional systems currently used to support public alerting across Canada is provided below:

**Alberta:** Alberta was the first and only province in Canada to develop its own province-wide emergency warning system, Alberta Emergency Alert.<sup>57</sup> Alberta continues to use its own system and has granted the Calgary Emergency Management Agency (CEMA) direct access.

The province of Alberta practises a multi-pathways approach to disseminating emergency information and alerts. Besides Alert Ready, the province also hosts its own Alberta Emergency Alert app, which when installed on a smart phone will deliver alert notifications from the province. The exact number of Albertans who have downloaded this application is unknown. Alerts may be critical or informative, users can configure the level of notifications they receive and whether the app overrides do-not-disturb settings on their device. The province also leverages social media such as Twitter and Facebook to deliver information. When an alert is broadcasted, according to the province's overview webpage,<sup>58</sup> it:

- sends alerts to subscribed mobile devices in affected areas through the Alberta Emergency Alert app
- interrupts radio and TV stations in Alberta
- appears on social media platforms such as:
  - Facebook
  - Twitter
  - RSS feeds
- appears on:
  - the Alberta Emergency Alert webpage

<sup>55</sup> Resolution 2021-06. See Canadian Association of Chiefs of Police (CACP). (2021). "Resolutions Adopted at the 116<sup>th</sup> CACP Annual General Meeting." News release (23 September 2021), <https://www.princeedwardisland.ca/en/news/government-and-policing-services-make-changes-to-alert-ready-system> (accessed 31 March 2022).

<sup>57</sup> See the webpage "Alberta Wireless Public Alerting," <https://www.alberta.ca/wireless-public-alerting.aspx>.

<sup>58</sup> Ibid.

## Communications Interoperability and the Alert Ready System

- the Alberta Motor Association road reports webpage
- digital highway billboards

The webpage also details how users of the Emergency Alert App can set preferences, including:

- which areas you receive alerts for—only your location, your location and selected areas, or the entire province
- different tones for informational alerts
- If a disaster also affected cellular towers in your area, you can still receive an alert if your device is connected to Wi-Fi.<sup>59</sup>

**Social Media:** Most government departments, agencies, and organizations, as well as most public and private organizations, have established Twitter and Facebook accounts to disseminate information to the public. These organizations may have their own emergency alerting system while also participating in Alert Ready. For example, Environment Canada issues notifications through Alert Ready but also issues alerts through their own weather app and through their Twitter accounts.

**Mass Notification Systems (MNS) and Emergency Notification Systems (ENS):** There are numerous public and private alerting solutions often referred to as Mass Notification Systems (MNS) or Emergency Notification Systems (ENS). Operated by municipalities, businesses, universities, airports, schools and special interest groups, they serve both internal and external recipients. For example, municipalities may use these for staff notifications, as well as for residents to subscribe to information notifications and alerts.

Typically, users may have multiple contact methods, including landline telephones, wireless devices and email. The system can try one or all of the contact methods. Depending on the system and its configuration, there may be a two-way capability for recipients to indicate they received the alert and communicate their own anticipated actions.

Depending on the system and the owner's requirements, alerts can be targeted based on location, or they be sent to all registered users, regardless of where the users are at any given time. This means that someone who is travelling may still receive alerts about what is happening back home, in the office, or on the university campus.

#### 4.9. Summary

Ultimately, there are numerous means for alerting the public. In the absence of a singular recognized authoritative tool, there is a risk that the appropriate technologies and supporting procedures may not be in place to support a comprehensive and cohesive public alerting strategy. In 2014, Alert Ready was introduced and implemented as Canada's nation-wide system for public alerting. As Canada's National Public Alerting System (NPAS), Alert Ready provides the capability for authorized and trained F/P/T emergency management organizations to warn the

---

<sup>59</sup> Ibid.

public of imminent or unfolding life-threatening events, via radio, television and compatible, connected, wireless devices.

The Alert Ready system supports multiple types of alerts under the following categories: Fire, Biological, Hazardous, Environmental, Natural, National Security, Civil and Admin. Historically, Alert Ready has been used predominantly for natural hazard incidents and Amber Alerts. This has led to challenges in advising the public of other significant incidents or emergencies. Such challenges have been compounded by a lack of comprehensive standard operating procedures and limited training and exercising for key stakeholders.

Although there are some technical limitations with Alert Ready, current practices and the use of Alert Ready in Nova Scotia is not considered a technology issue.

A number of positive changes and improvements have been implemented since April 2020 to improve public alerting practices and the use of Alert Ready during emergencies. Additional changes and improvements are ongoing or pending.

## 5. Communications Interoperability

This section of the report introduces key concepts associated with communications interoperability, with a focus on the five lanes/elements of the interoperability continuum: Governance, Standard Operating Procedures, Technology, Training and Exercises, and Usage.

As introduced in Section 3, the Communications Interoperability Strategy for Canada defines communications interoperability “as the ability of emergency personnel to communicate between jurisdictions, disciplines, and levels of government, using a variety of systems, as needed, and as authorized.”<sup>60</sup> In simple terms, interoperability provides a means for sharing information with the right people at the right time. Communications interoperability became a priority in the United States following the terrorist attacks of September 11, 2001. It led to the development of a communications interoperability program and the creation of SAFECOM, which was part of the Presidential E-Government Initiative to improve public safety interoperability, allowing emergency responders to communicate effectively before, during, and after emergencies and disasters.<sup>61</sup>

SAFECOM is a communications program of the Department of Homeland Security that provides research, development, testing and evaluation, guidance, tools, and templates on interoperable communications-related issues to local, tribal, state, and federal emergency response agencies. The Office of Emergency Communications (OEC) supports SAFECOM’s development of guidance, tools, and templates.<sup>62</sup> According to the description on the SAFECOM main webpage:

<sup>60</sup> CISC (cited above n 34), p. 3.

<sup>61</sup> See the SAFECOM webpage “About SAFECOM” (updated 2 February 2022), <https://www.cisa.gov/safecom/about-safecom> (accessed 30 March 2022).

<sup>62</sup> See the National Public Safety Telecommunications Council webpage “SAFECOM,” <https://www.npstc.org/safecom.jsp> (accessed 30 March 2022).

## Communications Interoperability and the Alert Ready System

SAFECOM is managed by the Cybersecurity and Infrastructure Security Agency (CISA). Through collaboration with emergency responders and elected officials across all levels of government, SAFECOM works to improve emergency response providers' inter-jurisdictional and interdisciplinary emergency communications interoperability across local, regional, tribal, state, territorial, international borders, and with federal government entities. SAFECOM works with existing federal communications programs and key emergency response stakeholders to address the need to develop better technologies and processes for the coordination of existing communications systems and future networks.

Through these partnerships, SAFECOM has created key documents such as the Interoperability Continuum, the Statement of Requirements (SoR) for baseline communications and interoperability standards, the Statewide Communication Interoperability Plan (SCIP) Methodology, and the National Emergency Communications Plan (NECP) to assist emergency responders nationwide with improving communications and interoperability.<sup>63</sup>

Gaps in communications interoperability predate 9/11 and have been a longstanding challenge for public safety agencies everywhere, including in Canada. The 2003 Public Safety Radio Communications Project Report, known as the "L'Abbé Poirier Report," detailed the lack of cohesive strategic planning and policy development in relation to spectrum resource requirements, standards and funding, among other shortcomings.<sup>64</sup> This report served as a catalyst to examine and address communications interoperability requirements in greater detail and in a more cohesive manner. Efforts to achieve communications interoperability in Canada can be traced back to concerted grassroots efforts of committed first responders.

In 2011, the CISC described the then-recent progress:

In 2007, the Canadian Association of Chiefs of Police (CACCP), Canadian Association of Fire Chiefs (CAFC), and Emergency Medical Services Chiefs of Canada (EMSCC) joined forces with the Canadian Police Research Centre (CPRC) to create the Canadian Interoperability Technology Interest Group (CITIG). This initiative brought together representatives from public safety, industry, academia, government, and non-governmental organizations to work collectively on the future of Canadian public safety interoperability. This initiative also led to the development of the Canadian Communications Interoperability Plan (CCIP), which set out a strategy to improve local and regional capacity to interoperate using the Interoperability Continuum.<sup>65</sup>

Subsequently in 2012, the CITIG transitioned into a stand-alone not-for profit corporation under the governance of the CACP, Canadian Association of Fire Chiefs, and Paramedic Chiefs of Canada, with a mission: to improve Canadian public safety interoperability at home and abroad through collaborative efforts, innovation and leadership. CITIG was comprised of more than 1,200 volunteer associates from across Canada, the United States and internationally and was recognized as an advisory body to SOREM on the issue of communications interoperability.

<sup>63</sup> SAFECOM homepage, <https://www.cisa.gov/safecom> (accessed 30 March 2022).

<sup>64</sup> RPB Associates and L'Abbé Consulting. (2003). "Public Safety Radio Communications Project: Final Report." Industry Canada (March 2003), as described in the CISC (cited above n 34), p. 2.

<sup>65</sup> CISC (cited above n 34), p. 2.

## Communications Interoperability and the Alert Ready System

However, CITIG ceased formal operations in 2020. Interoperability advocacy efforts continue through the CACP Information, Communications, and Technology (ICT) committee.<sup>66</sup>

In 2010–2011, Public Safety Canada and SOREM, together with public safety and emergency management experts from F/P/T governments, chiefs of police, fire, paramedic services, and many other stakeholders, developed the CISC based on CITIG’s foundational work on the CCIP. The Strategy outlines five key strategic objectives (frequently referred to as “lanes” by the practitioner community) for improving communications interoperability between public safety partners: governance, standard operating procedures, technology, training and exercises, and ongoing usage.

Successful implementation of the CISC will enable the various F/P/T levels of government to work collaboratively and in an integrated manner, with all those agencies having an emergency role. The CISC is equally applicable to daily operations and times of crisis or emergency. [...] The expected results [from implementing the CISC at the local level] are more efficient use of resources and capabilities, improved service to the public and better outcomes, and a safer operating environment for emergency workers. The CISC sets in place the conditions that will enhance interoperability when required. In this context, the CISC supports day-to-day operations, the execution of planned events, the response to local regional, national, and international emergencies, and the components of the Interoperability Continuum.<sup>67</sup>

The CISC included plans for review and revision in consultation with key stakeholders every three years, or more frequently if necessary. However, the CISC has not been formally updated since 2011. A review and update of the CISC may be warranted.

### 5.1. The Communications Interoperability Continuum

With the introduction of the Communications Interoperability Strategy, Canada followed the US lead in developing a national communications plan. The US equivalent to the CISC is the National Emergency Communications Plan (NECP), first released in 2008 and most recently in 2019.<sup>68</sup> Developed by the Department of Homeland Security, the NECP

establishes a shared vision for emergency communications and assists those who plan for, coordinate, invest in, and use operable and interoperable communications for response and recovery operations. This includes traditional emergency responder disciplines and other partners from the whole community that share information during incidents and planned events.<sup>69</sup>

<sup>66</sup> See the CACP webpage “Information & Communications Technology Committee,” <https://www.cacp.ca/information-communication-and-technology-committee.html> (accessed 30 March 2022).

<sup>67</sup> CISC (cited above n 34), p. 4.

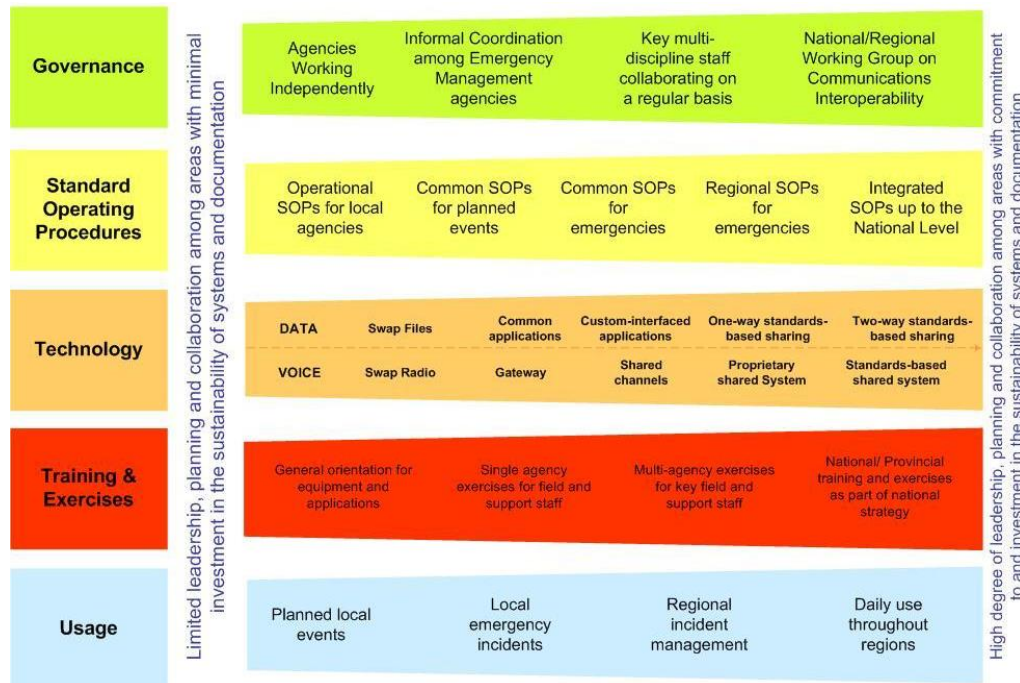

<sup>68</sup> Cybersecurity and Infrastructure Security Agency (CISA). (2019). “National Emergency Communications Plan.” Department of Homeland Security (September 2019), [https://www.cisa.gov/sites/default/files/publications/19\\_0924\\_CISA\\_ECD-NECP-2019\\_1\\_0.pdf](https://www.cisa.gov/sites/default/files/publications/19_0924_CISA_ECD-NECP-2019_1_0.pdf) (accessed 30 March 2022).

<sup>69</sup> CISA webpage “National Emergency Communications Plan,” <https://www.cisa.gov/necp> (accessed 30 March 2022).

Communications Interoperability and the Alert Ready System

In developing the CISC, Canada adopted a communications interoperability continuum based on the same five objectives developed by SAFECOM and outlined in the NECP: Governance, Standard Operating Procedures, Technology, Training and Exercises, and Usage.<sup>70</sup> The Canadian Interoperability Continuum (**Figure 5**) and its associated objectives are presented in Annex 1 of the CISC and introduced below.

Figure 5: Canadian Communications Interoperability Continuum

Source: Public Safety Canada, “Communications Interoperability Strategy for Canada” (2011), Annex 1

The strategic objectives associated with each of the five lanes of the Continuum are described in the CISC in the following terms:

**Governance:**

- Establish a governance structure and coordination framework that respects jurisdictional authorities and is empowered, resourced, representative, and accountable.

<sup>70</sup> SAFECOM. (2021). “Interoperability Continuum: A Tool for Improving Emergency Response Communications and Interoperability.” Cybersecurity and Infrastructure Security Agency, Department of Homeland Security (June 2021), [https://www.cisa.gov/sites/default/files/publications/21\\_0615\\_cisa\\_safecom\\_interoperability\\_continuum\\_brochure\\_final.pdf](https://www.cisa.gov/sites/default/files/publications/21_0615_cisa_safecom_interoperability_continuum_brochure_final.pdf) (accessed 30 March 2022).

## Communications Interoperability and the Alert Ready System

- Recognizing that each community has specific needs and priorities, and few have the financial resources and the awareness of interoperability issues to coordinate effectively with other communities, provincial organizations, and with the appropriate federal programs. A framework outlining where decisions are made will provide an awareness of jurisdictional responsibility.

**Standard Operating Procedures (SOPs):**

- Promote the development of integrated SOPs.
- Currently, there is no nationwide system to develop, promote, or evaluate SOPs.
- Organizations establish interoperability with SOPs that are familiar to and practised by all responders.
- Procedures must be jointly developed and evaluated.

**Technology:**

- Technology provides only a part of the interoperability solution.
- Promote and support the development of national public safety communications systems based on common user requirements and open standards and a system of systems approach.
- Promote the adoption of open data exchange standards and support public safety agencies in the adoption of these standards.
- Testing and evaluation of emergency communications technology is currently done on an ad hoc basis. A capability-based planning approach is required with results to be available centrally for all potential users.

**Training and Exercises:**

- Enable and support comprehensive and integrated training and exercises.
- In order for interoperability to be effective, the usage of the equipment and familiarity of procedures occurs through regular training and exercises. This will help establish and maintain competency and familiarity between and across jurisdictions.

**Usage:**

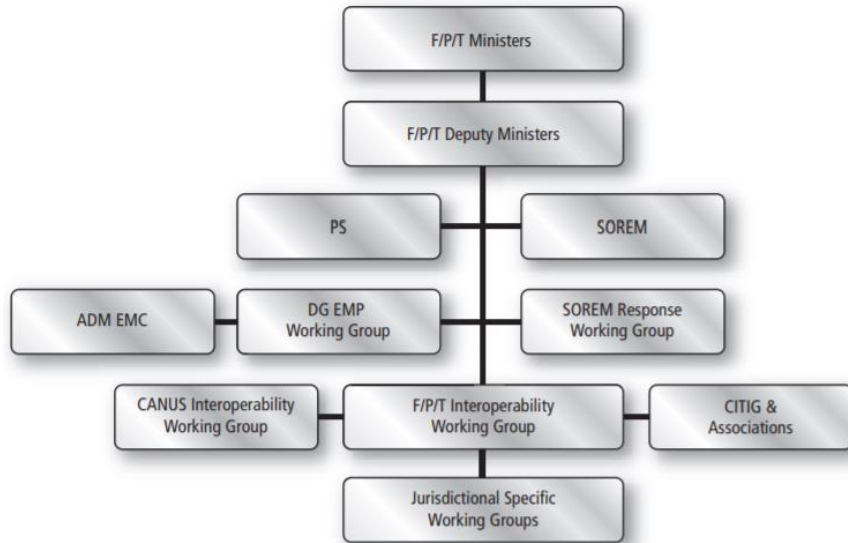

- Promote development and daily use of common processes, principles, and tools by all emergency personnel.

**5.2. Governance**

The current CISC highlights SOREM (in partnership with Public Safety Canada) as the primary body responsible for promoting and championing communications interoperability and advancing the CISC Action Plan. The graphic below is the governance model contained in the current CISC.

Communications Interoperability and the Alert Ready System

Figure 6: Interoperability Governance

Source: Public Safety Canada, "Communications Interoperability Strategy for Canada" (2011), p. 6

The roles of bodies in the Figure above with an interoperability responsibility or function are described in the CISC; a select few of the descriptions are provided below:<sup>71</sup>

**Senior Officials Responsible for Emergency Management (SOREM):** In addition to its role related to Emergency Management more broadly, in support of communications interoperability, SOREM also:

- Sets out the strategic direction of the CISC and provides the single point of coordination among the national players in support of its implementation.
- Sets the priorities for activities identified in the Action Plan based on recommendations from the SOREM Response Working Group.
- SOREM is responsible for the implementation of the CISC, the execution of the Action Plan, and recommending improvements to the F/P/T Deputy Ministers for approval.
- SOREM will review and monitor the implementation of the Action Plan annually.

**SOREM Response Working Group:** The SOREM Response Working Group is responsible for facilitating the implementation of all aspects of the CISC. This Working Group provides oversight and guidance to the F/P/T IWG.

<sup>71</sup> CISC (cited above n 34), p. 7.

**Federal/Provincial/Territorial Interoperability Working Group (F/P/T IWG):** Public Safety co-chairs this working group with a co-chair from a province or territory. The F/P/T IWG engages with other stakeholders (e.g. other government departments, emergency service organizations, the private sector, non-governmental organizations, and U.S. DHS) to ensure the CISC remains relevant and continues to reflect the principles approved by Ministers Responsible for Emergency Management. It is the responsibility of provinces and territories to lead communications interoperability activities in their respective jurisdictions. The F/P/T IWG will report to SOREM annually, or more frequently if necessary, on the progress in implementing the Action Plan and will make recommendations for amendments.

### 5.3. Communications Interoperability Action Plan for Canada

In addition to the Communications Interoperability Strategy for Canada, a supporting Communications Interoperability Action Plan was developed with a number of tangible action items designed to assist in achieving the strategic objectives of the CISC. The current Action Plan is for 2013–14.<sup>72</sup>

Action items of note include Action Item 8: Support implementation of the National Public Alerting System (NPAS). As the work of this group is not public, it is unclear if SOREM and the various working groups have completed their work associated with this action item. An update to the Communications Interoperability Action Plan may be warranted.

### 5.4. Challenges and Barriers to Achieving Communications Interoperability

Although the Communications Interoperability Strategy provides a general framework to assist jurisdictions in enhancing communications interoperability in Canada, the current approach lacks a robust national program and the resources necessary to support significant and fundamental improvements. The same can be claimed for most provincial and territorial programs. Ultimately, the level of interoperability achieved by any given jurisdiction relies on “a high degree of leadership, planning and collaboration among areas with commitment to and investment in the sustainability of systems and documentation.”<sup>73</sup> Despite the efforts of various F/P/T stakeholders, communications interoperability and emergency communication capabilities are limited in many jurisdictions across Canada.

Although the CISC and various initiatives identified in the supporting Action Plan (including Alert Ready) provide a framework for effective emergency communications and interoperability, achieving the CISC strategic objectives remains a challenge. This can be attributed to the lack of formal national program, the lack of explicit provincial/territorial communications interoperability requirements (based on all five lanes of the interoperability continuum) and funding challenges at all levels of government. Until these issues are addressed, limitations in

<sup>72</sup> Public Safety Canada Interoperability Sub-Working Group (IWG) and Communications Interoperability Strategy for Canada Working Group. (2013). “Communications Interoperability Action Plan for Canada” (March 2013), <https://www.publicsafety.gc.ca/cnt/rsres/pblctns/ntrprblt-ctn-pln/ntrprblt-ctn-pln-eng.pdf> (accessed 30 March 2022).

<sup>73</sup> CISC (cited above n 34), p. 9.

Communications Interoperability and the Alert Ready System

communications interoperability and emergency communication capabilities for both emergency responders and public alerting during critical incidents are likely to persist.

## Preface

There are aspects of my experience as a police officer that have some relevance to the subject matter of this report. The day-to-day duties of a police officer, in both a rural and urban context, are within my experience. I worked as a police officer in the RCMP in a detachment with a complement of 25 police officers, and in a municipal police department with a complement of three officers with no civilian support. My longest, and most formative period of service was 25 years in a municipal police department in New Brunswick with a complement that fluctuated between 95 and 125 police officers during the time I was there. I progressed through the ranks in that department, spending my final nine years at the executive ranks of Deputy Chief (2 years) and Chief of Police (7 years). After my retirement in July of 2012, I did not work for another police agency.

As a police officer and police supervisor, I worked along side police agencies from neighbouring jurisdictions, both municipal police departments and RCMP, on day-to-day policing operations. My assignments were in patrol, street crime, community policing, criminal investigations, and professional standards. I was a member and team leader of the Emergency Response Team for 14 years.

At the executive level I worked closely with senior police officers from agencies across Canada, both municipal and RCMP. As a Chief of Police, I was a member of the Provincial Executive Committee (PEC) of Criminal Intelligence Service New Brunswick (CISNB), one of the ten provincial bureaus of Criminal Intelligence Service Canada (CISC), which is part of the Canada's National Police Services (NPS), which is administered by the RCMP but supports policing, writ large, in Canada. In that role with CISNB I represented New Brunswick as a member of the Canadian Integrated Response to Organized Crime, which was responsible for coordinating operations across the country by all agencies in the effort to disrupt and dismantle organized crime.

From a governance perspective, I reported to a committee of municipal Council on matters of oversight and accountability, as well as on strategic reform and budgetary issues.

My training and experience as an auditor within the municipality's corporate quality assurance structure also provides a valuable frame of reference in examining service-delivery structures.

I have used my professional knowledge and experience to distill the information provided by various agencies in this report in order to assist the public in understanding the structure of policing in Nova Scotia.

## Mandate

This report addresses the relatively narrow issue of the structure of policing in Nova Scotia. The statement of work approved for this report sets out the follow mandate:

*Core policing functions in Canada generally fall within the jurisdiction of the Provinces, while at the same time responsibility for certain aspects of policing rest with the federal government. The decisions about the provision of policing services in communities throughout Canada are made by those communities. Understanding the co-mingling of responsibilities for policing, and how those responsibilities are executed, is essential in producing a clear picture of the policing network in any jurisdiction. This report will focus on the structure, the policies, and the procedures for policing operations in Nova Scotia in April 2020. It will provide a snapshot of how policing was structured, resourced, and designed to function at that time.<sup>1</sup>*

This report is intended to provide the reader, regardless of their level of familiarity with policing, the justice system, or government processes in general, with an understanding of how policing was designed to function in Nova Scotia at or about the time of the April 2020 mass casualty incident. It will not, however, provide any evaluation or analysis of how policing services were being provided at that time. It should be seen, as the above excerpt notes, as a snapshot of how the system of policing was designed to function at the time; essentially a baseline against which the reader can compare and evaluate other information.

The report will not include any analysis that compares or contrasts any aspect of policing services or police support services, such as, but not restricted to: police training, police deployment strategies, Crime Severity Index<sup>2</sup>, weighted clearance rate<sup>3</sup>, or cost of policing.

<sup>1</sup> Statement of Work, Barry MacKnight. Mass Casualty Commission.

<sup>2</sup> Crime severity index takes into account both the volume and the seriousness of crime. The index is calculated with weight assigned to each offence that are derived from average sentences handed down by criminal courts. The more serious the average sentence, the higher the weight for that offence. As a result, more serious offences have greater impact on changes in the index. All criminal code offences are included in this index. Statistics Canada. 2019. [Crime Severity Index of Crime](https://www23.statcan.gc.ca/imdb/p3Var.pl?Function=DEC&Id=252233). <https://www23.statcan.gc.ca/imdb/p3Var.pl?Function=DEC&Id=252233>. Online September 4, 2021.

<sup>3</sup> The weighted clearance rate is based on the same principles as the Police Reported Crime Severity Index (CSI), whereby more serious offences are assigned a higher "weight" than less serious offences. Statistics Canada. 2021. Crime severity index and weighted clearance rates, Canada, provinces, territories and Census Metropolitan Areas. <https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=3510002601&pickMembers%5B0%5D=1.6&cubeTimeFrame.startYear=2016&cubeTimeFrame.endYear=2020&referencePeriods=20160101%2C20200101>. Online September 4, 2021.

### Methodology

The eleven police agencies that provide frontline policing services<sup>4</sup> to the citizens of Nova Scotia were contacted and provided information for this report. While the information requested was the same in each case, the nature of the responses varied based on the size and complexity of the agency, as well as the judgement of those providing the response.

The initial request to each of the municipal police agencies was for the following information:

- *the geographical area of responsibility.*
- *any formal mutual aid agreements or any services contracted to or from other police agencies.*
- *the approved complement of police officers (including numbers by rank), auxiliary officers, special constables, by-law enforcement officers, and civilian employees.*
- *the structure of the department, including any and all specialized units/sections such as Street Crime, Forensic Identification, Major Crime, etc., including the complement for each team/section/unit and operational mandates.*
- *other operational support teams including their approved complement and operational mandates.*
- *any integrated policing units comprised of police officers and/or civilians from different police agencies (RCMP/Municipal or Municipal/Municipal), including their geographic areas of operation, their operational mandate, and their approved complement.*
- *interagency mutual aid practices (backup), procedures, and policies for day-to-day policing operations.*
- *any regular training, mandatory training, or educational requirements/opportunities, and who provides the training.*
- *a copy of the most recent strategic plan.*
- *with respect to each of the above, please include a copy of any policy, procedure, or standing order that may apply.*

Given the complexity of the RCMP's operations in Nova Scotia- serving both as the provincial police force providing local police service to a number of communities, along with fulfilling its federal policing responsibilities- the request for information was refined after discussions with the RCMP. The following categories of disclosure proposed by the RCMP and accepted by the author (acronym definitions added):

- *Nova Scotia's current socio-political, demographics, population profile.*
- *RCMP Policing priorities and challenges*

---

<sup>4</sup> This excludes the CAF Military Police, CN Police Service (Canadian National Railway), and CP Police Service (Canadian Pacific Railway).

- *(Governance) Policy and procedures.*
- *(Governance) NS Policing standards and NS Police Act.*
- *(Governance) SIRT (Serious Incident Response Team).*
- *(Governance) RCMP Act—PRU.(Professional Responsibility Unit)*
- *(Governance) Training and training standards (mandatory training and otherwise. Also covered in CIC and ERT— include IARD (Immediate Action Rapid Deployment), equipment i.e. carbines, HBA (hard body armour).*
- *Governance CRCC (Civilian Review and Complaints Commission).*
- *Communications –NS Chiefs, Other policing committees.*
- *Crime Analysts*
- *CISNS (Criminal Intelligence Service Nova Scotia)*
- *Public Alerting*
- *Canadian Firearms Program*

The Government of Nova Scotia also provides support related to the delivery of policing services in the province and therefore provided information for this report.

Legal counsel for the Commission made initial contact with each of the police agencies and contributors. The author made follow-up contacts with the police agencies to clarify the nature of the information requested. Any information provided to the author that was deemed not relevant to this report but possibly relevant to the larger objectives of the Commission, was forwarded to the Commission. Information was also gleaned from the public domain as many of the agencies involved in this report provide information to the public about their operations.

A draft report was circulated to all of the contributing agencies, requesting that they review the report for correctness and accuracy especially as it related to the information they had submitted. The RCMP requested a meeting to outline their feedback. That meeting was attended by the Commanding Officer, Criminal Operations Officer, Officers in Charge of Issues Management (both current and former), Officer in Charge Support Services, Officer in Charge Federal Policing, District Policing Officer Southwest Nova, District Policing Officer Northeast Nova, Officer in Charge Administration and Personnel, Executive Officer to the Commanding Officer, and the Acting Manager of Strategic Planning and Client Services. The RCMP also submitted feedback through documents by email.

Feedback on the draft report was also submitted by Public Safety Canada, Nova Scotia Department of Justice, Halifax Regional Police, and Annapolis Royal Police Service.

### Limitations

It is understood and acknowledged by the author that the availability of personnel to be deployed by any police agency referred to in this report is dynamic. Where staff numbers were available, they are provided in this report; it is not, however, the intention of this report to provide a precise accounting of the number of police officers or civilian employees working on any given day in any jurisdiction in the province, but rather to depict, at a high level, the scale of policing operations throughout the province.

It is also not within the mandate of this report to provide an exhaustive accounting of each and every operational, support, or administrative team of any police agency referred to in the report. It is however acknowledged and understood that the overall functioning of any police agency relies on the collective contribution of all employees, and that every budgeted position contributes to the mission of the agency.

There is an indication from information received from some agencies that measures were in place at times in 2020, as result of and in response to the COVID-19 pandemic, that altered the deployment of officers in order to reduce the risk of exposure to illness and medical isolation.

The police agencies engaged in the research for this report provided varying levels of detail regarding staff numbers and deployment strategies. Where numbers were provided, the source of those numbers will be cited. The responsibility, nevertheless, for any errors or omissions between the information provided by the agencies and what was reported herein lies with the author. It should also be noted that information was provided in some cases by agencies that was considered outside of the mandate of this report, and therefore was not included in the report.

### Notes on Form, Presentation, and Terms

This report includes several excerpts from documents that describe services related to policing in Nova Scotia. They are highlighted in blue so that it is clear to the reader that the text is taken from a source document. Other, shorter, quotations are designated with quotation marks or indenting.

Agency employees are described in this report as police officers or civilians. It is understood that there are different classifications of employees within these groups related to their bargaining units or status as management or non-management; their specialized training, and also the rank structure. The classification of employees in this report as civilian or police officer is done with respect and for the sake of simplifying an inherently complex system.

The rank structure of police agencies most often includes the rank of Constable; the ranks of Corporal, Sergeant, and Staff-Sergeant are non-commissioned officers (NCOs); the ranks of Inspector, Superintendent, Chief Superintendent, Assistant Commissioner, Deputy Commissioner, Commissioner, Deputy Chief of Police, and Chief of Police are commissioned officers and/or management positions. When the term officer is used in this report it refers to any police officer regardless of rank unless the context indicates otherwise.

## Introduction

For many Canadians, policing is a public service that is quite remote from their everyday lives. Beyond seeing a police patrol car in their neighbourhood from time to time, they are not often in contact with the police. It is primarily through the news media that people learn about the activities of their local police, and through the entertainment media that they see fictionalized representations of police officers in the course of their duties. Most of these programs are based on American police agencies, and American models of policing, and are often depicting events far removed from the daily experiences of ordinary Canadian police officers.

As an institution, policing is commonly seen as but one part of the larger criminal justice system, which is, in a broad sense, comprised of the police, the courts, and corrections. Simply put, the police are tasked with preventing crime, enforcing the law, assisting victims of crime, providing emergency and enhanced services, and maintaining public order.<sup>5</sup> The wide variety of activities in which the police find themselves engaged will be explored in this report in order to provide an overview of the scope of police responsibility, and the organizational structures that support those activities.

This report will provide the reader with an overview of the actual structure of policing as it existed in Nova Scotia in 2020 at or about the time of the tragic events of 18-19 April. Serving as a guide to help the reader understand how different types of policing agencies serve their communities, this report will touch on issues as varied as: where the legal authority to create a police agency is derived, to how police officers from different agencies work together to serve their communities. Given the complexity of the policing system, this report will provide a high-level perspective.

---

<sup>5</sup> *Police Act*, S.N.S. 2004, c. 31 [*Police Act*] ss. 31(1) and 35(3).

### Basic Structure of Policing in Canada

In Canada there are five levels of policing that are engaged directly or indirectly in providing frontline policing services.

- Federal/National Police Service
  - The RCMP is the federal police service of Canada. As such, it serves a federal policing role across Canada, including in Nova Scotia.
  
- Provincial Police Service
  - Provinces may choose the RCMP as their provincial police service, or they may form their own provincial police service, as is the case in Ontario and Quebec.
    - Nova Scotia has contracted with the RCMP to supply provincial police services.
    - The Royal Newfoundland Constabulary serves as the provincial police service in Newfoundland and Labrador but shares those duties with the RCMP.
  
- Municipal Police Service
  - Municipalities may choose to form their own police service or to contract with another agency, including the RCMP.
  
- Regional Police Service
  - A group of municipalities may choose to use the same municipal police agency.
  
- First Nations Policing
  - A First Nations or Inuit community may have its own police service under a self-administered agreement. The community may also enter into a tripartite agreement with the RCMP or a quadripartite agreement to use another community's police service.

The National Police Services (NPS) is a key foundational structure that supports policing in Canada. While the NPS is administered by the RCMP, it is a suite of programs that supports all policing in Canada. The NPS will be described in more detail later in this report.

The RCMP provides police services at the federal, provincial, and municipal levels in the Province of Nova Scotia. However, several municipalities in Nova Scotia maintain their own police services; in addition to the RCMP, there is a total of ten municipal police services providing frontline policing in Nova Scotia.

### Legal Context for Policing

Nova Scotia's *Police Act* sets out how, and by whom, communities will be policed. Section 5(1) states that:

...the Minister must ensure that there is adequate and effective policing.

This section of the *Police Act* places the responsibility on the provincial government to ensure that police agencies are meeting the obligations set out in the *Act*.

Every municipality is responsible for providing and paying for its own policing. Section 36(1) sets out that the community can do this by:

- Establishing a municipal police department.
- Entering into an agreement to provide police services with:
  - the RCMP as the provincial police under the PPSA,
  - the federal government,
  - another municipality,
- by any other means approved by the Minister.

A municipality that establishes a municipal police department must provide for a board of police commissioners, the majority of whom are not members of the municipal council, or employees of the municipality.<sup>6</sup>

The role of the board is to provide civilian governance in relation to

- the enforcement of law
- the maintenance of law and order
- the prevention of crime, and
- to provide administrative direction, organization and policy required to maintain an adequate, effective and efficient police department.<sup>7</sup>

The board explicitly cannot provide direction in relation to

- complaints, discipline, or personnel conduct except in respect of the Chief of Police
- a specific prosecution or investigation
- the actual day to day direction of the police department.

---

<sup>6</sup> Ibid. S 44(1).

<sup>7</sup> Ibid. S. 55.

Only the board chair may provide advice or direction to the Chief of Police, and not to any other member of the police department. No other member of the board may give advice or direction to a member of the police department.

A municipality that is policed by the RCMP must establish a police advisory board instead of a board of police commissioners<sup>8</sup>. The advisory board consists of a mix of members of the municipal council, other residents of the community, and a person appointed by the Minister.

The *Police Act* provides that police agencies in Nova Scotia, including the provincial police, must provide the following services:

- crime prevention,
- law enforcement,
- assistance to victims of crime,
- emergency and enhanced services, and
- public order maintenance.<sup>9</sup>

The *Act* creates the positions of:

- the Nova Scotia Police Complaints Commissioner<sup>10</sup>
- the Nova Scotia Police Review Board<sup>11</sup>, and
- the Serious Incident Response Team<sup>12</sup>

Each of these positions will be discussed later in this report under Governance and Accountability.

The *Police Act* also provides for the establishment of the Nova Scotia Provincial Police and indicates that the province may enter into an agreement with the federal government for the RCMP to serve in that role<sup>13</sup>, as is the case now in Nova Scotia. *The Provincial Police Service Agreement (PPSA)* is the contract that sets out the conditions for how the RCMP will provide policing services to communities in Nova Scotia. We will look closer at this agreement in the next section.

While police officers are appointed under the *Police Act* pursuant to the authority granted to a municipal board of police commissioners to do so, their authority to carry out their duties extends throughout the province.<sup>14</sup> This is significant because it speaks to the connection

<sup>8</sup> Ibid. S. 57.

<sup>9</sup> Ibid. S. 35(3).

<sup>10</sup> Ibid. S. 11.

<sup>11</sup> Ibid. S. 13.

<sup>12</sup> Ibid. S. 26A.

<sup>13</sup> Ibid. S. 27, 34.

<sup>14</sup> Ibid. S 42(2).

between local crime and a regional response to that crime. This report will describe a number of integrated policing structures comprised of police officers employed by different police agencies whose mandate has them addressing regional and provincial enforcement priorities that, while being directly connected to local criminal outcomes, see those police officers working at times outside of their primary jurisdiction.

### Provincial Police Service Agreement (PPSA)

As the formalized agreement between the federal government and the Province of Nova Scotia, the PPSA<sup>15</sup> sets out in detail the terms for the provision of policing services by the RCMP in their contracted role as the provincial police service in Nova Scotia. The *Police Act* provides several options for communities in determining how they wish to provide policing services. They can:

- form their own municipal police department,
- enter into an agreement with another municipality to use that municipality's police department, or
- enter into an agreement to have the RCMP police the community.

In the case of the RCMP option, there are three types of agreements through which communities can access policing services:

1. Communities with a population of fewer than 5000 people can be policed under the Provincial Police Service Agreement (PPSA), with a 70%-30% cost-share between the province and the federal government. The province then recovers costs of the police service from the community.
2. Communities with a population of 5,000 to 14,999 may enter into a direct contract with Canada for policing by the RCMP, known as a Municipal Police Service Agreement (MPSA)<sup>16</sup>. Under this type of contract, the community pays 70% of the cost and Canada pays 30%. But new communities entering into an MPSA for the first time during the term of the current PPSA must cover 100% of RCMP policing costs. For these communities with populations between 5,000 and 14,999 the Minister may also direct that they continue to be policed under the PPSA with the same 70%-30% cost-share formula.
3. Communities with a population greater than 14,999 may enter into a direct contract with Canada for policing by the RCMP; this is also a Municipal Police Service Agreement (MPSA). Under this type of contract, the community pays 90% of the cost and Canada pays 10%; but

<sup>15</sup> Nova Scotia, Canada. [Provincial Police Service Agreement, April 1, 2012](#). Author. (GOC00000051\_0001)

<sup>16</sup> There are communities whose populations have decreased below 5000 and their MPSA has been permitted to be retained. RCMP. 2018. [RCMP Policing Agreements in Nova Scotia, Strategic Planning and Client Services](#). Author. (GOC00033767\_0001).

new communities entering into an MPSA during the term of the current PPSA must cover 100% of the policing costs.

4. Indigenous communities in Nova Scotia can enter into a tripartite agreement with the federal government and the province, with a 52-48% cost share, respectively.<sup>17</sup>

### PPSA Overview

The provisions of the PPSA have wide ranging impacts across Nova Scotia due to the number of communities that are policed by the RCMP under the agreement. With roughly half of the population of Nova Scotia living in communities policed by the RCMP, an overview of the PPSA is necessary to outline key information about how the agreement is implemented. The following section provides a short description of the content from several of the PPSA articles, while a more extensive overview can be found in Appendix A.

The overview of the PPSA in Appendix A is taken directly from the **2012 RCMP Provincial and Territorial Police Service Agreements Companion Document, 2014**, as prepared by the Contract Management Committee (CMC)<sup>18</sup>. The CMC's role, structure, and mandate are outlined in Article 21 of the PPSA. The committee is comprised of the Federal/Provincial/Territorial (FPT) Assistant Deputy Ministers of policing and/or public safety from the provinces and territories with which Canada has a Police Service Agreement, along with a representative from Public Safety Canada and the RCMP.<sup>19</sup> It is important to point out that the Companion Document,

...provides information to facilitate, where appropriate, the consistent interpretation and uniform application of the Agreements in contract policing jurisdictions. When applicable, it also explains the variations that are unique to specific jurisdictions' Agreements. The Companion Document does not form part of the Agreements (as per Article 21) and it is not a legally binding document.<sup>20</sup>

### PPSA Articles

**Article 2: Purpose and Scope:** setting out the fundamental roles and responsibilities of the parties, this article also touches on the Minister's authority to direct the RCMP to provide assistance or special expertise to other police agencies.

<sup>17</sup> Indigenous communities may also enter into a quadripartite agreement if they choose a non-RCMP police agency.

<sup>18</sup> Contract Management Committee. 2012 RCMP Provincial and Territorial Police Service Agreements Companion Document, 2014. Version 1.1, September 2017. Author. See Annex B.

<sup>19</sup> Ibid.

<sup>20</sup> Ibid. Page 7.

**Article 3: Term of Agreement:** this article sets out the term of the agreement and the process for extension and renewal, termination, and transition out of the agreement.

**Article 4: Inclusions and Exclusions:** the article addresses the geographical areas of responsibility for policing service in the province.

**Article 5: Increase or Reduction in the Provincial Police Service & Regional or Divisional Administration Staff:** the process for changing the number of police officers working in the province is set out in this article, including the consultation process.

**Article 6: Management of the Provincial or Territorial Police Service:** this article addresses the responsibilities of the parties to the agreement in managing the RCMP. The issue of policing standards and procedures is also covered.

**Article 7: The Commanding Officer (CO) and the Operation of the Division:** this article sets the authority and parameters for the Minister to provide direction to the CO, as well as establishing objectives, priorities, and goals for the RCMP.

**Article 8: Resources and Organization:** this article addresses the process through which changes to the RCMP (location of detachments and units) in the province are made, as well as reporting to the Minister on the organizational structure of the RCMP.

**Article 9: Emergencies and Events:** this article sets out the process for accessing additional resources during emergencies and other events, including the cost implications.

**Article 10: Municipalities:** the terms for municipalities policed by the RCMP are addressed in this article, including issues such as population and cost-share.

**Article 11: Basis of Calculation of Payment:** this article addresses the methodology for determining costs and where the responsibility for payment lies.

**Article 12: Accommodations Program- AB, NS, SK Version:** this article addresses issues related to the sharing of costs of federally owned accommodations.

**Article 13: Removal of Buildings and Living Quarters and Transfer of Buildings, Living Quarters and Land:** this article deals with the process for assessing the fair market value of federally owned buildings.

**Article 15: Transfer of Ownership of Equipment:** in the case of the expiration or termination of the PPSA, this article sets out the process for managing the transfer of equipment purchased by the federal government.

**Article 16: Jails and Lock-ups:** addressing the responsibility for holding persons lawfully detained by the police, this article also touches on the process for changing the number of lock-up facilities.

**Article 18: Financial Planning and Reporting:** the process for the parties to engage in long-term financial planning is set out in this article.

**Article 19: Directed Reviews:** the province may request reviews of programs and services.

**Article 20: Bilateral Reviews:** a review mechanism to examine emerging issues.

**Article 21: Contract Management Committee:** this articles establishes the terms by which the committee fulfills its governance role in relation to the PPSA.

**Article 22: CMC Five Year Reviews:** a mechanism to review the financial and other provisions of the agreement.

**Appendix A: Application of the Municipal Police Service Agreement (MPSA):** this appendix addressed the MPSA as it mirrors the terms of the operating procedures of the PPSA.

**Appendix B: Contract Management Committee Terms of Reference (CMC):** addressing the authority, mandate, and membership of the CMC.

## Police Resources

### How many police officers?

The evolving needs and expectations of communities regarding crime and public safety, balanced against rising cost of policing<sup>21</sup> and the financial capacity of the community, can result in police agencies having to address incremental changes in resource levels. Policing reviews in communities policed by the RCMP under the PPSA can be requested by a community to the Minister of Justice. A policing review is a joint process between the RCMP and the NS Department of Justice staff. Any police agency may identify a need for incremental increases or reallocations of staff in order to fill a gap in service. Such incremental changes in staffing levels, in particular when increased funding is required, must be taken through the agency's budget process. Generally, this would involve the submission of standardized documentation, sometimes referred to as a business case, that establishes the rationale, options, and financial implications. The RCMP's Multi-Year Financial Plans include business cases for incremental increases in staff for the next three fiscal years.<sup>22</sup>

<sup>21</sup> Statistics Canada. (2020). Police Resources in Canada, 2019. <https://www150.statcan.gc.ca/n1/pub/85-002-x/2020001/article/00015-eng.htm>. Online August 12, 2021.

<sup>22</sup> RCMP. (2020). *H Division Multi-Year Financial Plan 2019/20 to 2021/22*. Author. (GOC00000049\_0001).

The methodology used by the RCMP to estimate the number of officers required to staff a detachment involves several steps and the use of resourcing model.

NOTE: Information regarding the practice of establishing police resource levels was not sought from the contributing agencies in the first instance, but was offered by the RCMP in the discussions that led to the agreed upon outline for disclosure from the RCMP.<sup>23</sup>

#### A Resourcing Model- GDPRM

The RCMP uses a resourcing model to estimate the proper staffing level for detachments across Canada. The General Duty Police Resourcing Model (GDPRM) was endorsed by the RCMP in 2007, after about ten years of research and development.<sup>24</sup> Using detachment specific data, the GDPRM estimates the number of police officers required and how they should be allocated.

The following workload parameters are considered in the model<sup>25</sup>:

- Distribution of occurrences and call priority at the Detachment, based on Detachment specific police records management systems (RMS) historical data;
- Profile of time standards (as outlined below) required for a General Duty uniform first responder to respond to an occurrence in terms of Initial Investigation, Follow-up, Court and Disposition activities;
- Distribution of travel time taken to arrive at scene based on Detachment specific historical CAD data;
- Detachment specific shift schedules;
- Detachment specific hours of officer availability considering detractors (as outlined below) such as training and leave;
- Officer back-up and assistance;
- Call-out rules (specifically for non-24-hour Detachments when a priority call is received after scheduled hours);
- Core service time (0800hrs to 2200hrs) and non-core service time; and
- Administrative time.

#### Percentage of Calls Responded to Immediately:

- The GDPRM calculates the percentage of availability for General Duty uniform first responders to immediately respond to calls for service over the course of the reviewed period. For example, the ability to respond to 95% of the calls for service means that 5% of the time, when a priority call comes in, all General Duty uniform first responders are

<sup>23</sup> See page 7 of this report.

<sup>24</sup> RCMP. (2021). General Duty Police Resourcing Model (GDPRM) Background. Author. (GOC00046070\_0001).

<sup>25</sup> RCMP. (2021). General Duty Police Resourcing Model (GDPRM) General Overview. Author. (GOC00046071\_0001).

engaged and the call has to be queued. As a result, personnel must be redeployed from a lower priority call or personnel must be recalled for duty.

- Level of availability, particularly for Priority 1 and Priority 2 calls, is a good indicator of workload for a Detachment/Unit.

#### Time Standards:

- Time standards for investigations are included in the GDPRM and grouped into 4 categories: Initial Investigation, Follow-Up, Court and Disposition. Lower, most frequent and upper limits are considered for each time standard group, as well as the likelihood of back-up and assistance.
- These time standards were developed by a rotation of Regular Members from across the country through workshops and focus groups coordinated by the Police Resourcing Model Support Unit (PRMSU). They are also updated as required by PRMSU if new legislation or policy impacts the workload of General Duty first responders.

#### Proactive Time:

- Proactive time corresponds to the amount of time between 0800hrs and 2200hrs which is not committed to Response to Call, Initial Investigation, Follow-Up, Court, Case Disposition and Administrative Duties.
- Standards and expectations for proactive time duties may vary from community to community. It is generally accepted that as levels for proactive time drop, policing becomes reactive in nature with little or no time remaining for a proactive approach to policing and/or community policing based activities.
- Prolonged periods of call-to-call response is an indicator of heavy workload and demonstrate that the General Duty uniform first responder resources are more reactive in nature and less proactive.
- Proactive time is measured in minutes between work activities; it does not necessarily represent consecutive minutes.
- Options are available within the GDPRM for a variety of resourcing scenario analyses. For example: increasing the proactive time to reduce workload by either increasing the availability of officers to respond to calls for service through increases in establishment or by reducing the calls for service which officers respond to by making shift scheduling adjustments. Scheduled and/or planned overtime, particularly during peak seasons, may be another analysis option for consideration within the model.
- PRMSU (Police Resourcing Model Support Unit) recommends a minimum benchmark of 35% proactive time based on recent research of Canadian police services.

#### Detractors:

MCC

Structure of Policing in Nova Scotia

MacKnight

- Detractors are a calculation of time where General Duty uniform first responders are away from their regular work duties. Detractors are calculated in hours per year.
- Detractors are circumstances where a General Duty uniform first responder is not available for response to call such as, but not limited to: annual leave, statutory holidays, training, sick leave, paternity/maternity leave, court related duties, specialized duties and transfers. These factors are considered and calculated in the GDPRM resourcing analysis.
- The detractor hours are removed from the total regular working hours to provide a more accurate availability of actual General Duty uniform first response resources.
- The GDPRM uses this detractor calculation to determine the number of General Duty uniform first responders required to provide a level of service.

#### Travel Time:

- The GDPRM uses travel time distributions based on historical CAD (dispatch) data during its simulations.
- Only uninterrupted travel times are used for these calculations in order to provide the most accurate travel times.

The GDPRM is not an Audit or Review Function. The GDPRM is not a Staffing Function, it is a tool to estimate General Duty first responder resource requirements rather than an RCMP standard.

The RCMP disclosed to the Commission numerous documents related to policing reviews that had been conducted in Nova Scotia over a number of years in response to requests from municipalities. The reviews examined for this report<sup>26</sup> include analysis of the communities' policing needs and expectations, results of workload analyses of the relevant areas, as well as simulations based on different staffing levels and schedules. An analysis of costs compared to workload and calls for service can also be included in such a review. The reviews provided options to the municipalities regarding how they can achieve their objectives based on projected costs.

#### Rural and Urban Policing

Many Nova Scotians live in communities where a small-town policing model is the norm, whether policing services are supplied by the RCMP through the Provincial Police Service Agreement, through the RCMP under a Municipal Police Service Agreement, or by a municipal police agency. While these agencies, be they municipal or RCMP, may have access to specialty services from neighbouring agencies or centralized resources, the day-to-day policing is done by

<sup>26</sup> RCMP. 2020. General Duty Police Resourcing Model Review Cumberland District 2019-01-01 to 2019-12-31.

Author. (GOC00033649\_0001).

RCMP. 2020. Review of Policing Colchester District RCMP Possibilities for change. Author. (GOC00045898\_0001).

a small team of officers. In many instances these small teams work shifts designed to cover periods of peak demand. However, there are times when there may be no officers on duty in a particular agency or detachment. In such cases the police revert to an alternate response model. This may involve a combination of response from neighbouring jurisdictions, or elsewhere in the case of an RCMP district, and/or officers being on-call while off-duty.<sup>27 28</sup>

Low population density in rural areas also means that policing services may need to be provided in locations that are some distance from where the police are situated. For example, a police officer based in any community may be dealing with a call for service at one end of the jurisdiction when another priority call for service is made from the opposite end of the jurisdiction. Travel time is a key feature factored into response times as indicated in the RCMP's GDPRM described in the previous section.

While many police services can be delivered by phone or online, the investigation of certain crimes requires that the police go to the location where the incident occurred. In 2016 the RCMP created the Call Back Unit (CBU)<sup>29</sup> to alleviate pressure on frontline members. The five officers assigned to the CBU process calls that do not require a police officer to physically meet with the complainant, such as: lost items, telemarketing complaints, and Facebook related complaints.<sup>30</sup>

Responding to emergency calls for service and serious crimes in progress requires a timely response from the police. This can present challenges in any rural policing environment where large distances must be traveled to reach a location, and/or when there is a surge in high priority calls for service.

Amelia Thatcher's 2017 article from the RCMP's Gazette magazine, touched on the challenges of rural policing.

The Digby RCMP detachment polices approximately 20 communities in Digby County. This rural area of about 18,000 residents is a microcosm of Canada's diversity: there's a Mi'kmaq First Nations community called Bear River, two islands with isolated fishing villages, and three African Nova-Scotian communities with historic roots dating back to the 18th century.

In many ways, the unique populations and expansive geographies are the biggest challenges faced by rural detachments like Digby. The remoteness of some areas

<sup>27</sup> M. Kane, Chief of Police, Annapolis Royal Police Service. Telephone conversation of 21 July 21.

<sup>28</sup> J. Spence, Sgt, RCMP. Email of 22 July 21.

<sup>29</sup> RCMP. 2019. Colchester District RCMP: Vacancy and Shift Coverage Data. Author. (GOC00045916).

<sup>30</sup> Ibid.

can make it difficult for RCMP officers to respond to calls, based on the sheer distance they have to travel.

"If something happens in the city, the cavalry shows up. In the rural areas, the closest officer for backup could be 40 kilometres away," says Supt. Martin Marin, the district policing officer for southwest Nova Scotia. "You really have to know who your partners are and use all resources."<sup>31</sup>

In higher density urban environments there may be other challenges taxing police resources, but travel time and distance for frontline officers, or access to additional officers for backup are rarely among those challenges.

#### Multi-Officer Response to High-Risk Incidents

The availability of additional police officers to support a multi-officer response to high-risk calls for service varies by jurisdiction. Regardless of the size of the agency, there appears to be common practices in place to ensure that backup is available when required. Municipal agencies appear to not have specific policies regarding mutual aid or backup assistance to other agencies, but many indicated that they do provide mutual aid as and when asked to do so for both emergency and non-emergency operational issues.<sup>32</sup>

The RCMP have a policy outlining procedures for accessing assistance, which covers their own members and other agencies. The following excerpts<sup>33</sup> provide an overview of key aspects of the policy:

*Back-up refers to an urgent response by on-duty or off-duty RCMP members and/or operational peace/police officers from other accredited law enforcement agencies. Back-up may be required in support of members of the RCMP before, during or after an incident.*

This section of the policy sets out that a request for backup received by the RCMP from any member of any police agency must be addressed without delay.

*Back-up will be required when responding to high-risk incidents involving, but not limited to, domestic disputes, the potential for violence, armed suspects, emotionally disturbed individuals, or suspects fleeing the scene of a crime.*

<sup>31</sup> A. Thatcher. (2017). *Urban vs Rural, Policing Nova Scotia's unique communities and geographies*. Gazette Magazine, Vol. 79, No. 4. <https://www.rcmp-grc.gc.ca/en/gazette/urban-vs-rural>. Online August 12, 2021.

<sup>32</sup> Submissions from Amherst PD, Annapolis Royal PS, Westville PS, Cape Breton RP, Stellarton, Truro PS, Kentville PS, Bridgewater PS, New Glasgow RP.

<sup>33</sup> RCMP. H Division Operational Manual, 16.9 Request for Back-Up. Author. (GOC0000060\_0001)

*Every member will render assistance to a request for back-up without unreasonable delay. An off-duty member who volunteers to be and is identified as back-up must ensure that he or she remains available to provide timely assistance upon request.*

The policy also indicates that regardless of the availability of assistance, the officers must take action to ensure public safety and police safety.

*Where a member has determined that back-up is required, but may be delayed due to the response time, the member will continuously assess risk, applying necessary intervention to ensure public and police safety in accordance with the principles of the IMIM (Incident Management Intervention Model<sup>34</sup>). Where practicable, the member will provide continuous updates to OCC and other responding members. If there is an obvious or perceived danger requiring immediate intervention, the member must take appropriate action to prevent grievous bodily harm or death to himself/herself or another person.*

The call-out practice with the RCMP Operational Communications Centre (OCC) for when officers are not on duty also accounts for decisions related to multi-officer response.

*When a primary member is called out, the OCC dispatcher will ask if they would like their back up called to assist. If additional resources (more than the two on call members) are required, or if a supervisor must be contacted, that request will come through the Risk Manager or on call members.*

*These are the points generally considered when calling out members and back up members:*

*Type of complaint:*

- *Domestic*
- *Violence / possibility of violence*
- *Number of subjects*
- *Weapons*
- *IPTA / MHA issues (Involuntary Psychiatric Treatment Act/Mental Health Act)*
- *Other challenges such as weather, road conditions, accessibility to location*
- *On call member experience/skillset*
- *lack of information/unknowns about complaint*
- *Risk assessment either by on call member, Risk Manager or dispatcher*

<sup>34</sup> RCMP. Incident Management/Intervention Model, 2021-05-05. <https://www.rcmp-grc.gc.ca/en/incident-management-intervention-model-imim>. Online July 23, 2021. See Appendix A.

MCC

Structure of Policing in Nova Scotia

MacKnight

- *Does the occurrence require an urgent response - is it something that can be dealt with by the Risk Manager on the telephone or by members when they come on duty (Admin non urgent file)*

*In the event of a significant occurrence requiring additional resources than are working in a district, the following would be the process:*

- *Identify type of event and number and type of resources required*
- *Identify the most efficient method of obtaining resources (calling out additional off duty local members and / or moving resources from neighbouring districts / proximity to municipal police agencies.)*
- *If resources are to be moved, contact the Team Leader or A/TL in the neighbouring district to determine the number of members available and equipment required (C8, 40 mm , CEW, Spike Belt, NVG). If contacting a municipal PD point of contact would generally be the Sgt on duty. When requesting assistance from HRM RCMP either the RM calls the RCMP watch commander directly, or the request goes from the OCC to IES.*
- *If no supervisor is on duty, the risk manager will assume the role and directly move members from their district.*
- *All movement of resources is done with a risk assessment and planning to ensure adequate coverage at the districts providing personnel.*
- *Ongoing assessment is conducted to adjust resources as necessary. As these situations are dynamic, resources numbers are often adjusted as the situation evolves or is resolved.*
- *If a senior NCO (District Commander or Ops NCO) takes control of the incident on scene, the resourcing requests would then come through them, and be facilitated by the Risk Manager / OCC.<sup>35</sup>*

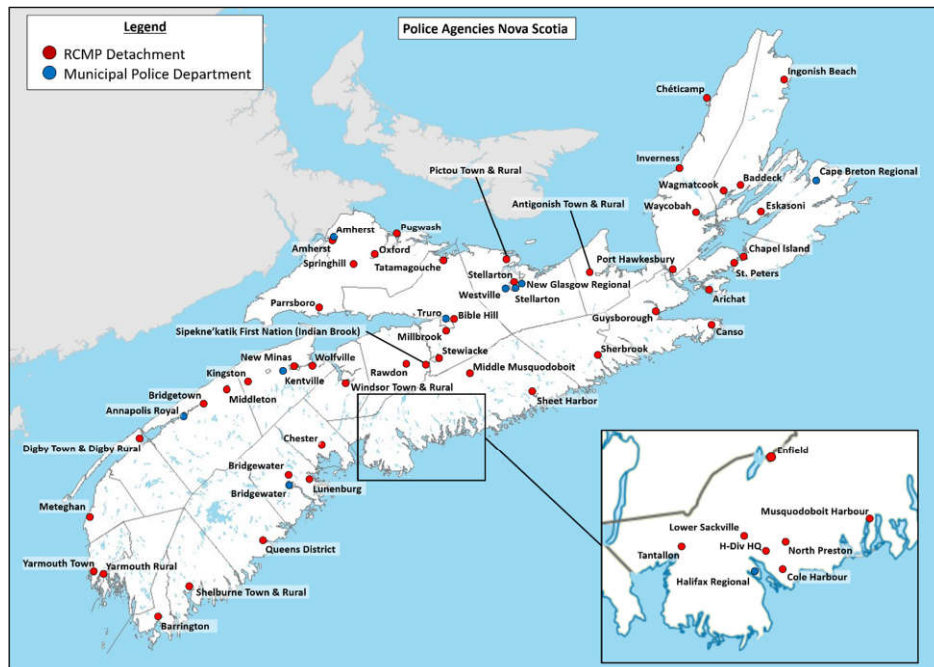

The RCMP national Operational Manual policy<sup>36</sup> on the issue of backup and multiple officer response to incidents requires that there be a risk assessment completed as outlined in the *Backup- Unit Plan*. The completion of this plan is primarily for first responder units.

The backup plan provides for a risk assessment of constant and variable situational factors specific to the detachment or unit, along with a Risk Identification Worksheet and a Risk Response/Backup Plan Summary for Elevated Risks. The plan also requires the approval of several supervisory levels beginning with the Detachment Commander, up to and including the Commanding Officer.

<sup>35</sup> J. Spence, Sgt. RCMP. Email of 4 Aug 21.

<sup>36</sup> RCMP. Operational Manual- ch. 16.9 Backup. Author. (GOC0000029\_0001). See Appendix A for policy and Unit Backup Plan template.

## Nova Scotia Policing

There are eleven police agencies operating in Nova Scotia and for this report they have been divided into four categories based on their approved complement of police officers and civilian employees. It is important to point out that the contribution of civilian employees ought not be underestimated. Increasingly, police agencies are examining how roles currently filled by police officers could more effectively and efficiently be staffed by civilian employees with the appropriate education and training.

### Agencies by Size (including civilian employees<sup>37</sup>)

Police agencies in Nova Scotia can be sorted by size from the RCMP with 1,427 employees in descending order down to the Annapolis Police Service with four (4) employees. It is not the intention in this section to provide a precise accounting of staff numbers for each agency or detachment on any given date, but rather to give the reader a sense of the number of employees assigned to the agency or detachment. The numbers include police officers and civilian employees, but do not reflect vacancies or positions that may be surplus to the authorized or established positions.

1. RCMP (1,427)<sup>38</sup>
  - a. Provincial Contract- Provincial Policing Service Agreement (1,003)
  - b. Federal Policing (158)
  - c. Municipal Contract- Municipal Police Service Agreement (45)
  - d. First Nations- Community Tripartite Agreement (47)
  - e. Administration (Divisional, Departmental, and Regional) (174)
2. Large municipal agencies (more than 100 employees)
  - a. Halifax Regional Police (741)<sup>39</sup>
  - b. Cape Breton Regional Police Service (230)<sup>40</sup>
3. Medium municipal agencies (more than 24 employees)
  - a. Truro Police Service (51)<sup>41</sup>
  - b. New Glasgow Regional Police Service (42)<sup>42</sup>
  - c. Bridgewater Police Service (37)<sup>43</sup>
  - d. Amherst Police Department (30)<sup>44</sup>
4. Small municipal agencies (fewer than 25 employees)
  - a. Kentville Police Service (21)<sup>45</sup>

<sup>37</sup> RCMP Civilian Members and Public Service Employees are different classifications. For this report, the term *civilian employee* encompasses both.

<sup>38</sup> RCMP. (2020). Summary of H Division RCMP Resources- January 2020. Author. (GOC00000154\_0001) Note: the RCMP Multi-Year Financial Plan 2021/22 to 2023/24 (GOC00000049\_0001) indicates an FTE total of 987.5 (843.5 Regular and Civilian Members and 144 support staff).

- c. Westville Police Service (11)<sup>47</sup>
- d. Annapolis Police Service (4)<sup>48</sup>

The total police employees working for the RCMP in Nova Scotia is 1,427, and the total number of police employees working for the municipal agencies is 1,186.

### Police Agencies by Region

Like the variation in the size of municipal police agencies in Nova Scotia, RCMP detachments throughout the province vary greatly in size, with most detachments organized around larger districts. The following section provides an overview of RCMP deployment throughout the province by region along with an indication of the number of police officers funded by each community. It also sets out the municipal police agencies that exist within each region. Later in this report, there will be a description of other centralized RCMP federal and provincial support services. More detail will also be provided about the support resources within each municipal agency, as well as collaborative agreements in place among agencies.

The Additional Officer Program (AOP) has funded numerous police officer positions in police agencies throughout the province. These positions are accounted for within the staff numbers provided by the municipal police agencies. In the case of the RCMP, those positions are accounted for along with the Centralized Provincial Resources and Shared Positions section on page 93 of this report. But those positions are actually dispersed throughout the province, assigned to Street Crime Enforcement Units, School Safety Resource Officer positions, Community Safety Resource Officer positions, as well as civilian Tech Crime and Crime Analyst positions. The most current data at the time of the writing of this report showed 55 RCMP positions (48 police officers and 7 civilian employees) funded through the AOP as of February 2019. The RCMP staff numbers in the following section are taken from the Summary of H Division Resources- January 2020<sup>49</sup>, which indicated that the AOP accounted for 49 police officer positions and 6 civilian positions. Keeping this discrepancy in mind, and using the RCMP AOP map<sup>50</sup> located in Appendix A, these positions are reflected in the following overview.

While the term *detachment* is used by the RCMP to refer to the actual building to which RCMP officers are assigned, it actually hails back to the agency's military roots that refer to "*the dispatch of a body of troops or part of a fleet from the main body for a special mission or*

<sup>50</sup> RCMP. H Division- Additional Officer Program/Safer Communities Positions, February 2019. Author. Appendix A.

service.<sup>51</sup> There are cases outlined below where the RCMP office or detachment building is shared by complements of officers assigned to different jurisdictions. For example, the Antigonish rural and municipal components of the RCMP share the same building in Antigonish. For the purposes of this report, these separate components are counted as different detachments of police officers.

This quick tour of police detachments and agencies starts in west Hants County and progresses west through the Annapolis Valley and then around the western tip of the province toward Yarmouth. Continuing east along the South Shore toward Halifax, we will then head north toward the New Brunswick border covering Colchester, Cumberland, and eastern Hants County. We will complete the tour of mainland Nova Scotia with Pictou, Antigonish, and Guysborough Counties. Cape Breton Island's police agencies will then be outlined.

### Hants (west) and Kings Counties

1. **Hants West District RCMP**<sup>52</sup> is a single detachment with a complement of seventeen police officers and two civilian employees.
  - Hants West Detachment:
    - Windsor Rural- fifteen police officers
  - Funding: West Hants County- fifteen police officers under the PPSA.<sup>53</sup>

36. **Wagmatcook RCMP**<sup>90</sup> detachment serves the Watmatcook First Nation in the area of Victoria County with a complement of four police officers.

- Funding: Federal/provincial- four police officers under a CTA.

37. **Cape Breton Regional Police**<sup>91</sup> is the municipal police service for the Regional Municipality of Cape Breton, which covers the entire County of Cape Breton including all communities and rural areas. The police service has a complement of 200 police officers and thirty civilian employees.

### Overview of Agencies and Detachments by Size

Much of the of the policing in Nova Scotia is carried out by relatively small teams of police officers, even though they may be members of larger agencies, such as the RCMP.

The list of RCMP detachments with the number of staff assigned to each location, when added to the list of municipal police agencies, provides a clear picture of the distribution of frontline police staff across Nova Scotia. In addition to adding the detachments to the list, two

<sup>90</sup> Ibid.

<sup>91</sup> R. Hutchings, Supt., CBRP. Correspondence of 28 May 21.

categories of RCMP staff have been added to the *Large Agency* category as they represent substantial contingents of police officers and civilian employees who support provincial and federal RCMP policing operations. Such positions in the municipal agencies have been included in their numbers.

As with the preceding maps, the RCMP detachments and support service groups are highlighted in **RED** while the municipal agencies are highlighted in **BLUE**.

1. Large agencies and **RCMP Support Services** (more than 100 police officers):

- **Halifax Regional Police**
- **Cape Breton Regional Police Service**
- **RCMP Centralized Provincial Resources and Shared Positions<sup>92</sup>**
- **RCMP Federal Policing<sup>93</sup>**

2. Medium agencies/detachments (21-55 police officers)(9 agencies)

- **Truro Police Service**
- **Lower Sackville (HRM)**
- **New Glasgow Regional Police Service**
- **Bridgewater Police Service**
- **Cole Harbour (HRM)**
- **Amherst Police Department**
- **New Minas**
- **Tantallon (HRM)**
- **Kentville Police Service**

3. Small agencies/detachments (11-20 police officers) (17 agencies)

- **Stellarton Police Service**
- **Bridgewater**
- **Kingston**
- **Yarmouth Town**
- **Yarmouth County**
- **Bible Hill**
- **Eskasoni First Nation**
- **Enfield**
- **Hants West**
- **Stellarton**

With an estimated population of approximately 975,898<sup>95</sup> in the first quarter of 2020, Nova Scotia has slightly less than half of its population<sup>96</sup> policed by fifty-nine agencies/detachments<sup>97</sup>. The largest of these agencies/detachments have fewer than fifty-five frontline uniformed police officers. 41% (n=24) of these fifty-nine agencies/detachments have five-ten police officers, 29% (n=17) of those fifty-nine agencies or detachments have fewer than five police officers.

The other half of the province's population live in the Halifax Regional Municipality (HRM) and the Cape Breton Regional Municipality (CBRM). In the case of HRM, a combination of Halifax Regional Police and eight (8) RCMP detachments police the communities that lay within its borders.

There are 894 municipal police officers in Nova Scotia, and 1,012 RCMP officers.

<sup>95</sup> Canada. Statistics Canada, 2021. Population estimates, quarterly. <sup>97</sup> This excludes all agencies and detachments in CBRM and HRM.

## Additional RCMP Resources

When describing the deployment of police resources, both municipal and RCMP, around the province in the preceding sections, there was mention made of the RCMP's **Centralized Provincial Resources and Shared Positions**, as well as the RCMP's **Federal Policing Resources**.

### Centralized Provincial Resources and Shared Positions

**Centralized Provincial Resources and Shared Positions**<sup>98</sup> are funded under the PPSA and include services such as:

- Street Crime Enforcement Unit police officers, School Safety Resource Officers, and Intelligence Analysts (49 police officers and 6 civilians). These positions are not charged back to the communities where they are assigned as they are funded through the Additional Officer Program<sup>99</sup>.
- Case Managers (4 police officers)
- Criminal Intelligence Service Nova Scotia (14 police officers and 5 civilians)
- Commercial Crime Section (7 police officers and 1 civilian)
- Communication Technology (6 civilians)
- Community Policing Service (3 police officers and 5 civilians)
- Crime Stoppers (1 police officer)
- Criminal Operations (including Special Projects) (5 police officers and 3 civilians)
- Division Crime Analysis Section (1 police officer)
- District Officers (2 police officers and 2 civilians)
- Underwater Recovery Team (1 police officer)(additional team members drawn from other assignments)
- Emergency Response Team- Provincial (3 police officers)(additional team members drawn from other assignments).
- Eskasoni Community Policing/Victim Services (1 police officer)
- First Nation Family Violence (1 police officer)
- Human Trafficking Unit (2 police officers)
- Forensic Identification Services (15 police officers and 1 civilian)
- Sipekne'katik First Nation (Indian Brook) (provincial)(0.5 civilian)
- Informatics Operations Support (2 civilians)
- Internet Child Exploitation Unit (5 police officers)
- Legal Assistance Support Team (2 police officers)
- Major Case Management (3 civilians)

<sup>98</sup> RCMP. (2020). Summary of H Division RCMP Resources- January 2020. Author. (GOC00000154\_0001).

<sup>99</sup> The Additional Officer Program is a funding program that began in 2007 with a federal government initiative to increase the number of police officers in communities across Canada. Nova Scotia continues to fund additional positions through this program. See appendix A.

- Advisory NCOs (5 police officers)
- Operational Communication Centre (One of four Public Safety Answering Points in Nova Scotia) (2 police officers and 52 civilian employees)

While most of these positions may be centralized, in that they are not attached to a specific detachment, they all support the RCMP's frontline policing at the detachment level. The degree to which these RCMP services support municipal police agencies is addressed in the next section. Other positions, such as the Forensic Identification Services technicians and the AOP positions in the first bullet, are located throughout the province in detachments but are not part of the detachment complement.

#### Federal Policing

Federal policing services are provided by the RCMP in all provinces regardless of whether the RCMP serves as the provincial police service.

The Minister of Public Safety and Emergency Preparedness, Bill Blair, described the RCMP Federal Policing mandate as follows,

Through Federal Policing, the RCMP prevents, detects, and investigates national security, cybercrime, and transnational and serious organized crime, including financial crime. In addition, it enforces federal statutes, conducts international

MCC

Structure of Policing in Nova Scotia

MacKnight

policing activities, and upholds Canada's border integrity and the security of significant government-led events, designated officials and dignitaries.<sup>100</sup>

The RCMP describes the Federal Policing function as follows,

The RCMP's Federal and International Operations Directorate provides policing, law enforcement, investigative and preventative services to the federal government, its departments and agencies and to Canadians.

Federal and International Operations works to ensure the safety and security of Canadians and their institutions, domestically and globally, through intelligence-based prevention, detection, investigation, and law enforcement measures taken against terrorists, organized criminals, and other criminal activity.<sup>101</sup>

In Nova Scotia, the Federal Policing Resources<sup>102</sup> include, but are not limited to, services such as,

- Criminal Intelligence Service Canada NS (1 police officer and 1 civilian)
- Combined Forces Special Enforcement Unit (4 police officers and 1 civilian)
- Criminal Operations- Federal (2 police officers)
- Divisional Crime Analysis Service (15 civilians)
- Emergency Response Team- Federal (3 police officers)
- Explosives Disposal Unit (team of technicians trained to safely handle and dispose of explosives and detonators<sup>103</sup>), and Chemical, Biological, Radiological, Nuclear Explosives (2 police officers)
- Federal Computer Support (2 civilians)
- Federal Operations and Intelligence (1 police officer)
- Federal Policing Officer (2 police officers and 1 civilian)
- Federal Serious and Organized Crime (52 police officers and 3 civilians)
- Federal Special Operations (1 police officer)
- Federal Support (1 police officer)
- Human Source (3 police officers and 1 civilian)
- Legal Applications Support Team (1 police officer)
- Major Case Management (8 civilian positions)
- Marine Security Operations Centre (4 police officers)

### RCMP Services in Support of Municipal Agencies

Some of the Centralized Provincial and Federal Policing<sup>104</sup> resources that were reviewed in the previous section are deployed regularly to support municipal agencies. Several municipal Chiefs of Police indicated so in providing information for this report, some stating that the support was part of the RCMP's role as the provincial police service.<sup>105</sup> Most often mentioned were the Forensic Identification Services and the Major Crime Unit. The PPSA does address the ability of the Minister to require that the RCMP provide temporary assistance, from time to time, to other police services in the province<sup>106</sup>. The companion document sets out under the interpretation section of Article 2, the following:

The PT Minister, in consultation with the CO<sup>107</sup>, has the authority to direct the Service to provide assistance or special expertise on a temporary basis to other police agencies/services in the province or territory. It is recommended that PTs and their respective RCMP divisions meet to discuss divisional temporary assistance policies (including cost recovery), procedures (including procedures for level of consultation with PT Minister i.e. delegation).<sup>108</sup>

MCC

Structure of Policing in Nova Scotia

MacKnight

As part of Service Exchange, the Province of Nova Scotia pays for specialized PPSA resources available to all police services in the province. Provincial Support Services include such units as Major Crime, Emergency Response Team (ERT), Traffic Services, Victim Services, Forensic Identification, Internet Child Exploitation, and Police Dog Services. Municipalities policed by the RCMP have access to these specialized resources to support them as if they had a large standalone service. The model is both effective and efficient as these resources are shared by all municipalities across the province.<sup>111</sup>

This issue was raised with an RCMP liaison for this report and the following response was received:

We do provide services but there are questions as to if, how and when we do or will assist other police agencies and questions such as cost recovery and if assisting other police agencies compromises our own ability to provide adequate services etc.

Although the RCMP does currently provide temporary specialized assistance, (such as ERT, PDS, Ident. and Major Crime etc.) to municipal police agencies when they don't have the capacity or expertise to provide those policing services themselves, there is no formal agreement that the RCMP will automatically provide those services to municipal police services. RCMP has the latitude under the Nova Scotia Provincial Police Service Agreement (NS PPSA) to work with the Provincial Minister to identify and stop doing duties or services it is currently doing that are incompatible with the effective and efficient delivery of police services in the province, such as when specialized services provided to municipal agencies without cost recovery, are impacting the RCMP's resources and ability to provide services to communities it serves under the PPSA or MPSA.

The RCMP also has the ability to work with the Provincial Minister to arrive at an understanding on how the Province expects the RCMP as the Provincial Police Service to assist municipal police services. These discussions are beginning with the Province, as well as discussions with the Province and other municipal agencies regarding policing and adequacy standards. A potential positive outcome of the latter discussions, will be to determine the minimum specialized policing services that each police agency in the province is expected to have

---

<sup>111</sup> RCMP. RCMP Policing Agreements in Nova Scotia. Author. (GOC00033767\_0001).

available, either from within their own service or, from another service, (along with the appropriate cost recovery for provision of that service).<sup>112</sup>

While this matter appears to be unsettled at this time, it seems clear that currently, and during the period that is the focus of this report, the RCMP were providing support services to municipal police agencies.

## Overview of Municipal Police Agencies

With the addition of the provincial and federal RCMP resources described in the previous section, the full scope of the support in place for frontline RCMP officers becomes apparent. These types of support services are also available to frontline municipal police officers from their own agencies, or through formal or informal agreements with the RCMP or other municipal police agencies.

### Amherst Police Department

With a complement of twenty-four police officers and six civilian employees, this medium sized agency has most of its police officers assigned to the patrol function, with others assigned to Street Crime, Community Policing, and Major Crime. During the COVID-19 pandemic, these police officers assigned to specialized units were reassigned to patrol.

- Support agreements/integration, formal and informal,
  - Informal agreement with the RCMP for mutual backup on high-risk calls for service, as well as for non-emergency operational issues.
  - Formal agreement with the RCMP for membership in the Cumberland Integrated Street Crime Enforcement Unit. (Two positions are funded under the Additional Officer Program<sup>113</sup>)

### Annapolis Royal Police Service (ARPS)

With a complement of four police officers and no civilian employees, the ARPS is a patrol-based police agency with no specialized services. They rely on the RCMP for support services due to their role as the provincial service.<sup>114</sup> There is no formal agreement in place for the provision of such services from the RCMP. The RCMP Police Reporting and Occurrence System (PROS) program is used by ARPS for their police reports, and they also use the RCMP cells when needed. They rely on the RCMP for backup on high-risk calls for service and reciprocate that service to the RCMP. The ARPS has a Memorandum of Understanding in place with the Bridgewater Police Service (BPS) for the provision of dispatch services by BPS.

<sup>112</sup> J. Spence, Sgt. RCMP. Email 5 Aug21.

<sup>113</sup> D. Pike, Chief of Police, APD. Email of 23 April 21.

<sup>114</sup> M. Kane, Chief of Police, ARPS. Email of 21 April 21.

MCC

MacKnight

- Support agreements/integration, formal and informal,
  - Informal agreement with RCMP for mutual backup on high-risk calls for service.
  - Long-standing informal agreement with RCMP for investigative support.<sup>115</sup>
  - Agreement in place for use of RCMP PROS and cells.
  - Formal Agreement with Bridgewater Police Service for the provision of 24/7 communications services.<sup>116</sup>

#### **Bridgewater Police Service (BPS)**

This medium-sized police service has a complement of twenty-six police officers and twelve civilian employees. Along with the patrol function, the BPS have a Police Service Dog and two police officers assigned to a General Investigation Section addressing serious crimes. They also have a School Safety Resource Officer, a police officer assigned to the South Shore Integrate Street Crime Enforcement Unit, and a criminal intelligence officer assigned to Criminal Intelligence Service Nova Scotia (CISNS) working out of the BPS office. Four police officers are trained as Scenes of Crime Officers (SOCO) which enable them to process crime scenes other than homicides. Evidence is sent to the RCMP Forensic Identification Services.<sup>117</sup> The BPS also has a police officer seconded to the NS Department of Justice as an instructor to police on various techniques in gathering evidence of impaired driving.

- Support agreements/integration, formal and informal,
  - Formal agreement with RCMP for membership in the South Shore Integrated Street Crime Enforcement Unit.
  - Formal agreement with RCMP for assignment of a police officer to CISNS.
  - Formal agreement with NS Department of Justice for the secondment of a police officer as a police instructor.
  - Formal agreement with Annapolis Royal Police Service and Kentville Police Service for the provision of 24/7 communications services.<sup>118</sup>

#### **Cape Breton Regional Police (CBRP)<sup>119</sup>**

As the second largest municipal police agency in the province, the CBRPS has a complement of 200 police officers and thirty civilian employees. Specialized units staffed from within the complement of police officers and civilian employee include:

- Major Crime Unit: two sergeants and five constables which includes one domestic violence Investigator,

<sup>115</sup> See page 96 for a discussion of RCMP support services to municipal agencies.

<sup>116</sup> Annapolis Royal Police Service, Bridgewater Police Service. 2020. Memorandum of Understanding.

<sup>117</sup> S. Feener, Chief of Police, BPS. Email of 23 April 21.

MacKnight

- General Investigative Section: one sergeant and four constables, which includes one arson investigator,
- Forensic identification Unit: one Sergeant and two constables,
- Street Crime Unit: one sergeant and five constables,
- Community Safety Enforcement Unit: one sergeant and four constables which includes one investigator who is assigned to human trafficking,
- Internet Child Exploitation Unit: one sergeant and one constable,
- Polygraph Section: one sergeant,
- Traffic Safety Unit: one sergeant and three constables,
- K9 Unit: one sergeant and two constables,
- School Liaison Officers: four constables assigned to several schools in the CBRM,
- Mental Health Officer: one constable assigned to the Cape Breton Regional Hospital,
- Jailers (Special Constables): one supervisor and seven civilians,
- Crime Analyst: one civilian,
- Domestic Violence Coordinator: one civilian.

The CBRP has also entered into the following agreements:

- RCMP integrated Traffic Section: two CBRPS police officers are assigned; mandate is to assist RCMP traffic services from Cape Breton to Antigonish.
- Criminal Intelligence Service Nova Scotia: one police officer assigned.
- Safer Communities and Neighborhood (SCAN): DOJ has one civilian SCAN position with the CBRP.
- Cape Breton-Victoria Regional School Board: four police officers assigned to several schools in the CBRM.
- NS Department of Justice: Additional Officer Program (AOP) provides funding for nineteen police officers.
- Membertou First Nation- currently in a 2-year agreement to police this community.

The CBRP has police officers assigned to the following operational support teams:

- Emergency Response Team: Sixteen police officers,
- Public Safety Unit: twenty-six police officers,
- Marine Unit: eight police officers,
- Drone Support: two police officers.

#### **Halifax Regional Police (HRP)<sup>120</sup>**

With a complement of 532 police officers and 209 civilian employees, HRP is the largest

---

<sup>120</sup> N. Ritcey, Division Manager, Corporate Affairs, HRP. Emails of 21 July 21.

municipal police agency in the province. The HRP polices the urban core of the Halifax Regional Municipality (Halifax, Dartmouth, Bedford) and all communities extending from Bedford to the Sambro Loop. The HRM has contracted with the RCMP to police the remainder of the municipality, which covers the entirety of Halifax County consisting of largely suburban and rural communities. As a result of this hybrid model, there are several integrated operational groups.

The six divisions of the HRP are:

1. **Patrol Division:** uniformed police officers patrolling neighbourhoods on foot or in police vehicles, responding to calls for service. Approximately 307 police officers assigned to Patrol; divided into four watches. Each watch has police officers who are assigned to one of the three patrol zones: Central, East and West. Patrol Division also includes Divisional Quick Response Units that operate in a plain clothes capacity.
2. **Criminal Investigations Division (CID):** police officers investigate cases of more complex criminal offences. There are 115 HRP police officers, twenty-nine RCMP officers<sup>121</sup>, and twenty-nine HRP civilian employees assigned to the division. The division serves the entire areas of HRM. Within CID there are five sections:
  - **General Investigation Section (GIS)** investigates residential and commercial break and enters, robberies/attempted robberies, stolen motor vehicles, arsons, and serious assaults.
  - **Investigative Support Operations (ISO)** section provides the following support services: crime analysis, criminal intelligence, cybercrime, forensic identification and polygraph.
  - **Special Investigation Section (SIS)** investigates homicides, attempted homicides, serious assaults in which death may occur, unsolved major cases and sexual assaults.
  - **Special Enforcement Section (SES)** focuses on drug trafficking, firearm offences, gang-related crime, human trafficking, information on preventing human trafficking, online luring and exploitation of children, missing persons, high-risk offenders, and people with outstanding warrants.
  - **Special Victims Section (SVS)** focuses on information for victims of sexual assault and information on what happens when you report a sexual assault.
3. **Support Division:** responsible for various operational functions. There are sixty-one police officers and forty-nine civilian employees. There are seventy-six full-time

---

<sup>121</sup> RCMP submission indicates that there are 25 RCMP officers assigned to CID.

Integrated Emergency Services (IES) dispatchers and five part-time IES dispatchers assigned to the Support Division, which includes the following units and sections:

- Prisoner Care
- Aviation Security Unit
- Community Relations and Crime Prevention Unit
- Records & Courts
- K9 Unit
- Ports Unit
- Traffic Support
- Traffic Unit/Crossing Guards
- Integrated Emergency Services (IES)
- FOIPOP/CORPS of Commissionaires
- Victim Services
- Mounted Unit
- Mobile Mental Health Unit
- Liquor Enforcement Unit

4. Administration Division: provides administrative support to the organization. There are nine police officers and twenty-nine civilian employees assigned to the Administration Division. This division includes the following units and sections:

- Human Resources
- Training
- Information Technology
- Financial Services
- Property & Evidence

5. Corporate Affairs Division: manages relationships with HRP's variety of external and internal stakeholders and provides integrated support for strategic organizational functions. There are eight civilian employees and two police officers assigned to the division, which includes the following units and sections:

- Corporate Communications & Media Relations
- Research & Development
- Corporate Analyst
- Policy & Planning

6. Professional Standards Division: provides oversight and support to uphold the integrity and professionalism of the organization. There are eight police officers and one civilian employee assigned to the Professional Standards Division, which includes the following units and sections:

- Professional Standards Investigative Unit

MCC

Structure of Policing in Nova Scotia

MacKnight

- Audit & Oversight
- Diversity & Inclusion
- Departmental Sergeant Major functions

#### **Kentville Police Service (KPS)**<sup>122</sup>

With a complement of sixteen police officers and five civilian employees, this municipal police agency has police officers assigned to patrol, street crime, and criminal intelligence. There are also five auxiliary police officers not included in the approved complement number.

Support Agreements/Integration, formal and informal

- Formal agreement with RCMP for membership in the Valley Integrated Street Crime Enforcement Unit,
- Formal agreement with the RCMP for the secondment of a police officer to Criminal Intelligence Service Nova Scotia,
- Reference made to support services from the RCMP such as Forensic Identification, Major Crime Unit, and Emergency Response Team through the Provincial Policing Services Agreement,<sup>123</sup>
- Formal agreement with Bridgewater Police Service for them to provide 24-hour 911 call-taking and police dispatch.

#### **New Glasgow Regional Police Service (NGRPS)**<sup>124</sup>

Serving as the regional municipal police service for the towns of New Glasgow and Trenton, the NGRPS has a complement of thirty-three police officers and nine civilian employees. The department has police officers deployed to their major crime unit, Criminal Intelligence Service NS (CISNS), as well as the Pictou County Integrated Street Crime Enforcement Unit (PCISCEU). They also have dedicated positions for traffic enforcement, police service dog, forensic identification, and school safety resource officer. Five civilian employees staff the service's communications centre.

- Support Agreements/Integration, formal and informal
  - MOU with RCMP for three police officers to be assigned to the integrated street crime unit,
  - MOU with RCMP for the assignment of a police officer to CISNS,
  - Informal agreement for backup and other operations.

<sup>122</sup> J. Cecchetto, Chief of Police, KPS. Email of 13 April 21.

<sup>123</sup> See page 96 for a discussion of RCMP support service to municipal agencies.

<sup>124</sup> S. Chisholm, Chief of Police, NGRP. Email of 17 May 21.

**Stellarton Police Service**<sup>125</sup>

With a complement of thirteen police officers and six civilian employees, this small municipal police agency serves the Town of Stellarton, which is located in Pictou County adjacent to the communities of Westville, New Glasgow, and Trenton. The agency is patrol based, with no specialty services.

- Support agreements/integration, formal and informal,
  - Formal agreement with RCMP for one police officer assigned to the Pictou County Integrated Street Crime Enforcement Unit,
  - Formal agreement with the Town of Westville to provide lock-up facilities and dispatch services,
  - Informal mutual aid agreement with Westville Police Service to assist on calls for service and training,
  - Informal agreement with RCMP for use of Forensic Identification Services and Major Crime Unit.

**Truro Police Service (TPS)**<sup>126</sup>

With a complement of thirty-six police officers and fifteen civilian employees, this medium-sized police agency has police officers assigned to specialty units such as the RCMP Major Crime Unit, Police Service Dog, Drug Enforcement, Forensic Identification, Criminal Investigations, and the Colchester Integrated Street Crime Enforcement Unit.

- Support agreements/integration, formal and informal,
  - Formal agreement with RCMP for Colchester Integrated Street Crime Enforcement Unit.
  - Formal agreement with the RCMP for the secondment of a police officer to the RCMP Northeast Nova Major Crime Unit, thereby extending the unit's responsibility to Truro for the investigation of major crime.
  - Formal agreement with the RCMP for the secondment of a police officer to Criminal Intelligence Service Nova Scotia.
  - Informal agreements with other municipal agencies and RCMP for operational support.

**Westville Police Service (WPS)**<sup>127</sup>

With a complement of ten police officers and one civilian employee, this small municipal police

---

<sup>125</sup> M. Hobeck, Chief of Police, SPS. Email of 20 May 21.

<sup>126</sup> D. MacNeil, Chief of Police, TPS. Email of 19 April 21.

<sup>127</sup> H. Dunbar, Chief of Police, WPS. Email of 20 May 21.

service is primarily patrol based with one officer assigned to the Pictou County Integrated Street Crime Enforcement Unit (PCISCEU).

- Support Agreements/Integration, formal and informal
  - MOU with Stellarton Police Service for dispatch service and the use of their cellblock facilities.
  - MOU with RCMP for one police officer assigned to PCISCEU.
  - Informal mutual aid agreement with Stellarton for mutual aid and cost-share on equipment.
  - Mutual aid agreement since the 1980s with the town of Stellarton, Trenton, and New Glasgow.

## Interagency Collaboration: Government Relations, Integrated Policing, and Interoperability

### Government Relations

The Nova Scotia Chiefs of Police Association<sup>128</sup> has representation from all police agencies in Nova Scotia including municipal police departments, the RCMP, the Military Police, and other enforcement agencies. This group represents the interests of the police community at the local and provincial levels and, through the Canadian Association of Chief of Police, at the national level.

### Integration

For the purposes of this report, integrated policing refers to different police agencies entering into formal agreements to work together to address shared priorities. Interoperability in this context refers to the ability of police agencies' systems to communicate with one another, allowing for the appropriate sharing of data through computer systems, and for police officers to communicate in real time during emergencies. While the policing model in the Halifax Regional Municipality has the highest degree of interagency integration in the province, there are other areas where municipal agencies and RCMP work collaboratively. One example is found in Pictou County.

---

<sup>128</sup> Nova Scotia Chiefs of Police Association. <http://nschiefs.ca/about-us/>. Author.

MCC

Structure of Policing in Nova Scotia

MacKnight

## Inter-Agency Collaboration in Pictou County

Serving the community of Westville, in northern Nova Scotia's Pictou County, the **Westville Police Service** employs ten police officers and one civilian employee. The structure of this police agency is patrol based, although they do have one police officer assigned to the Pictou County Integrated Street Crime Enforcement Unit.

Westville shares a municipal boundary with the town of Stellarton to its east. At Stellarton's northern boundary lie the towns of New Glasgow and then Trenton, both of which are policed by the New Glasgow Regional Police Service, while Stellarton has its own municipal police agency, the Stellarton Police Service.

The Stellarton Police Service serves the Town of Stellarton with a complement of thirteen police officers and six civilian employees, and like the Westville Police Service, they are a patrol-based service with one police officer assigned to the Pictou County Integrated Street Crime Enforcement Unit. With their own dispatch services and cellblock facility, Stellarton provides these services to Westville on a cost-recovery basis. Each of these agencies rely on one another for support in operations, and both also rely on the RCMP for Forensic Identification Services and Major Crime Unit support.<sup>129130</sup>

The New Glasgow Regional Police Service (NGRPS) is the municipal agency that polices the towns of New Glasgow and Trenton. With a complement of thirty-three police officers and nine

<sup>129</sup> H. Dunbar, Chief WPS. Emails of 12-20 May 21.

<sup>130</sup> M. Hobeck, Chief SPS. Email of 20 May 21.

civilians this service has twenty police officers on patrol as well as three assigned to the Pictou County Integrated Street Crime Enforcement Unit and three to their Major Crime Unit. They also have a Forensic Identification Technician, a police officer assigned to a police service dog, a traffic specialist, and School Resource Officer. They have a police officer assigned to CISNS who works together with an RCMP member out of the NGRPS office.

If we acknowledge that the Pictou Town RCMP and the Pictou County RCMP do have different jurisdictions of responsibility, we then have five townships (Pictou, Westville, Stellarton, New Glasgow, and Trenton), along with the rural areas of the county, policed by five different groups of police officers from four police agencies (RCMP Pictou Rural, RCMP Pictou Town, Westville Police, Stellarton Police, New Glasgow Regional Police).

This cluster of townships has been engaged in a cooperative model of policing that engages their respective police agencies to support one another, both formally and informally, in order to leverage their particular assets. The Stellarton and Westville police agencies have used their close relationship to their benefit, as they have with the New Glasgow Regional Police. Stellarton provides dispatch and holding-cell services to Westville through a formal written agreement that provides for cost recovery. There has also been an informal mutual aid agreement in place between the towns of Westville, Stellarton, and New Glasgow since the 1980s.<sup>131</sup> This relationship extends to supporting each other with policing operations, and also in sharing the cost of purchasing new equipment that they then share between the agencies.<sup>132</sup>

#### [Pictou County Integrated Street Crime Enforcement Unit](#)

The Stellarton, Westville, and New Glasgow Regional police agencies, together with the Pictou RCMP, have entered into a Memorandum of Understanding to assign police officers to the Pictou County Integrated Street Crime Enforcement Unit (PCISCEU): This group of police officers is part of a larger network of similar units throughout Nova Scotia, and is tasked with the investigation of,

...organized illegal activity, intelligence led law enforcement initiatives, targeted crimes involving sexual exploitation, assault, drugs and safety in schools and/or street crime initiatives or any other investigation deemed appropriate by the JMT.<sup>133</sup>

The agencies contribute staff to the unit as follows:

- Westville Police Service- one officer
- Stellarton Police Service- one officer

<sup>131</sup> H. Dunbar, Chief. Email of 21 May 21.

<sup>132</sup> Ibid.

<sup>133</sup> Memorandum of Understanding, Pictou County Integrated Street Crime Enforcement Unit, 2016. Section 4.1.1.

MCC

Structure of Policing in Nova Scotia

MacKnight

- New Glasgow Regional Police Service- three police officers
- Pictou RCMP- two police officers

Recognizing that police jurisdictional boundaries do not inhibit criminal activity, the PCISCEU is used to target criminal activity that affects all of the communities who contribute to its complement. Equity in the unit's deployment is recognized in the agreement, which states that it is the intent of the partners to,

...ensure meaningful and equitable law enforcement throughout the area of jurisdiction of the PCISCEU.<sup>134</sup>

Governance and operational oversight of the unit fall to the Joint Management Team, which is comprised of the Chiefs of Police for each agency and the District Commander for the RCMP.<sup>135</sup>

### Integrated Street Crime Enforcement Unit Model

The street crime unit model that is in place in Nova Scotia at this time appears to have had its genesis in the mid-2000s when the federal government began providing partial funding for frontline policing. By 2008, Nova Scotia had funded 150 new positions, some of which went to street crime units.<sup>136</sup> There are integrated units in several areas, and others comprised of RCMP detachments coming together. Halifax Regional Police have operational units operating with similar but broader mandates<sup>137</sup>, and the Cape Breton Regional Police has a stand-alone Street Crime Unit.

The following street crime units are currently in place in Nova Scotia:

- Antigonish/Guysborough RCMP SCEU<sup>138</sup>
- Halifax District RCMP Street Crime Enforcement Unit <sup>139</sup>
- Inverness/Richmond RCMP Street Crime Enforcement Unit<sup>140141</sup>
- Annapolis County RCMP Street Crime Enforcement Unit<sup>142</sup>

### Interoperability

Two key aspects of interoperability in policing are the ability for frontline police officers to be able to communicate with one another during critical incidents, and the ability to appropriately share relevant information from police databases.

### Communications

A Trunked Mobile Radio (TMR) system was implemented in Nova Scotia in 2001 and was updated in 2015 (TMR2) to provide additional capabilities. This system allows police officers from different agencies to communicate with one another once assigned to a mutual aid talk group. A mutual aid talk group is essentially a channel to which the police agency users would be assigned after a specific request was made and approved by staff at a Public Safety Answering Point. Encrypted communication became available with TMR2 in 2015 to all police agencies that had the appropriate radios, which at that time was all Nova Scotia RCMP, Halifax RP, and Cape Breton RP. New Glasgow RP came on in 2018; Amherst PD in February/March 2020; Stellarton PS and Westville PS also came on 2020; Annapolis Royal PS, Bridgewater PS, Kentville PS, and Truro PS came on in 2021<sup>144</sup>. Unencrypted communications are subject to being scanned by the general public who then may become aware of sensitive police

<sup>144</sup> RCMP. 2021. Structure of Policing in Nova Scotia in April 2021, H Division Operational Communication Centre. Author.

operations, and possibly compromise the security of the operations and safety of the police officers and the public.

#### Information Sharing

Police agencies in Nova Scotia are able to perform queries of databases that hold information that could be relevant to police operations. Searches performed through the Canadian Police Information Centre (CPIC- part of the National Police Services, see page 118) can be customized to include a query of the Police Information Portal (PIP) which can access some information from police agencies' local records within and beyond Nova Scotia. Queries may also be made of the Nova Scotia Justice Enterprise Information Network (JEIN).

### Police Training- All Agencies

**Recruit Training:** The government of Nova Scotia's Department of Justice Public, Safety and Security division website indicates that those wishing to become police officers must have completed grade 12 with academic post-secondary level courses in math and English, and that preference is often given to those with some post-secondary education.<sup>145</sup> The Nova Scotia *Police Regulations* also indicates that the person must be a graduate of a recognized training program. While the regulations are silent as to the recognized programs, the Policing Services website list several police academies.

- École nationale de police du Québec
- Halifax Regional Police
- Holland College
- Justice Institute of British Columbia
- Ontario Police College
- RCMP Training Academy
- Saskatchewan Police College
- Toronto Police College

As of 2019 the Halifax Regional Police, Police Science program has been deemed to be a recognized program.<sup>146</sup>

**In-service Training:** The NS Department of Justice (DOJ), Public Safety and Security division has some responsibility to coordinate in-service training for the police<sup>147</sup> and their role is discussed further under Role of the Provincial Government later in this report. Aside from any training coordinated by DOJ, policing agencies are involved in a continuous cycle of training and

<sup>145</sup> Nova Scotia. [https://novascotia.ca/just/Policing\\_Services/training.asp#university](https://novascotia.ca/just/Policing_Services/training.asp#university). Online 12 Aug 21.

<sup>146</sup> D. Kinsella, Chief of Police, HRP. Email of 1 Sept 21.

<sup>147</sup> Nova Scotia. [https://novascotia.ca/just/Policing\\_Services/](https://novascotia.ca/just/Policing_Services/). Online 1 Sept 21.

certification in certain technical competencies. Some skills require regular recertification such as firearms qualifications. Others may relate to investigative techniques such as interviewing or accident investigation. Each of the police agencies engaged in the report provided information about their training. It was common that the agencies were training together and using the services of qualified instructors from other agencies. This cooperative relationship saw agencies, regardless of size, hosting in-service training where they had qualified instructors. Naturally the larger agencies, such as the RCMP and HRP appear to have a larger footprint on assisting with in-service training. Several agencies reported that in-service training was also accessed through police agencies outside of Nova Scotia.

The Halifax Regional Police Block Training Overview<sup>148</sup> provides an example of how a large municipal police agency approaches the inherent challenges of delivering training in a large workforce. The RCMP's Mandatory and Operational National Training Matrix provided the same overview in addressing training on a national basis across the various layers of civilian and police officer employees, as well as supervisors and managers.

In-service training is also conducted by the Atlantic Police Academy aside from its recruit training course. The Canadian Police College does not conduct recruit training, but as part of the National Police Services concentrates on advanced and specialized training for all police agencies through programs such as:

- Explosives Training
- Forensic Identification
- Indigenous Policing
- Investigative Techniques
- Leadership
- Polygraph
- Technological Crime

**Post-Secondary Education and Career Development Training:** There are several post-secondary police related programs in Canada, including:

- Dalhousie University, Henson College- Certificate in Police Leadership
- University of Regina, Police Studies
- Wilfrid Laurier University, Online BA in Policing

#### [Comments from Municipal Chiefs of Police on Training](#)

The appendix to this report contains samples of training records from several agencies (RCMP, HRP, and Amherst PD) that provide a sense of the ongoing training that police officers are

<sup>148</sup> See excerpt in Appendix A and link to the full document in Appendix B.

required to complete. Some of the courses listed in the records would be job-specific rather than mandatory across the agency.

The following are comments from the several agencies regarding their training practices:

**Truro Police Service:** *Annual mandatory training is set from the NS DOJ and covers use of force and firearms, which we complete each year. Our firearm training program far exceeds the minimum qualification set to DOJ.*

*All other training is determined by operational needs, or identified via employee performance review process. We have a standard suite of course for all new hires i.e. equity/ diversity, ethics, etc. and for those officer that transfer into our Criminal Investigation Division.*

*We utilize the Canadian Police College, Atlantic Police Academy, CPKN, DOJ, and take advantage of training offered by other provincial agencies like the RCMP, or HRP etc.<sup>149</sup>*

**Annapolis Royal Police Service:** *We have our own trained use of force and firearms instructor. Mandatory-:*

1. Use of Force ( In house )
2. and Kentville Police (TASER)
3. Firearms ( In House )

*All members have been trained at a recognized police college or service. All are PROS (Police Reporting Occurrence System) trained, EVOG (Emergency Vehicle Operator Course) trained and 2 are breath Tech users, 1 member trained on Carbine (police rifle).<sup>150</sup>*

**Cape Breton Regional Police:** *We provide in house training for our new K9 members (Tracking, Drug detection). In addition, there are many in house courses provided during the year, Domestic Violence, Statement Analysis, Interviewing Course, CPKN courses online. There are courses/training provided by the Dept. Of Justice (DRE, SFST, ASD) and we follow the Policing Standards/Police Governance standards in Nova Scotia.*

*Members attend various courses at the Atlantic Police Academy, Canadian Police College and the OPP Academy training. We also send members on other training that is required for Specialized Units (ERT/PSU Toronto Police Service), (Traffic Courses OPP). There are also other police related courses taken at Cape Breton University, Henson College and other universities across Canada.<sup>151</sup>*

<sup>149</sup> D. McNeil, Chief of Police, TPS. Email of 22 April 21.

<sup>150</sup> M. Kane, Chief of Police, ARPS. Email of 21 April 21.

<sup>151</sup> R. Hutchings, Supt, CBRP. Correspondence of 25 May 21.

MCC

Structure of Policing in Nova Scotia

MacKnight

**Kentville Police Service:** *The training is sent to us yearly as mandatory by DOJ. The policing standards are so old /outdated in NS, we go by the yearly updates. The standards update project is underway again by DOJ after being on a shelf for several years.*

*Regular training is the same as mandatory training for us. It is the DOJ listed mandatory requirements each year. Firearms is every year. Rapid deployment, taser, empty hand, baton, handcuffing, OC, LVNR every two years.*

*Other training & educational opportunities we have taken advantage of (not every member has these) are listed. This is what we have found in the previous 4 years :*

*DV (domestic violence)– train the trainer & yearly updates – sponsored by DOJ*

*DRE (Drug Recognition Expert)– sponsored by province*

*SFST (Standard Field Sobriety Test)– RCMP provides seats*

*Breath Tech – various instructors – RCMP – APA - HRP*

*EAP – I believe its through EHS but Wendy Rafuse does the training/scheduling*

*Phased interview – sponsored by Amherst Police – RCMP instructors*

*APA for u/f (use of force) recerts, and cyber crime training , search warrant courses*

*Halifax – Mental health / Mobile crisis intervention training. Trainers were from the Mobile Mental Health Crisis team*

*Pistol instructor – Halifax Police*

*C8 (patrol rifle) instructor – APA and Halifax Police*

*De-escalation training – sponsored by DOJ, training by APA*

*CPC – Major Crime Investigative techniques, Major Case Management, DIT course, SPAC,*

*-Our CISNS member has had a lot of training through RCMP – not sure of all courses at this time*

*DAL - Henson – Leadership development*

*Child Sexual Assault training – through Community Services*

*Trauma Informed Response to Sexual Assault – through SANE (Sexual Assault Nurse Examiner) program*

*Property Crime Examiner – Training through RCMP*

*SOCO(Scenes of Crime Officer) – through APA*

*ICS (Incident Command System) 100 through 300 – training via EMO*

*Fentanyl response – NS Chiefs – Drug sub-committee*

*Human Rights training – NS Human Rights Commission*

*LEOSH(Law Enforcement Occupational Safety and Health) – Canadian conference/training*

*Sexual Assault Investigation – sponsored by DOJ*

*Human Sources training – RCMP*

*R2MR (Road to Mental Readiness)– RCMP instructors*

*CPTED (Crime Prevention Through Environmental Design) – Halifax Regional Municipality*

*Quality Assurance of files – DOJ*

*Spit hood – online*

*A lot of CPKN (Canadian Police Knowledge Network) online courses – to many to name.<sup>152</sup>*

<sup>152</sup> J. Cecchetto, Chief of Police, KPS. Email of 21 April 21.

**New Glasgow Regional Police:** *In service UOF (use of force), firearms as mandated – annually for firearms. CPKN (Canadian Police Knowledge Network)– online learning. DOJ – as offered. ICIR (Initial Critical Incident Response)– Tabletop exercises for NCO's initiated Fall of 2019.*<sup>153</sup>

**Bridgewater Police Service:** *BPS takes training seriously and provides various avenues through online and in person training which we have developed over the years. We have developed relationships and received training from HRP, RCMP, CBRP, other smaller municipal police in a NS group training. We have jointly trained on Active Shooter/Attacker with Kentville Police Active and Annapolis Royal Police, Saint John Police Service, Canadian Police College, Ontario Police College, Atlantic Police College. We also do our yearly re-certs required by DoJ for Firearms and Officer Safety.*<sup>154</sup>

**Stellarton Police Service:** *Annual firearms/use of force training done inhouse. Courses at the Atlantic Police Academy.*<sup>155</sup>

#### **Westville**

*We currently use an annual training cycle where our mandatory DOJ imposed training is conducted. Further to this we have instituted our own annual qualifications- Vascular Neck Restraint, prone handcuffing techniques, de-escalation techniques and legal articulation. This training is normally conducted during the June time frame as well as weapons platforms qualifications. During the annual training cycle we also conduct a 1 day PD sessions quarterly which will relate to any issues of the day as well as guest lecturers on specified subjects of interest. We are currently taking advantage of residential and distance learning opportunities from other learning institutions. Members are also permitted to apply for related training from relevant and recognized universities. This program has been very well received by our members and has proved itself to be a morale builder as well. We have developed a basic package for all our officers in their respective professional development. For example, each officer will have required coursing in Child Sexual Assault Investigation, Sexual Assault Investigation, the Domestic Violence curriculum as defined by DOJ, PHASE Interviewing, Pure Version Interviewing, other interviewing coursing, SOCO and soon to come online is Sudden Death Investigation. At this point the members will have been identified for skills related to investigation, traffic, etc.*

*Currently the educational requirements are that candidates applying have a grade 12 and be graduates of the APA or other recognized police institutions. In reality most officers have a number of years of university or are graduates.*

<sup>153</sup> S. Chisholm, Chief of Police, NGRP. Email of 17 May 21.

<sup>154</sup> S. Feener, Chief of Police, BPS. Email of 23 April 21.

<sup>155</sup> M. Hobeck, Chief of Police, SPS. Email of 20 May 21.

*Currently we are using the APA for basic skills building, CPC for advanced training of members (MCIT, MCMTC, DIT, etc.) The OPC has been used in the past as well as satellite coursing from other police organizations. The NS DOJ provides a host of investigative coursing as well. The RCMP also supply a number of courses such as PHASE Interviewing, Surveillance Techniques Course, SOCO, Warrant Writing, etc.<sup>156</sup>*

## Other Federal Resources

### National Police Services (NPS)

The National Police Services (NPS) is a suite of programs that is separate from the national or federal police services provided by the RCMP. While administered by the RCMP, the NPS exists in order to serve the police and criminal justice community in its entirety.

The following description of the NPS is taken from the RCMP website.<sup>157</sup>

The RCMP is the steward of the cluster of programs known as the National Police Services (NPS), created following the Federal/Provincial Conference on Organized Crime in 1966. During the Conference, the Federal Government committed to providing a range of services to the policing and the criminal justice communities. The service lines created then were the Canadian Police Information Centre, Criminal Intelligence Service Canada, Fraudulent Cheques, Criminal History / Fingerprint Repository, Forensic Laboratory Services, and the Canadian Police College.

Approximately 70 percent of NPS clients are external to the RCMP<sup>158</sup>. In many instances, the RCMP is the sole provider of these specialized police support services. NPS has grown significantly over the years and currently includes:

- Canadian Anti-Fraud Centre
- Canadian Police College (CPC)
- Canadian Police Information Centre (CPIC)
- Criminal Intelligence Service Canada (CISC)
- Forensic Science and Identification Services (FS&IS)
- Canadian Firearms Program (CFP)
- Violent Crime Linkage Analysis System and National Sex Offender Registry (services provided by Technical Operations)
- National Cybercrime Coordination Unit (NC3)

<sup>156</sup> H. Dunbar, Chief of Police, WPS. Email of 25 May 21.

<sup>157</sup> RCMP. National Police Services, <https://www.rcmp-grc.gc.ca/sps/nps-snp-eng.htm>. Author.

<sup>158</sup> Author comment: This description of the NPS is taken from the NPS website, and therefore the assumption is that this statement is regarding all users of the NPS across Canada, and not Nova Scotia specifically.

As well, a number of advisory bodies assist NPS programs by offering strategic and tactical advice and guidance, such as the NPS Advisory Council, the CPIC Advisory Committee and the National DNA Data Bank Advisory Committee.

Since 1990, NPS has been the subject of several studies and reviews. The Office of the Auditor General tabled reports in 1990, 2000 and 2011 identifying the need to review the mandate of NPS as well as to determine what changes in governance, service delivery, funding and stakeholder engagement would be required to ensure the needs of the law enforcement and criminal justice communities are met, today and in the future.

The National Police Services National Advisory Committee (NPS NAC) provides strategic advice to the Commissioner of the RCMP and to the Federal/Provincial/Territorial Assistant Deputy Ministers Crime Prevention and Policing Committee (ADM CPPC) through the Deputy Commissioner, Specialized Policing Services. NPS NAC consists of senior policing officials, representing all of the provinces and territories, from across Canada.

The NPS NAC mandate is to:

- review the NPS mandate and provide recommendations to ADM CPPC and the Commissioner of the RCMP as it pertains to its relevancy and alignment with the needs of the NPS user community
- recommend strategic priorities for the Commissioner and ADM CPPC's consideration regarding the services to be maintained and delivered to the NPS community, as well as to how these services are to be delivered
- support the exchange of information across the law enforcement community about NPS and its challenges, to ensure all stakeholders have the opportunity to influence the NPS strategic direction
- generally, support the integrity, accessibility, viability and sustained delivery of NPS

The NPS NAC is currently comprised of 17 senior police officers (Deputy Chiefs of Police, Chiefs of Police, and Chief Superintendents) and is chaired by an RCMP Deputy Commissioner. Five of the 17 positions are held by the RCMP, including the Chair, with three more being held by representatives of the three provincial police forces (OPP, SQ, RNC). The remaining nine positions are held by members of municipal police services from across Canada.

**The NPS Programs:**

#### **Criminal Intelligence Service Canada (CISC)**

Criminal Intelligence Service Canada supports the effort to reduce the harm caused by organized crime through the delivery of criminal intelligence products and services. It informs

partners, government and other stakeholders about criminal markets in Canada and assists law enforcement leaders in making decisions regarding organized crime enforcement priorities.<sup>159</sup>

### **Criminal Intelligence Service Nova Scotia (CISNS)**

CISNS is the Nova Scotia provincial bureau of Criminal Intelligence Service Canada (CISC), and thereby a key agency administered by the RCMP as part of the National Police Services. There are ten such provincial bureaus across Canada. The role of each provincial bureau is to analyse information about organized and serious crime in their area and to ensure that the information is shared with its member agencies and CISC through the national databank for criminal intelligence.<sup>160</sup>

The field offices of CISNS are located with police agencies across Nova Scotia and are staffed jointly by RCMP members and police officers from municipal police agencies including:

- Bridgewater Police Service,
- Cape Breton Regional Police Service,
- New Glasgow Regional Police Service,
- Truro Police Service, and
- Kentville Police Service.

### **Canadian Firearms Program(CFP)**

The CFP is part of the National Police Services and supports policing agencies in the investigation of individuals involved in the smuggling, tracking, and criminal use of firearms.<sup>161</sup> Of particular interest to policing, the CFP have several programs that directly support policing:

**National Weapons Enforcement Support Team (NWEST):** Working in partnership with RCMP, municipal, and provincial police services, NWEST supports investigations and the prosecution of persons involved in the illegal movement and criminal use of firearms. Also working with the Canada Border Services Agency (CBSA) to conduct joint investigations to intercept illegal firearms entering Canada through border crossings, and with Global Affairs Canada (GAC) to address the issue of international firearms sales.

NWEST also works alongside U.S. Homeland Security Investigations (HSI) and the U.S. Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) on cross-border smuggling and investigations.

<sup>159</sup> Canada. Criminal Intelligence Service Canada. <https://cisc-scrs.gc.ca/about-ausujet/index-eng.htm>. Online 30 July 21.

<sup>160</sup>Ibid.

<sup>161</sup> RCMP. 2019 Commissioner of Firearms Report. <https://www.rcmp-grc.gc.ca/en/firearms/2019-commissioner-firearms-report#a6>. Online August 9, 2021.

NWEST provides operational support including assistance with firearms identification, the preparation and execution of search warrants, production orders and prohibition orders. NWEST also provides expert advice to law enforcement agencies and crown attorneys, and provides training to frontline law enforcement agencies across the country on firearms law and its application.<sup>162</sup>

Canadian National Firearms Tracing Centre (CNFTC): The centre assists national and international agencies in tracing the origin and history of firearms.<sup>163</sup>

**Specialized Firearms Support Services (SFSS):** This unit has expertise in the identification and description of firearms. It maintains the Firearms Reference Table, which is its primary support to policing. This database is used by police agencies in the identification and description of firearms.<sup>164</sup>

**Firearms Internet Investigations Support Unit (FIISU):** Working with local, national, and international policing agencies, as well as the provincial Chief Firearms Officers, the unit conducts open-source internet investigations regarding on going investigations, as well as licensing and possession eligibility issues.<sup>165</sup>

**Canadian Police College:** The Canadian Police College provides advanced and specialized training and executive development to police officers from all jurisdictions to help them combat crime and increase Canadians' safety since 1976.

Through its highly trained staff and subject-matter experts, the college offers over 50 advanced and specialized courses and workshops. The college has programs in:

- technological crime
- forensic identification
- explosives disposal/investigations
- police executive development
- professional development for Indigenous policing

The college continually develops new courses based on needs and trends. It is one of the few permanent Canadian learning institutions that bring police officers face-to-face from across Canada and around the world. Participants have an opportunity to share best practices,

---

<sup>162</sup> Ibid.

<sup>163</sup> Ibid.

<sup>164</sup> Ibid.

<sup>165</sup> Ibid.

network and develop mentoring and working relationships with police officers from many jurisdictions. The college is a national police service of the RCMP.<sup>166</sup>

#### **Canadian Anti-Fraud Centre**

The Canadian Anti-Fraud Centre collects information on fraud and identity theft, providing information on past and current scams affecting Canadians.<sup>167</sup>

#### **Canadian Police Information Centre**

CPIC is a national repository of police information that amounts to a vital shared resource within Canadian law enforcement.<sup>168</sup>

#### **Forensic Science and Identification Services (FS&IS)**

Forensic Science and Identification Services (FS&IS) is an integral part of National Police Services, with a mandate to provide quality investigative support services for frontline policing. FS&IS provides a wide range of forensic programs and services to clients in Canada and internationally through:

- forensic science services
- crime scene forensic identification
- fingerprint identification and criminal record repositories
- the National DNA Data Bank

FS&IS programs and services form an essential part of virtually every criminal investigation - it assists investigators to solve crime. It strives to be leading edge in developing processes and methods to ensure that the law enforcement community receives quality and timely support in fighting crime.<sup>169</sup>

#### **Violent Crime Linkage and Analysis System**

The Violent Crime Linkage and Analysis System (ViCLAS) help investigators identify serial crimes and criminals. It focuses on the linkages that exist among crimes committed by the same offender.<sup>170</sup>

<sup>166</sup> Canada. Canadian Police College. <https://www.cpc-ccp.gc.ca/about-apropos/about-apropos-eng.htm>. Online 12 Aug 21.

<sup>170</sup> RCMP. Violence Crime Linkage Analysis System. <https://www.rcmp-grc.gc.ca/en/violent-crime-linkage-analysis-system>. Online 4 Aug 21.

### The National Sex Offender Registry

The National Sex Offender Registry (NSOR) is a national registration system for sex offenders convicted of designated sex offences and ordered by the courts to report annually to police.

The registry helps police prevent and investigate crimes of a sexual nature by providing:

- up-to-date information relating to convicted sex offenders
- an instant list of sex offenders who are registered and living within a particular geographic area<sup>171</sup>

The High-Risk Child Sex Offender Program deals with identifying and monitoring high-risk child sex offenders and investigations on transnational child sex offenders.<sup>172</sup>

### The National Cybercrime Coordination Unit (NC3)

Cybercrime investigations are complex and technical in nature. They require specialized investigative skills. Including RCMP officers and civilians from many backgrounds, the NC3 works with law enforcement and other partners to help reduce the threat, impact and victimization of cybercrime in Canada. As a National Police Service, the NC3 serves all Canadian police agencies.<sup>173</sup>

## Other Partner Agencies

**Canadian Border Services Agency (CBSA)** is federal government agency under Public Safety Canada and,

...is responsible for providing integrated border services that support national security and public safety priorities and facilitate the free flow of persons and goods, including animals and plants, that meet all requirements under the program legislation.<sup>174</sup>

CBSA is part of the Public Safety Canada's Public Safety Portfolio along with the Canadian Security Intelligence Service, Correctional Services Canada, Parole Board of Canada, and the RCMP. The agency is an active member of Criminal Intelligence Service Nova Scotia having entered into an MOU in 2019 with the RCMP for the placement of a CBSA Intelligence Analyst into a position with CISNS.<sup>175</sup>

<sup>175</sup> RCMP, CBSA, CISNS. Memorandum of Understanding, 2019. (GOC00033801\_0001)

**Canadian Armed Forces (CAF)** resources may be accessed in emergencies through the provincial Emergency Management Office (EMO). The Minister for EMO (Municipal Affairs in this case) would make a request for civil assistance to the federal Minister of Public Safety. In the case of a request for assistance by a police agency, the Minister of Justice would send a request to the federal Minister of Public Safety.<sup>176</sup>

**Financial Transactions and Reports Analysis Centre of Canada (FINTRAC)** is Canada's financial intelligence unit (FIU). The Centre assists in the detection, prevention and deterrence of money laundering and the financing of terrorist activities. FINTRAC's financial intelligence and compliance functions are a unique contribution to the safety of Canadians and the protection of the integrity of Canada's financial system. FINTRAC acts at arm's length and is independent from the police services, law enforcement agencies and other entities to which it is authorized to disclose financial intelligence. It reports to the Minister of Finance, who is in turn accountable to Parliament for the activities of the Centre.<sup>177</sup>

## The Role of the Provincial Government

### NS Department of Justice

Under the *Police Act* (NS) the Minister of Justice has wide-ranging responsibilities with respect to policing. The Public Safety and Security division of DOJ is responsible for several activities associated with overseeing and supporting the delivery of policing in the province<sup>178</sup>, such as:

- developing policing standards, and ensuring that policing services are delivered efficiently and effectively,
- providing regular audits, inspections, and reviews for municipal police agencies to ensure policing standards are being met,
- managing contracts for the Royal Canadian Mounted Police and First Nations Policing,
- providing community-based crime prevention initiatives, and
- coordinating in-service training initiatives for police and public safety enforcement agencies.

### Policing Standards

The policing standards are published on the NS Department of Justice website with the caveat that they are under review.

The standards provide a guide for agencies in a number of different service areas, providing direction primarily with respect to policies and directives that must be in place regarding the

<sup>176</sup> J. Waugh, NSDOJ. Email of 8 Sept 21.

<sup>177</sup> Canada. <https://www.fintrac-canafe.gc.ca/intro-eng>. Online 19 Aug 21.

<sup>178</sup> Nova Scotia. Policing Services in Nova Scotia, [https://novascotia.ca/just/Policing\\_Services/](https://novascotia.ca/just/Policing_Services/). Online 22 July 21.

particular service. The policing standard documents referred to below are undated, and include the following<sup>179</sup>:

**Police Role and Responsibilities:** the basic role and authority of the police, limits of authority, and use of force.

**Jurisdiction and Centralized Services:** the geographical boundaries of the jurisdiction, concurrent jurisdiction, and temporary assistance to other police agencies. Use of provincial radio system, national fingerprint records system, Canadian Police Information Centre, and Uniform Crime Reporting.

**Contractual Agreements for Police Services:** contracts for law enforcement services to other communities.

**Liaison with Other Agencies:** establishing and maintaining effective liaisons with other public service and criminal justice agencies.

**Organization:** the application of organizational principles such as the description of the department's organizational structure, statement of responsibilities or organizational components, unity of command, and command protocols.

**Direction:** the designation of command during the absence of the Chief of Police, and the accountability of supervisors.

**Administrative Reporting:** management information systems related to statistical data and administrative reporting.

**Planning and Research:** staffing and activities related to planning and research.

**Crime Analysis:** the analysis of crime data at both the strategic and tactical level, and the communication of the analysis internally and externally.

**Personnel Allocation:** the establishment, allocation, and distribution of personnel, including the use of auxiliary police officers and civilian employees.

**Financial Management:** budgeting, accounting, and financial control.

**Job Classification and Description:** job task analysis, classification, and delineation of duties and responsibilities.

---

<sup>179</sup>Nova Scotia. Policing Standards in Nova Scotia, [https://novascotia.ca/just/Policing\\_Services/standards.asp](https://novascotia.ca/just/Policing_Services/standards.asp). Online, 3 Oct 21.

**Compensation, Benefits, and Health and Fitness:** salary compensation, benefits, administrative leave, health insurance, liability protection, educational benefits, health and physical fitness.

**Career Development and Education:** the requirement for career development at all levels of an agency in order to promote productive, efficient, and effective job performance, and to improve the overall level of job satisfaction.

**Disciplinary and Remedial Procedures:** reflecting a systems approach to discipline, this standard addresses disciplinary procedures including a code of conduct and appearance, recognition of commendable performance, training and counselling as remedial measures, and the role of supervisors.

**Recruitment:** the recruitment of police personnel including administrative practices and procedures, community outreach, job announcements and publicity, and the application process.

**Selection:** the selection of police personnel, including the professional and legal requirements, administrative practices, background investigations, detection of deception, interviews, occupational qualifications, and probationary procedures.

**Training:** the training of police personnel, including organization and administration, recruit training; in-service training, roll-call training, and advanced training; specialized training, and civilian training.

**Promotion:** designed to improve the validity and fairness of the promotional process, this standard addresses professional and legal requirements, administrative practices, and assessment centres.

**Performance Evaluation:** related to the evaluation of employee job performance, this standard addresses the principles of performance evaluation and the manner in which it should be conducted.

**Internal Audit:** this standard addresses the audit function within an agency, including the conduct of self-administered audits and the facilitation of audits by the provincial government.

**Patrol:** this standard addresses patrol as the basic function through which police officers engage with the community. It includes organization and administration, and the conduct of operations.

**Criminal Investigation:** addressing the criminal investigation function undertaken by patrol officers and those in specialized investigative units, this standard provides organizational and administrative guidance, as well as operational guidelines.

**Organized Crime and Vice Control:** this standard addresses the agency's need to identify and address criminal activity related to organized crime and vice offences.

**Young Offenders:** this standard addresses the procedures for dealing with young offenders.

**Crime Prevention:** this standard is related to the prevention and suppression of crime, and encourages the establishment of departmental policies, goals, and objective in that regard.

**Unusual Occurrences:** addressing circumstances of an emergent nature, whether natural or intentional, this standard includes establishing responsibility for planning and response to such events.

**Tactical Operations:** this standard is related to police operations including the use of an emergency response team, hostage negotiation, use of tactical vehicles, decoy and undercover operations, bomb disposal, coverage of tactical events, VIP protection, response to disasters, riot control, and civil defense.

**Criminal Intelligence:** this standard concerns the conduct of police agencies in the gathering, processing, and disseminating information regarding criminal activity.

**Internal Investigations:** the conduct of investigations into allegations of misconduct made against police officers is the focus of this standard.

**Community Relations:** this standard addresses the functions of providing information to the public about matters related to crime and policing, as well as the assessment of the attitudes and opinions of the public regarding the police agency's performance.

**Traffic Administration, Traffic Law Enforcement, Traffic Accident Investigation, Traffic Direction and Control, Traffic Engineering, and Traffic Ancillary Services:** this group of standards is related to the agency's overall responsibility to address traffic safety, education, accident investigation, and enforcement of laws with respect to vehicle operations.

**Prisoner Transportation:** this standard is related to the appropriate and safe transportation of persons in police custody.

**Detention Facility:** this standard related to the operation of short-term detention facilities by police agencies, and includes the management, conditions for prisoners, safety and sanitation, security and control, the processing of prisoners, medical and health care services, prisoner rights, and supervision of prisoners.

**Communications:** this standard is related to an agency's ability to communicate information both internally with police officers and staff, and externally with the public, by telephone, radio, and other automated means.

**Records:** this standard is related to an agency's central records system, and includes establishing the responsibility for the review, maintenance, and control of incident reports.

**Evidence:** this standard addresses the processing of evidence at scenes of crime.

**Property Management:** while this standard appears on the list of Policing Standards on the Department of Justice web site, there is no description of its content.

Updated Police Governance Standards<sup>180</sup> are available on the NS Department of Justice website, and include the following:

**Canine Unit:** this standard addresses the deployment of canine units, as well as the selection of police dogs and dog masters, training, testing, and reporting procedures for incidents. (2007)

**Conducted Energy Weapons:** this guideline document refers to the use of conducted energy weapons (CEW) by police and other authorized agencies, and includes direction regarding policy, operational deployment, person with mental illness, training and re-certification, the reporting of the use of CEWs, testing of CEWs, and standard operating procedures. (2011)

**Emergency Management Operations:** this standard addresses the requirement that an agency have policy and procedures to address the planning and response to emergencies. (2007)

**Exhibit, Seized or Found Property Management:** this standard addresses the maintenance of records and procedures related to exhibits, as well as seized and found property. (2006)

**Firearms:** this standard addresses policies and procedures related to the administration, training, and use of police issued firearms. (2006)

**Jurisdiction and Mutual Aid/Contractual Agreements:** this standard addresses agency jurisdictions and boundaries, providing assistance to other agencies, requesting assistance from other agencies, responsibilities related concurrent jurisdictions, and contractual agreements regarding the provision of services. (2007)

**Impact Weapon (Baton):** this standard addresses policies and procedures related to the administration, training, and use of the police issued impact weapon (baton). (2006)

**Liaison with Other Agencies:** this standard requires that agencies have policy and procedures requiring liaison protocols with justice system partners and other agencies. (2007)

**Oleoresin Capsicum:** this standard addresses policies and procedures related to the administration, training, and use of police issued oleoresin capsicum (pepper spray). (2006)

**Organizational Structure:** this standard addresses the requirement that agencies describe their organizational structure. (2007)

**Police Notebooks:** this standard addresses the administration and use of police notebooks. (2007)

**Police Role and Responsibilities:** this standard addresses the requirement that agencies have a system for the issuance, maintenance, updating, and distribution of policies and directives. (2007)

**Training Certification and Validation of Training:** this standard addresses the maintenance of training records. (2006)

**Violent Crime Linkage Analysis System (ViCLAS):** this standard addresses the submission of ViCLAS booklets. (2007)

**Expedited Court Appearance for Young Offenders:** this standard addressed the policy and procedures requirement to meet a recommendation of the Nunn Commission (2006), and relates to the timely appearance of young persons in Youth Court. (2007)

As an example, the Patrol standard<sup>181</sup> provides a glimpse into the provincial government's role in setting clear guidelines for police agencies. Such standards, together with the audit role, support police agencies and ensure uniform services across communities policed by different agencies.

The following excerpt from the Patrol standard gives a sense of the guidance set out for agencies.

### **22.2 Operations**

*22.2. 1 A written directive establishes the categories of crimes and incidents that should receive preliminary investigation by patrol officers.*

*Comments: The single most important determinant in solving a crime is the information supplied by the victim or witnesses to the immediately responding patrol officer. In general, patrol officers should conduct the preliminary investigation of most cases. In unusually serious or complex crimes, the preliminary investigation may be conducted by specialists.*

<sup>181</sup> Nova Scotia. Policing Standards in Nova Scotia: Patrol.  
[https://novascotia.ca/just/Policing\\_Services/standards/Patrol.pdf](https://novascotia.ca/just/Policing_Services/standards/Patrol.pdf). 31 July 21.

MCC

Structure of Policing in Nova Scotia

MacKnight

*Investigation of certain other crimes may require the presence of Investigators In plain clothes during the initial investigation. The circumstances calling for early involvement of specialists should be clearly described by the department.*

22.2.2 A written directive governs the conduct of follow-up Investigations by patrol officers.

*Comments: The purpose of this standard is to increase the effectiveness of patrol officers, to enhance their role, and to provide specialized investigators more time to concentrate on complex investigations. The directive should clearly specify which kinds of cases are referred to specialized Investigative components.*

#### Policing Standard Audits

While Chiefs of Police have a legislated responsibility to “conduct self audit and quality assurance programs”<sup>182</sup> under the *Police Act*, the Minister also has the authority to,

...determine the adequacy and effectiveness of police services provided in a municipality through a system of audits, reviews and inspections and any other means the Minister determines to be appropriate;<sup>183</sup>

The Public Safety and Security division of the NS Department of Justice is responsible for “...regular audits, inspections and reviews for municipal police agencies to ensure improved policing standards are being met.”<sup>184</sup>

The value of the audit process was highlighted in a NS Department of Justice, Public Safety and Security division audit report of sexual assault investigations from 2018, which contained the following statements:

In September 2016, the Honourable Dianne Whalen instructed that staff from Public Safety and Security Division to initiate the reinstatement of the audit process that would see all policing services in the province audited on an ongoing basis.<sup>185</sup>

<sup>182</sup> Nova Scotia. Ministry of Justice. *Police Act*. 2004, c. 31, s. 1. Section 38(4)(e).

<sup>183</sup> Ibid. Section 6(e).

<sup>184</sup> Nova Scotia. DOJ, Policing Services in Nova Scotia, [https://novascotia.ca/just/Policing\\_Services/](https://novascotia.ca/just/Policing_Services/). Online 10 Aug 21.

<sup>185</sup> Nova Scotia Dept of Justice. (2018). Sexual Assault Investigation Audit Update. Nova Scotia. (MCC00000168).

Police welcomed the audits and were pleased with the audit process being brought into place again. They feel that audits benefit their agencies and give them the opportunity to make positive changes, if required.<sup>186</sup>

There were eleven audit reports disclosed by the NS Department of Justice. They included a 2018 Sexual Assault Investigation Audit Update completed by the Policing Services Section of the Public Safety and Security Division of NS DOJ. The report included audits of nine municipal police agencies and four RCMP detachments.

The other ten audit reports were also completed by the Policing Services Section of the Public Safety and Security Division of NS DOJ and were in relation to Domestic Violence Investigations conducted by each of the ten municipal police agencies in Nova Scotia.

The audit reports reviewed for this report did identify gaps in training in some agencies, and while it is somewhat speculative, the list of recent in-service training facilitated by the NS DOJ appears to correspond with the areas of required training identified in the audits.

### Training

The Public Safety and Security division of the NS Department of Justice “coordinates in-service training initiatives for police and public safety enforcement agencies.”<sup>187</sup> Several municipal police agencies engaged in this report provided examples of this type of training being facilitated or mandated by the NS Department of Justice.

The Amherst Police Department<sup>188</sup> provided a list of training courses where the source was the NS Department of Justice or other provincial government department.

- Trauma Informed Interviewing (DOJ)
- African Canadian Experience (DOJ)
- Sexual Assault Investigators (DOJ)
- Auditing for Police Managers (DOJ)
- Child Sexual Assault Course (NS Community Services)
- Mental Health First Aid (NS Mental Health)
- Elder Abuse (Dept of Seniors)
- Incident Command System (EMO)

Halifax Regional Police indicated that the following training is mandated by the NS Department of Justice<sup>189</sup>:

<sup>186</sup> Ibid.

<sup>187</sup> Nova Scotia. DOJ, Policing Services in NS. [https://novascotia.ca/just/Policing\\_Services/](https://novascotia.ca/just/Policing_Services/). Online 10 Aug 21.

<sup>189</sup> Halifax Regional Police. (2020). HRP Annual Block Training Overview. Author.

MCC

Structure of Policing in Nova Scotia

MacKnight

- Firearms training- pistol and carbine.
- Intermediate Weapons- Conducted Energy Weapons, baton, pepper spray.

Bridgewater Police Service indicated that the province requires annual re-certifications for firearms and officer safety.<sup>190</sup>

The Cape Breton Regional Police also stated that there are courses provided by the Department of Justice.<sup>191</sup>

Chief Cecchetto from the Kentville Police Service stated that the NS Department of Justice provides a list of mandatory training each year that includes firearms. Every two years they are required to recertify in Immediate Action Rapid Deployment, conducted energy weapons, empty hand combat, baton, handcuffing, pepper spray, and Lateral Vascular Neck Restraint. Other training from provincial government departments included:

- Domestic Violence, train the trainer & yearly updates (DOJ)
- Drug Recognition Expert (DOJ)
- De-escalation training (DOJ, training by APA)
- Child Sexual Assault training (Community Services)
- Trauma Informed Response to Sexual Assault (Sexual Assault Nurse Examiner)
- Incident Command System (EMO)
- Sexual Assault Investigation (DOJ)
- Quality Assurance of files (DOJ)

#### Contract Management

The mandate of the Public Safety and Security division of the NS Department of Justice also includes the management of the RCMP policing agreement. Provincial government representatives also sit as members of the Contract Management Committee for the Provincial Policing Services Agreements.

#### Department of Municipal Affairs

##### Emergency 911 Service

Nova Scotia's Emergency 911 service is administered through the Emergency Management Office (EMO) under the Department of Municipal Affairs.<sup>192</sup> This responsibility lies with the Minister of Municipal Affairs pursuant to the *Emergency 911 Act*.<sup>193</sup> Emergency calls for police service from the public are routed through a public safety answering point<sup>194</sup> (PSAP), which is

<sup>190</sup> S. Feener, Chief of Police. Email of 23 April 21.

<sup>191</sup> R. Hitchings, Supt, CBRP. Correspondence of 25 May 21.

<sup>192</sup> Nova Scotia. <https://beta.novascotia.ca/government/emergency-management-office>. Online 31 July 2021.

<sup>193</sup> Nova Scotia. Emergency "911" Act. 1992, c. 4, s. 1.

<sup>194</sup> Ibid.

an established centre for receiving such calls and dispatching emergency services. These centres also serve as an essential link with police officers, who in the course of their duties may require certain information, or a connection to other services or service providers. EMO has agreements in place with four agencies that serve as PSAPs for Nova Scotia:

- Cape Breton Regional Municipality,
- Halifax Regional Municipality,
- RCMP Operational Communications Centre (Halifax, formerly Truro), and
- Valley Communications.

EMO has developed 911 Standard Operating Procedures to ensure that the operations of the PSAPs are consistent and efficient.<sup>195</sup>

#### Alert Ready Service

The Alert Ready system is a national network that distributes alerts to Canadians through television, radio, and wireless devices. There are 32 broadcast intrusive alerts concerning incidents that are a threat to life including: fire; natural events such as severe weather; biological threats; a hazardous or explosive substance; environmental threats such as air quality; a terrorist incident/violence or threats of violence by individuals or groups against civilians or infrastructure; civil emergency; and also test alerts may be sent<sup>196</sup>. Examples of alerts specific to policing related incidents are: civil emergencies (riots, demonstrations), criminal activity (terrorism, active shooter), and amber alerts.<sup>197</sup>

In April of 2020, the Nova Scotia EMO, under the Department of Municipal Affairs, had the sole authority to issue alerts based on information that was sent to them from a trusted source such as an emergency services provider.<sup>198</sup> The Nova Scotia EMO is the Authorized Government User of the system in Nova Scotia. EMO is responsible for training users and maintaining an on-call team and process in place to deliver alerts at all times.<sup>199</sup> Once EMO confirms that the requested alert is from a trusted source, and the Director of Operations confirms that an alert is warranted, the Provincial Coordination Centre (PCC) is activated, and a detailed process is followed leading to the issuing of the alert.<sup>200</sup> The PCC is the centralized operations centre during events that require an alert to be issued, and its activation and staffing are a prerequisite to issuing an alert.<sup>201</sup>

## Governance, Oversight, and Accountability

The exercise of authority by the police over the members of a society must be subject to rigorous oversight in order to avoid the abuse of that authority. At the same time, the police must also remain independent from political influence over matters of day-to-day operations such as the conduct of investigations and the enforcement of the law. The following mechanisms will be examined in this section.

**Governance** is the exercising of direct authority over an organization or entity. It is the ability to control and direct the making of policy, as well as directing and influencing decisions made by the organization. It includes the capability to ensure that decisions made by the governing body are carried out in accordance with the governing body's direction (oversight); with recourse to corrective action should this not occur. Governance is the processes and structure used to provide direction to an organization's general operations and activities.<sup>202</sup>

**Oversight** involves ensuring that the legislated functions for the police force are carried out by the organization and the services provided are in accordance with the law and a Code of Professional Conduct.<sup>203</sup>

**Accountability** is the condition of being held to account for a result or an outcome.

### Governance

The *Police Act* sets out provisions for the **civilian governance**<sup>204</sup> and oversight of municipal police agencies and the RCMP in Nova Scotia through Municipal Boards of Police Commissioners and Police Advisory Boards, respectively. Some key aspects of these sections of *the Act* are set out here:

In the case of Municipal Boards of Police Commissioners, the following sections of *the Act* are of particular relevance with certain parts highlighted for emphasis.

**55 (1)** The function of a board is to provide

<sup>202</sup> New Brunswick. Police Governance and Oversight in New Brunswick, 2011. Author.

<sup>203</sup> Ibid.

<sup>204</sup> Nova Scotia. Ministry of Justice. *Police Act*. 2004, c. 31, s. 1. Section 55(1)(a).

(a) **civilian governance** on behalf of the council in relation to the enforcement of law, the maintenance of law and order and the prevention of crime in the municipality; and

(b) the administrative direction, organization and policy required to maintain an adequate, effective and efficient police department,

**but the board shall not exercise jurisdiction relating to**

**(c) complaints, discipline or personnel conduct except in respect of the chief officer of the municipal police department;**

**(d) a specific prosecution or investigation; or**

**(e) the actual day-to-day direction of the police department.**

(3) Without limiting the generality of subsection (1), a board shall

(a) determine, in consultation with the chief officer, priorities, objectives and goals respecting police services in the community;

(b) ensure the chief officer establishes programs and strategies to implement the priorities, objectives and goals respecting police services;

(c) ensure that community needs and values are reflected in policing priorities, objectives, goals, programs and strategies;

(d) ensure that police services are delivered in a manner consistent with community values, needs and expectations;

(e) act as a conduit between the community and the police service providers;

(f) recommend policies, administrative and organizational direction for the effective management of the police department;

(g) review with the chief officer information provided by the chief officer respecting complaints and internal discipline;

(h) ensure a strategic plan and business plan is in place;  
and

(i) ensure the department is managed by the chief officer

according to best practices and operates effectively and efficiently.  
2004, c. 31, s. 55.

In the case of Police Advisory Boards for communities policed by the RCMP, the following sections of *the Act* are of particular relevance with certain parts highlighted for emphasis.

#### Section 68 Functions of Advisory Board

**1) The function of an advisory board is to provide advice to the council in relation to the enforcement of law, the maintenance of law and order and the prevention of crime in the municipality, but the advisory board shall not exercise jurisdiction relating to complaints, discipline, personnel conduct or the internal management of the Royal Canadian Mounted Police.**

**(3)** Without limiting the generality of subsection (1), an advisory board shall, subject to the police contract or policing agreement,

(a) determine, in consultation with the chief officer or the chief officer's designate, **priorities, objectives and goals** respecting police services in the community;

(b) ensure the chief officer establishes programs and strategies to **implement the priorities, objectives and goals** respecting police services;

(c) ensure that community needs and values are reflected in policing priorities, objectives, goals, programs and strategies;

(d) ensure that police services are delivered in a manner consistent with community values, needs and expectations;

(e) act as a conduit between the community and the police department;

(f) recommend policies, administrative and organizational direction for the effective management of the police department; and

(g) review with the chief officer or the chief officer's designate information provided by the chief officer respecting complaints and internal discipline. 2004, c. 31, s. 68.

These sections of the *Police Act* are parts of the legislated mechanisms to provide for governance and oversight of police agencies in Nova Scotia.

### Oversight and Accountability

While oversight and accountability apply to all aspects of policing, they are most often referred to with respect to police misconduct. A primary concern with police officers being held accountable is whether the systems in place to address those complaints can be trusted. The two processes discussed here for the investigation of allegations of police misconduct (one for municipal agencies and one for the RCMP) have the investigation conducted by the subject officer's agency in the first instance.

When it comes to complaints of police misconduct in Nova Scotia there are separate processes for the RCMP and municipal police departments. Complaints regarding the conduct of municipal police officers are dealt with according to the provisions of the *Police Act* and its Regulations, wherein is set out the precise process to be followed in addressing such complaints. While most complaints against on-duty police officers are dealt with in the first instance by the agency for whom the officer is employed, the Office of the Police Complaints Commissioner has an important role as an independent arms-length agency in the investigation and tracking of public complaints against the police. Complainants who are not satisfied with the decision at the agency level regarding a complaint, may appeal the matter to the Police Review Board.

*The Office of the Police Complaints Commissioner (OPCC) investigates complaints by citizens alleging misconduct by municipal police officers. The Office provides support to the Police Review Board which is empowered to hear and rule on public complainant appeals. Police officers may also appeal internal discipline decisions to the Review Board. The OPCC is an arms-length agency that is funded by the Nova Scotia government.<sup>205</sup>*

Public complaints regarding the conduct of RCMP members are dealt with in the first instance by the RCMP. If the complainant is unsatisfied with how the matter was dealt with, they can seek a review by the Civilian Review and Complaints Commission.<sup>206</sup>

The investigation of incidents where a person sustains serious or fatal injuries during an encounter with the police are now investigated in Nova Scotia by the Serious Incident Response

MCC

Structure of Policing in Nova Scotia

MacKnight

Team (SIRT). Deriving its authority from the *Police Act*<sup>207</sup>, SIRT's legislated mandate under section 26A of the *Act* is to,

*...provide oversight of policing by providing independent investigation of serious incidents involving police...*

More specifically, SIRT describes its mission as being,

*To ensure Nova Scotians have the utmost trust and confidence in the investigation of serious incidents involving police.*<sup>208</sup>

Its mandate is,

...to investigate all matters that involve death, serious injury, sexual assault and domestic violence or other matters of significant public interest that may have arisen from the actions of any police officer in Nova Scotia.<sup>209</sup>

The structure of SIRT is designed to insulate the decision making in such cases from any perception that the police agency of the subject officer may have influence. Significant aspects of the structure and process of SIRT are,

- The director cannot be a current or former police officer in any jurisdiction.<sup>210</sup>
- The SIRT investigators are former police officers and seconded police officers from Nova Scotia agencies who report to the civilian director.<sup>211</sup>
- No SIRT investigator can lead any investigation into the conduct of an officer from the investigators former/current agency.<sup>212</sup>

## Overview of the Provincial Police Service Agreement (PPSA)

This overview of the PPSA is taken directly from the **2012 RCMP Provincial and Territorial Police Service Agreements Companion Document, 2014**, as prepared by the Contract Management Committee (CMC)<sup>213</sup>.

Parts of, or the entirety, of the PPSA articles deemed most relevant to this report by the author, as interpreted in the Companion Document, are presented in this section.

NOTE: An asterisk (\*) after the article number indicates an overview rather than the entire article. Parts of the PPSA that are specific to other provinces are not included in this section. All text highlighted in blue is a direct quote from the Companion Document. The abbreviation “PT” in any context in the Companion Document means Provincial or Territorial.

### Article 2\*: Purpose and Scope

**PURPOSE:** Article 2 outlines the roles and responsibilities of Canada with respect to the Service<sup>214</sup>. It also describes the role and duties of Members who form the Service. In addition, it contains provisions regarding non-police duties, as well as a provision for the Service to provide temporary assistance or special expertise to other police agencies.

**BACKGROUND:** The “administration of justice” has been interpreted by all levels of government to include law enforcement. The PT is responsible for law enforcement, but may contract with the federal government to utilize the RCMP as its police service. See the Preamble in the Companion Document for more information.

#### INTERPRETATION

#### PROVISION OF PROVINCIAL OR TERRITORIAL POLICE SERVICE AND ANNEX “A”

This section states that Canada will provide and maintain a Service for the PT in accordance with the Agreement. Canada is authorized by the PT to carry out the “powers and duties” required to provide the Service.

Annex “A” of each Agreement sets out the number of authorized positions for Members and Support Staff for the Service and for divisional/regional administration. The definition of Member is found in Article 1 and includes regular members, special constables, special

<sup>213</sup> Contract Management Committee. 2012 RCMP Provincial and Territorial Police Service Agreements Companion Document, 2014. Version 1.1, September 2017. Author. See Annex B.

<sup>214</sup> In the Companion Document, the term Service refers to the Provincial or Territorial Police Service. It does not include RCMP Municipal Police Services.

constable members and civilian members. Support Staff is also a term defined in Article 1. See Article 5 for more information on Annex “A”.

In the future, the category “civilian member” may be eliminated. Bill C-42 *Enhancing RCMP Accountability Act* received royal assent on June 19, 2013, allowing civilian members to be converted into another category of employee.

#### DUTIES OF MEMBERS WHO FORM THE PROVINCIAL/TERRITORIAL POLICE SERVICE

The Article outlines the duties of the Members in the Service; these duties originate from the *RCMP Act*. Members of the Service will perform the duties of peace officers and provide services to:

- preserve peace;
- protect life and property;
- prevent crime and offences against the laws of Canada and the laws in force in the province or territory (including municipal and Band by-laws which are enforcement related);
- apprehend criminals, offenders and others who may be lawfully taken into custody; and
- execute all warrants and perform all related duties and services that may be executed and performed by peace officers under the laws of Canada or the laws in force in the province or territory.

#### NON-POLICE DUTIES – MEMBERS OF THE SERVICE ARE NOT REQUIRED TO PERFORM CERTAIN DUTIES

Members of the Service are not required to perform duties or services that are inconsistent with the effective and efficient delivery of police services. However, if the Service is performing non-police duties when the 2012 Agreements come into effect, the Service will continue to perform these duties until the parties agree these duties and/or services will be performed by a third party .

The PT Minister<sup>215</sup> and the Commissioner will identify and discuss these duties and, if feasible, the PT will exercise its best efforts to implement an alternative service delivery mechanism, thereby removing this responsibility from the duties of the Service.

Article 4 does not need to be invoked if non-police duties are being removed from the responsibility of the Service, as Article 4 relates to police duties and functions.

<sup>215</sup> In the context of the Nova Scotia agreement the PT Minister refers to the Minister of Justice.

#### TEMPORARY ASSISTANCE OF PROVINCIAL/TERRITORIAL POLICE SERVICE TO OTHER POLICE AGENCIES/SERVICES

The PT Minister, in consultation with the CO, has the authority to direct the Service to provide assistance or special expertise on a temporary basis to other police agencies/services in the province or territory. It is recommended that PTs and their respective RCMP divisions meet to discuss divisional temporary assistance policies (including cost recovery), procedures (including procedures for level of consultation with PT Minister i.e. delegation)

#### Article 3: Term of Agreement

**PURPOSE:** Each Agreement is in effect for 20 years, however, the parties retain the flexibility to terminate the Agreement before the expiry of the 20-year term, provided they give two years' notice. This Article also allows the parties to extend or renew the Agreement.

**BACKGROUND:** The 20-year term of the Agreements provides stability for contract police services and enables long-term infrastructure investments.

#### INTERPRETATION

Term: April 1, 2012 to March 31, 2032.

Extension or Renewal: The Agreement may be renewed or extended for an additional period of time subject to terms mutually agreed upon by the parties. A renewal process will be determined closer to the end of the 2012 Agreement.

Termination: Either Party may terminate the Agreement on March 31 of any year, as long as the Party has provided a minimum of two years notice.

Transitioning out of an Agreement: The parties agree to work together from the time notice is provided to the date of termination to ensure a smooth transition to a non-RCMP provincial or territorial police service. The alternate police service must be authorized by the province or territory to act as the provincial or territorial police service. Both parties recognize that consideration must be given to maintaining an adequate and effective level of policing during the transition phase.

The transition period also includes the lead up to the decision by a P/T/ municipality to transition. During this time, Public Safety Canada and the RCMP will work collaboratively with the P/T or municipality in providing information to assist the jurisdiction in conducting their analysis.

The transition to a non-RCMP policing arrangement will require close collaboration between the parties. As set out in Article 26 (Survival), planning for the transition to a non-RCMP police

force will ensure the obligations and rights set out in Article 11 (Basis of Calculation of Payment); Article 12 (Accommodations Program); Article 15 (Transfer of Ownership of Equipment); Article 17 (Method of Payment); Article 24 (Notice); and Article 25 (Amendment) are fulfilled.

**ADMINISTRATION-** With the assistance of Public Safety Canada, the RCMP will work collaboratively with provinces, territories and/or municipalities in providing information related to RCMP services to assist the jurisdictions efforts to explore alternative police service delivery. This includes, but is not limited to, providing requested, unbiased, pertinent information to support evidence based decision making.

#### Article 4\*: Inclusions and Exclusions

**PURPOSE:** The purpose of Article 4 is to provide clarity on the geographic areas the PT Police Service is responsible for policing and to officially document any changes to these geographic areas over the 20-year term of the Agreement. The purpose of recording duties or functions is to clearly identify and officially document any duties or functions removed from, or added to, the Service over the term of the Agreement.

**BACKGROUND:** The Article on exclusion and inclusion is essentially similar to, and a continuation of, past practices in effect under the 1992 Agreement. It supports the evolving role of policing and provides the flexibility and adaptability to maintain an efficient and effective Service by providing the ability to consider new duties and functions in a geographic area as well as the use of alternative means to deliver functions that have traditionally been delivered by the Service. Only police related duties can be added to the current duties and functions of the Service. Article 4 does not need to be invoked if non-police duties are being removed from the responsibility of the Service.

The delineation of geographic areas does not limit the PT's authority to administer justice throughout the province or territory. It does not impact the PT's authority to enforce laws, pursue effective policing programs, or share services across geographic boundaries. For example, a provincial dog team or emergency response team may provide services in a municipal jurisdiction that is not included in the geographic area of the PT Police Service.

Similarly, in some provinces, the Provincial Police Service and the various RCMP Municipal Police Services operate in an integrated manner which means that they may be co-located in one Detachment, under the command of one Detachment Commander, and leverage resources between services to best address law enforcement and public safety in that specific Detachment's jurisdiction. This allows for cross-functionality and maximizes resource deployment between RCMP Provincial and Municipal Services.

**INTERPRETATION:** The PT Minister will give notice in writing (pursuant to Article 24) to the Federal Minister that the PT wishes to include or exclude a geographic area, or a function within a geographic area, from the responsibility of the Service. The proposed inclusion or exclusion should not unreasonably affect Canada's ability to provide contract policing services to the PT.

**Inclusions:** An inclusion means the PT Police Service becomes responsible for policing a geographic area, or for providing a specific policing duty or function within a geographic area.

The mutual agreement of the Federal and PT Ministers is required for the inclusion of a geographic area, or duty or function within a geographic area, to take effect.

An example of an inclusion of geographic areas occurred in New Brunswick. Between 1992 and 2002, the geographic areas policed by 15 small independent police services in New Brunswick were absorbed by the RCMP Provincial Police Service. This was possible because each Municipality had a population of less than 5,000 and therefore qualified for policing under the Provincial Police Service. For each Municipality, the Provincial Minister wrote to the Federal Minister requesting a geographic inclusion so that the geographic area within the municipal boundary was added to the Service's jurisdiction. Under Article 5, the authorized strength of the Service was also increased with each inclusion by the number of Members required to police that Municipality.

**Exclusions:** An exclusion means the PT Police Service will no longer be responsible for policing a specific geographic area of the province or territory, or for providing a certain function or duty within a specific geographic area.

An exclusion of a geographic area, or function within a geographic area, will take effect as soon as practicable, but no later than one year after the Federal Minister receives written notice from the PT Minister. This time period will allow the contract parties to work cooperatively through a transition process.

Under this Article, neither Canada nor a PT can add to, or remove from, the duties or functions of the Service as they were on March 31, 2012 (one day before the 2012 Agreements came into effect), without prior consultation and agreement between the Federal and PT Ministers. See Article 2 for more information on police duties. For a geographic exclusion, mutual agreement is not required; in all cases, the PT Minister will provide notice in writing pursuant to Article 24.

An example occurred in 1983 when Newfoundland and Labrador excluded the geographic areas of the greater metropolitan area of St. John's, Mount Pearl, Corner Brook, Labrador West and Churchill Falls from the responsibility of the Service. Responsibility for these geographic areas was transferred to the Royal Newfoundland Constabulary.

An example occurred in 1984 when New Brunswick excluded highway patrol from the duties of the PT Service. The province created a new highway patrol unit to provide traffic services on the highways. (This exclusion was later reversed.)

#### Article 5\*: Increase or Reduction in the Provincial Police Service & Regional or Divisional Administration Staff

**PURPOSE:** Article 5 describes how provinces and territories can increase or decrease the number of Members and Support Staff in their PT Police Service. It also describes the consultation process to increase or decrease the number of staff working in divisional and/or regional administration functions.

**BACKGROUND:** While Article 5 describes the processes for increasing or decreasing positions, Annex “A” (a schedule to the Agreements) is the official record of the number of Member and Support Staff positions for the Service and divisional/regional administration. Information about the composition of the Service, such as how the Service is organized, positions by rank and function, number of vacancies, etc. is covered in Article 8.

The number of positions noted in Annex “A” is also known as “authorized strength”. Authorized strength is the benchmark information used by the province or territory when reporting to the public, or Treasury Boards, on the size of the Service and/or divisional/regional administration. Of note, authorized strength is not the figure used for billing under the Agreement; instead, FTE Utilization, as defined under Article 1, is utilized.

PT involvement in decisions that impact the authorized strength of divisional/regional administration positions is new to the 2012 Agreements. In keeping with the increased accountability and transparency provisions under the Agreements, the RCMP will consult with, and seek the support of, the PT regarding changes to the number of divisional/regional administration positions.

As personnel related costs constitute the most significant expenditure in the policing budget, ensuring that funds are available is a key consideration in the decision to seek additional personnel. Ensuring that the federal share of contract policing funds each year is sufficient to cover any changes in personnel requirements depends, in part, on accurately forecasting these requirements across all contract jurisdictions. The RCMP undertakes a comprehensive planning process for its annual Treasury Board submission (the Annual Reference Level Update, or ARLU). As part of this process, the RCMP analyzes planned growth, attrition rates, restructuring initiatives, transfers, etc., over all business lines in order to forecast the total number of personnel required across the RCMP. Accurately forecasting changes in personnel, including any anticipated growth in contract policing jurisdictions, is an integral part of this exercise, so it

is important that contract jurisdictions consider their anticipated resource requirements during the multi-year planning cycles under Article 18.

#### INTERPRETATION

##### INCREASE OR DECREASE IN ANNEX “A” FOR THE PROVINCIAL OR TERRITORIAL POLICE SERVICE

Pursuant to the Agreement, the PT has the responsibility to establish the number of resources in their PT Police Service. This Article stipulates the process leading to an adjustment to the size of the Service.

If a PT wants to increase or decrease the size of their Service, the PT Minister will write a letter to the Federal Minister requesting an increase or decrease to the Annex “A” authorized strength.

**Increases:** A request for an increase must include confirmation of the financial commitment from the PT Minister. The Federal Minister’s approval is provided in writing and these two letters, the request and the response, constitute a formal adjustment to Annex “A”. The RCMP will fill the number of positions specified in the request as soon as possible, but within one year of its receipt.

**Decreases:** Similarly, the PT Minister’s request to decrease the size of the Service and the Federal Minister’s written approval constitute a formal adjustment to Annex “A”. The RCMP will reduce the number of positions specified in the request as soon as possible, but within one year of its request. However, the Federal Minister may refuse a request to reduce the number of positions assigned to the Service if that reduction would lower the level of resources below the threshold needed to deliver effective and efficient policing, or to maintain public or officer safety. In this case, the Federal Minister’s written reply to the PT Minister would provide the reasons for refusing the reduction.

Annex “B” is the schedule of the Agreements containing the template letters to be used by the PT Minister to request an adjustment to the authorized strength, or Annex “A”, of the Service.

##### INCREASE OR DECREASE IN ANNEX “A” FOR DIVISIONAL AND REGIONAL ADMINISTRATION

The PT Minister will be consulted by the RCMP before any changes are made to the number of divisional/regional administration staff. This consultation occurs as part of the budgetary planning process for the Service under Article 18 (see divisional multi-year financial planning timeline at the end of Article 18, CoDo pg. 210), whereby the RCMP provides the PT Minister with the multi-year report (the Report) that includes any proposed increase or decrease to divisional/regional administration staff, a description of any financial implications, as well as an explanation of any deviation from the previous year’s Report. At the onset of each fiscal year,

divisions and PTs will engage in the divisional planning process as outlined in the multi-year financial plan timeline.

For any proposed increase or decrease to the number of divisional/regional administration staff, the RCMP will seek the support from the PT. However, an increase to the number of divisional/regional administration staff may proceed without the PT Minister's approval if the Federal Minister provides written reasons stating the Service cannot be adequately supported without more staff.

#### Article 6\*: Management of the Provincial or Territorial Police Service

**PURPOSE:** Article 6 describes the specific responsibilities of each contract party in the management of the Service. It also addresses the harmonization of policing standards and procedures.

**BACKGROUND:** The provinces and territories recognize that the RCMP is more than a Provincial or Territorial Police Service and, unlike independent police services, the RCMP is a federal agency subject to all federal legislation. The RCMP, as the PT Police Service, delivers services according to the strategic policing direction of the contract jurisdiction. The PT Minister focuses on the vision for policing in the province or territory through the establishment of priorities and objectives (see Article 7 for more information). At the same time, as a national police force, the RCMP must maintain cohesive internal management of its policies, standards and procedures. The CO is also responsible for everyday policing decisions related to operational matters. The Authorities section of the Preamble provides more information on the roles and responsibilities of the contract parties.

The PTs are responsible for establishing professional police standards and procedures for policing in their jurisdiction. Similarly, the Commissioner is responsible for setting standards and procedures for the RCMP as a police force.

As Canada's National Police Force, the RCMP is managed, to the extent possible, in a manner that ensures consistent national professional standards in order to enhance Members' deployability across the country. To assist the RCMP in maintaining consistent standards in all contract jurisdictions, Canada and the PT may identify opportunities for improving consistency between PT and national RCMP standards, where it is feasible and appropriate to do so.

#### INTERPRETATION

**SETTING OBJECTIVES, PRIORITIES AND GOALS:** The PT Minister sets the objectives, priorities and goals of the Service in line with PT policing priorities. These are based on local needs, the evolving nature of crime and the specific requirements of policing in that jurisdiction.

**INTERNAL MANAGEMENT OF THE SERVICE:** The Commissioner, under the strategic direction of the Federal Minister, is responsible for the internal management of the RCMP. This includes the overall administration of the Service, as well as determining and applying professional police standards and procedures.

**LEVEL OF POLICING:** The PT Minister, in consultation with the Commissioner, has the responsibility to establish the level of policing service. The concept of “level of policing” is broader than the number of personnel in the Service. It refers to the resources required to ensure efficient and effective policing, to maintain public and police safety, and to meet the goals and objectives of the Service.

**RESPONSIBILITY FOR THE ADMINISTRATION OF JUSTICE:** The PTs are responsible for the administration of justice and law enforcement within their jurisdiction. This responsibility is not limited by the RCMP’s internal management of the Service or any other provision of the Agreements.

**HARMONIZATION OF STANDARDS AND PROCEDURES:** There are two components to the harmonization of standards and procedures under the Agreement. The first is that the PT recognizes Canada’s interest in the harmonization of policing standards and procedures *nationally across the RCMP* based on best practices. Canada and the PT will identify opportunities for improving consistency between PT and national RCMP standards, where it is feasible and appropriate to do so.

The second component is that the RCMP recognizes the PT’s interest in harmonizing policing standards and procedures *across police services within their contract jurisdiction* based on best practices. The Commissioner agrees to facilitate this consistency by meeting or exceeding the police standards set by the PT, unless doing so would contradict the law, negatively affect the RCMP’s ability to deliver effective and efficient police services, or negatively affect public or officer safety.

If a PT is developing new standards or procedures, or consulting on existing standards or procedures, the following process will be utilized:

- the PT Minister will consult with the Commissioner;
- the Commissioner will ensure the standards and procedures for the Service meet or exceed those set by the PT, unless doing so would contradict the law, negatively affect the RCMP’s ability to deliver effective and efficient police services, or negatively affect public or officer safety; and
- the Commissioner will consult with the PT Minister if the standards or procedures proposed by the PT Minister are of concern. If the issue of concern is not resolved

during consultation, upon request from the PT Minister, the Commissioner will provide written reasons for his or her opinion.

Any issues that are not resolved in consultation between the contract parties can be addressed through the Dispute resolution process as set out in Article 23.

#### Article 7\*: The Commanding Officer (CO) and the Operation of the Division

**PURPOSE:** Article 7 establishes the PT Minister's authority to provide direction to the CO in aiding the administration of justice in the province or territory. It ensures the provincial/territorial control over the administration of justice. It also establishes the CO's responsibility to implement the objectives, priorities and goals for the Service and consult regularly with the PT Minister on the operation of the Division. The Article also includes a consultation process for the selection of key positions in the Division.

**BACKGROUND:** The PT Minister has paramount authority over policing as part of the administration of justice, and establishes the priorities and objectives for the Service, while the CO is responsible for operational matters.

The consultation with respect to the appointment and replacement of key positions in the Division has been expanded from the 1992 Agreement to include the positions of Detachment Commanders and to allow for community consultation.

#### INTERPRETATION

**UNDER DIRECTION OF PROVINCIAL/TERRITORIAL MINISTER:** For the purposes of the implementing the Agreement, the CO acts under the direction of the PT Minister to aid in the administration of justice and carrying into effect the laws in force within Canada and the province or territory.

**CONSULTATION AND REPORTING:** The PT Minister needs information to make informed decisions and provide direction. The CO is required to engage and consult with the PT Minister by:

- implementing the objectives, priorities and goals established by the PT Minister, and ensuring the deployment of personnel and Equipment reflects these priorities to the extent possible;
- consulting regularly with the PT Minister and reporting on the operational and administrative status of the Service, as and when required, but at a minimum on a quarterly basis;
- ensuring reporting requirements are met in accordance with Article 18;

- providing an annual report, in a mutually agreeable format, to the PT Minister by July 1, outlining the extent to which the priorities, objectives and goals for the Service were implemented and achieved for the previous Fiscal Year;
- supplying the PT Minister or Attorney General with any information that comes into the possession of any Member of the RCMP in the province or territory that affects the administration of justice, as well as any other information requested by the PT Minister or the Attorney General. This information is to be provided in a reasonable and timely manner; and
- informing the PT Minister of complaints (new or outstanding) made against the Service on a monthly basis and in a format agreed upon by the CO and the PT Minister. Serious incident reporting is to be delivered in a consistent format with expected levels of detail, as agreed upon by the CO and PT Minister. The CO will also inform the PT Minister of routine complaint dispositions against the RCMP to allow the PT to monitor trends and mitigation strategies employed by the RCMP.

**APPOINTMENT AND REPLACEMENT OF KEY POSITIONS:** The Commissioner will consult with the PT Minister prior to the appointment of a CO, a Criminal Operations Officer or a Deputy Criminal Operations Officer. A designate of the PT Minister may participate in the selection process.

If the PT Minister loses confidence in the person holding any of the above positions, the PT Minister may write to the Commissioner to request the officer be replaced. The PT Minister must demonstrate sufficient cause exists for the loss of confidence and the Commissioner will ensure the officer is replaced as soon as possible.

At the request of the PT Minister, the CO will consult with the PT Minister (and/or with the CEO/Mayor of a Municipality) before the appointment of a Detachment Commander. The PT Minister may also ask the CO to consult with the community, in accordance with RCMP policies on community participation, before the appointment of the Detachment Commander (the Administration section should be consulted for further information).

If the PT Minister loses confidence in a Detachment Commander, the PT Minister may write to the CO to request he or she be replaced. If it is demonstrated sufficient cause exists, the CO will replace the incumbent, as soon as possible. The PT Minister may also write to the Commissioner to make this request.

The RCMP maintains a flexible process in the staffing of these positions as they are not only key positions within the Division but are also key positions within the RCMP organization as a whole. A national perspective must be maintained as these positions will at present, or in the

future, form the RCMP's Senior Management Team (SMT) which assists the Commissioner in fulfilling all of the RCMP's roles, responsibilities and mandates.

#### Article 8\*: Resources and Organization

**PURPOSE:** Article 8 outlines the consultative processes for any changes to the organizational structure of the Service, including major capital projects, and outlines the human resource reporting and equitable recruitment practices.

This Article also sets out the basic principles for the consultative process between the contract parties in relation to important changes to a divisional or regional headquarters.

**BACKGROUND:** This Article remains substantially the same as it was under the 1992 Agreement, except for the addition of references to the consultation process on major capital projects.

#### INTERPRETATION

**ORGANIZATIONAL STRUCTURE OF THE SERVICE AND LOCATION OF HEADQUARTERS:** The CO will consult with and seek approval of the provincial minister before making any changes to:

- the number or location of Detachments
- the number or location of Units, related to police service under this Agreement
- the organizational structure of the Division, related to police service under this Agreement

Before approving the location of divisional or regional headquarters, the Federal Minister will consult with the provincial minister, seeking any advice or recommendations on the location of headquarters for the Service. However, pursuant to *RCMP Regulations*, the ultimate decision rests with the Federal Minister.

**CONSTRUCTION OR RENOVATION OF ANY BUILDING:** Subject to Article 12 and its associated annexes, the Commissioner will obtain the approval of the PT Minister before and during the planning phase of major renovations, construction projects or demolitions for any building supporting the Service (including Detachments and district offices) to ensure the proposed buildings and improvements are appropriate and consistent with anticipated demands (e.g., population growth, authorized strength increases, etc.). Divisional and/or regional headquarters requiring renovation or construction of a new building are dealt with separately (see below).

**CONSTRUCTION OR RENOVATION OF HEADQUARTERS:** Similarly to the consultation process for other buildings, if a divisional or regional headquarters building is to be Renovated or constructed then the Commissioner will consult with the PT Minister during planning and prior

to beginning Renovations, demolition or construction. Consultation will cover any locations recommended by the PT Minister as well as a variety of other information which will enable the PT Minister to ensure the proposed building(s) and/or improvement(s) are appropriate and consistent with the Service's anticipated demands (e.g., population growth, authorized strength increases, etc.). The financial terms and conditions of the project will be approved by the PT Minister.

These provisions are linked to Article 12 where it states that the contract parties agree that any requirement to Renovate, replace or acquire new divisional or regional headquarters buildings will be by means of a separate agreement. However, if the contract parties wish to include the costs under the Agreement, then this can be done in accordance with Article 12. Otherwise, the cost to the PT is billed in accordance with the terms of the separate agreement.

**REPORTING ON THE ORGANIZATIONAL STRUCTURE OF THE SERVICE:** The CO will provide the PT Minister quarterly reports detailing the composition of the Service, including:

- current organization chart for the Division;
- location and function of all Members and Support Staff;
- location and function of all casual and temporary employees;
- number of Members, in Annex "A", by rank and function, by Detachment, Unit, and at divisional headquarters;
- number of vacancies (i.e., no staff assigned to the positions);
- number of vacancies where the assigned person is on special leave, and if possible an indication of whether the position has been backfilled; and
- number of Members deployed who are surplus to establishment.

The CO will also provide additional statements (i.e., more frequently than quarterly) as may be reasonably requested from time to time.

Each quarterly report will include an explanation of the changes from the previous report.

In accordance with the planning requirements in Article 18, each year, the CO will consult and obtain approval in principle from the PT Minister on the number of Members and Support Staff required to maintain the level of policing in the contract jurisdiction for the following Fiscal Year.

While Article 8 indicates September 1 is the date by which this human resources planning process should be completed, Article 18 stipulates that consultation and approval in principle of the number of Members and Support Staff will be included in the budget planning exercise of June 1 and 15. The dates in Article 18 will be the timelines used by the contract parties.

With reasonable notice, the CO will provide the PT Minister with any additional information, to the extent possible, relating to human resource and organizational planning of the Service.

**EQUITABLE RECRUITMENT:** To ensure equitable recruitment from across the country, the RCMP will make efforts to ensure the percentage of recruits from a province or territory corresponds with the yearly average of:

- the percentage of Members in the Division compared to the Force as a whole; and
- the percentage of the province or territory’s population compared to the country as a whole.

For example, if 6% of all the Force’s Members work in D Division (Manitoba) and 4% of Canada’s population lives in Manitoba, the percentage of recruits from Manitoba should be approximately 5%.

#### Article 9\*: Emergencies and Events

This Article is structured differently than the other sections of the Companion Document; Emergencies and Events are presented in separate sections.

**PURPOSE:** This Article provides a mechanism for temporarily accessing extra resources to assist with police duties during an Emergency or an event. It also outlines which level of government is financially responsible for the costs of policing Major Events, Special Events and different types of Emergencies.

#### EMERGENCIES

**BACKGROUND:** For the purpose of the Agreements, an “Emergency” refers to a policing emergency, meaning an urgent and critical situation of a temporary nature that requires additional police resources to maintain law and order, keep the peace or ensure the safety of persons, property or communities. With respect to emergencies resulting from natural disasters such as fires and floods, which are covered under other federal or PT legislation such as fires and floods which are co-ordinated through jurisdiction-specific emergency management frameworks the magnitude of the disaster often requires redeployment of additional police resources for initial response and for the ongoing protection of safety of persons endangered by the disaster. Due to the nature of Emergencies, resources may be redeployed in anticipation of an Emergency, or when an Emergency already exists. While Emergencies are not a frequent occurrence, it is important that police, as first responders, have access to extra resources as necessary; sometimes these resources may come from outside the jurisdiction experiencing the Emergency.

Redeployment of members occurs when Members are temporarily assigned to a different geographic location or Unit than where they are normally posted. For example, a Member attached to a Municipal Unit is considered redeployed if he or she is temporarily assigned to a PT or Federal Unit to respond to an Emergency.

**INTERPRETATION:** A key component of an Emergency is that the jurisdictional police do not have sufficient resources to deal with the situation and extra RCMP resources could be brought in from elsewhere. This could mean bringing in RCMP resources that are normally assigned to:

- a PT Unit elsewhere in the PT;
- a municipal or federal Unit within the PT; or
- RCMP resources from a different province or territory.

Under the Agreements, an Emergency is categorized as either provincial/territorial or federal. Typically, the level of government responsible for the policing activity to be delivered determines whether the Emergency is provincial/territorial or federal.

#### PROVINCIAL/TERRITORIAL EMERGENCY (WITHIN PROVINCE OR TERRITORY)

**PT Police Service Members redeployed:** If the PT Minister is of the opinion that an Emergency in an area of PT responsibility exists, or is likely to exist, the PT Minister requests in writing that the CO redeploys Members from the PT Service to maintain law and order, keep the peace and protect the safety of persons, property and communities. This means that Members assigned to a PT Police Service Unit are reassigned to assist another PT Police Service Unit. Time is usually of the essence in an Emergency response and therefore initial communications regarding operational response may likely occur between PT ADMs and RCMP CROPs to respond to the urgent and emerging situation in a timely manner. In this circumstance, the Ministerial written request may follow the initial operational response, as the situation dictates.

The PT is responsible for 70% of the costs of redeployment for the duration of the Emergency. In other words, the PT pays the costs of these Members, at the usual PT cost-share ratio of 70%, plus 70% of any additional costs Canada incurs as a result of resources being redeployed (e.g., Salary, transportation and maintenance). The cost-share remains at 70% for the duration of the Emergency. An emergency is said to have begun when the first Federal, Provincial, Territorial or Municipal Police Service assets are redeployed from outside of the usual detachment/jurisdiction for that geographic area to respond to an emergency, as defined in the PSA. The emergency is deemed to have ended when all asset(s) redeployed have returned to their respective home detachment.

**PT Police Service Members redeployed as a result of a strike, dispute or disbandment of independent municipal police force:** If the PT Minister is of the opinion that an Emergency

exists as a result of an independent municipal police force strike, dispute or disbandment, the PT Minister may request in writing that the CO redeploy Members from the Service to maintain law and order, keep the peace and protect the safety of persons, property and communities. In other words, the Service would be policing a geographic area not normally policed by the RCMP. This Ministerial written request may follow initial operational responses, as the situation dictates. Initial operational response communications may likely occur between PT ADMs and RCMP CROPS to respond to the situation in a timely manner.

In this case, the PT pays 70% of the costs of redeployment for the first 30 days and 100% of the costs thereafter. The PT Minister will make reasonable efforts to resolve any strike or dispute as soon as possible, or to establish a new police service for that area in a timely manner.

**Temporary increase in strength of the Service - Members from municipal, federal or other Units redeployed:** If Members cannot be redeployed from elsewhere in the Service, then the PT Minister may write to the CO or Commissioner requesting a temporary increase in the strength (number) of the Service. An increase in strength may occur when Members are brought from other RCMP Units in the province or territory (i.e., Municipalities policed by the RCMP, federal units or regional/divisional administrative units) or from the Service of other PTs. This Ministerial written request may follow initial operational responses, as the situation dictates. Initial operational response communications may occur between PT ADMs and RCMP CROPS to respond to the situation in a timely manner.

An increase in strength will not occur if the Commissioner thinks the increase should not take place because of other responsibilities and duties of the RCMP. In this case, the Commissioner will consult with the PT Minister before making this decision.

The PT receiving the Members pays Canada 100% of all the costs (e.g., Salary, transportation and maintenance) resulting from the increase in strength. The jurisdiction supplying the Members (e.g., Municipality, another PT or Canada) will not bear the costs directly related to the redeployment, however they are responsible for the costs of backfilling their Members while they are redeployed, should they choose to do so.

#### PROVINCIAL/TERRITORIAL EMERGENCY IN ANOTHER PROVINCE OR TERRITORY

If the Commissioner is of the opinion that an Emergency in an area of PT responsibility exists or is likely to exist in another province or territory, and where additional Members are required, the Commissioner may temporarily withdraw up to 10% of Members from another PT's Service as well as the necessary Equipment to deal with the Emergency. This will only occur after consultation with the supplying jurisdiction's PT Minister and with the approval of the Federal Minister. In practice ADM/CROPS/CO communication occurs prior to and in conjunction with consultation with the supplying jurisdiction's PT Minister.

The PT receiving the Members pays Canada 100% of all the costs (e.g., Salary, transportation and maintenance) resulting from the increase in strength. The jurisdiction supplying the Members (e.g., Municipality, another PT or Canada) will not bear the costs directly related to the redeployment, however they are responsible for the costs of backfilling their Members while they are redeployed, should they choose to do so.

#### FEDERAL EMERGENCY ANYWHERE IN CANADA

If the Commissioner is of the opinion that an Emergency in an area of federal responsibility exists, or is likely to exist, anywhere in Canada, the Commissioner may temporarily withdraw up to 10% of Members from the Service and the necessary Equipment to deal with the Emergency. This will only occur after consultation with the PT Minister. In practice, ADM/CROPS/CO communication occurs in conjunction with consultation with the supplying jurisdiction's PT Minister.

**Within province or territory:** If the Emergency occurs within the province or territory, for the first 30 days Canada and the PT will pay the costs of the withdrawal and redeployment at the usual cost-share (30/70, respectively). Costs include Salary, transportation, maintenance and any necessary Equipment. After 30 days, Canada is responsible for 100% of the costs.

**In another province or territory:** If the Emergency exists outside the province or territory, the PT will not bear the costs directly related to the withdrawal of PT Members and any necessary Equipment regardless of the length of the Emergency. However, they are responsible for the costs of backfilling their Members while they are redeployed, should they choose to do so.

#### CONSULTATION REQUIRED AFTER 30 DAYS

Regardless of the type or location of the Emergency, withdrawal or redeployment of Members will not extend beyond 30 consecutive days without further consultation between the Federal Minister, PT Ministers (for supplying and receiving jurisdictions), as well as the CEO/Mayor if the Emergency is located within their jurisdiction or their Members have been redeployed (as per the MPSA). Ongoing communications (daily briefings) occur between the ADM/CROPS throughout the Emergency to gauge the response to the situation and length of time redeployment is necessary.

#### Events

##### MAJOR EVENTS

**BACKGROUND:** In the 1992 Agreements, the definition of Special Event was the only mention of events in the Agreement; there were no provisions relating to process or financial responsibility. In the 2012 Agreements, the definition of Special Event was clarified and a clear

definition for Major Events was added, as well as procedures for redeploying resources for both types of events.

Redeployment of Members occurs when Members are temporarily assigned to a different geographic location or Unit than where they are normally posted. For example, a Member attached to a Municipal Unit is considered redeployed if he or she is temporarily assigned to a federal or PT Unit to police a Major Event.

#### INTERPRETATION

**MAJOR EVENTS:** Major Events are those events of national or international significance, occurring within Canada, that require additional police resources and where the overall responsibility for security for that event rests with Canada.

Examples of Major Events include: an international sporting event within Canada that requires the planning or coordination of security of athletes by the RCMP in either a direct or liaison capacity; a visit to Canada by Her Majesty the Queen, members of the Royal Family, or a head of state/government; or a major summit, conference or meeting when the participants are heads of states/governments (G-8 or G-20 type forum).

Given the high profile nature of these events, natural and man-made disruptions to these events can have significant security implications that can cross local, national or international boundaries. The management of the safety and security of these events is a multi-disciplinary, multi-jurisdictional issue that requires an integrated planning mechanism to ensure seamless operational management in the event that a security issue arises.

If the Commissioner is of the opinion that additional Members are required to police the Major Event, he or she may determine that Members of the Service (or from a Municipal Unit) will be redeployed. In that case, after consulting the PT Minister (or CEO/Mayor), the Commissioner may temporarily withdraw up to 10% of Members from the Service (or Municipal Unit) as well as the necessary Equipment to deal with the Major Event. Canada is responsible for 100% of all costs of the withdrawal and redeployment. This includes Salary, as well as transportation and maintenance costs for the duration of the Major Event.

Redeployment of Members beyond 30 days will not occur without further consultation between the Federal and PT Ministers.

Under the MPSAs and MPUAs, there are similar provisions covering the redeployment of municipal police service members for Major Events and includes a requirement for consultation with the Mayor/CEO.

**SPECIAL EVENTS:** Policing for Special Events is the responsibility of the jurisdictional police (i.e., provincial or municipal). Members of the Service (or Municipal Unit) can be redeployed within the Service (or to a municipal service jurisdiction) to provide additional police resources to maintain law and order, keep the peace and protect the safety of persons, property or communities.

Members of the Service will be redeployed based on the RCMP's operational assessment of the Special Event. This includes assessing the type of gathering, potential crowd behaviour and other situational factors. The duties performed by Members are to be in accordance with the duties of peace officers as outlined in Article 2.

The costs associated with redeploying Members for Special Events will be paid by the PT (or Municipality) at the cost-share ratio as set out in Article 11. This includes Salary, as well as transportation and maintenance costs.

#### Article 10\*: Municipalities

**PURPOSE:** Article 10 stipulates the terms for Municipalities to be policed by the RCMP. For provinces other than Alberta and Saskatchewan, it also sets out the province's authority to police Municipalities between 5,000 and 14,999 population with the RCMP Provincial Police Service, and specifies the manner in which costs will be covered.

**BACKGROUND:** The three territories do not have municipal policing. Article 10 in the Territorial Police Service Agreements simply states that no area is considered a Municipality under the Agreements with the entire territory falling under the jurisdiction of the Service. Similarly, Newfoundland and Labrador does not have municipal policing in their province, so most of this section of the Companion Document is applicable only to the remaining seven provinces with contract policing.

A new provision was introduced to the 2012 Agreements which allows the Service to continue policing a Municipality that meets or exceeds 5,000 population. This option is available at the PT Minister's direction and is contingent on the Municipality remaining under 15,000 population and the arrangement being cost neutral to Canada. This new provision gives PTs some flexibility in terms of utilizing different policing models.

This provision is not included in the Alberta or Saskatchewan Police Service Agreements.

Otherwise, Municipalities with populations over 5,000 are policed under individual MPSAs. If a Municipality not currently policed by the RCMP is interested in entering such an agreement with Canada, it would be subject to admissibility criteria established by the federal government for a new municipal agreement. The admissibility criteria are covered in the New Entrants Guidelines (NEG) which stipulate two sets of terms: one with respect to municipalities never

previously policed by the RCMP and the other, with respect to regional policing areas. The NEG is further explained at the end of the Administration section.

#### INTERPRETATION

##### DEFINITIONS SPECIFICALLY APPLICABLE UNDER THIS ARTICLE

The Article provides definitions for Furnished, Municipal Occupancy Ratio and Municipal Support Staff. Municipality is defined under Article 1.

Municipalities are responsible for 100% of the accommodations related costs including, the furnishings. Items that do not fall within the definition of Furnished are subject to the applicable cost-share ratio set out in Article 11.

Under this Article, the Municipal Occupancy Ratio is used to calculate the portion of accommodations costs related to a PT Police Service Unit providing policing to a Municipality.<sup>5</sup> Similarly, in this Article “Municipal Support Staff” refers to persons utilized in support of the Provincial Police Service Unit providing policing to a Municipality.

##### POPULATION THRESHOLD – 10.2

Generally, the PT Police Service is not required to deliver policing services in any Municipality having a population of 5,000 or more. At that threshold, Municipalities previously policed under the PT Police Service become subject to a different set of terms. These Municipalities may decide to obtain their policing services from an independent police service. To continue receiving policing services from the RCMP, there are two options. The Municipality will enter into a MPSA or, in British Columbia, a MPUA. Alternatively, the PT Minister could direct that the Municipality continue being policed by the PT Police Service under a Provincial Police Unit for that Municipality.

##### GRANDFATHERING – 10.3(a)

Any Municipality policed by the RCMP under a MPSA or MPUA on March 31, 2012, was automatically eligible for a 2012 Agreement.

In the past, some municipalities with populations below 5,000 entered into MPSAs. Where these arrangements were in force on March 31, 2012, regardless of the population threshold, they were eligible for a 2012 Agreement. There are Municipalities of less than 5,000 population with 2012 MPSAs in Manitoba, Nova Scotia and New Brunswick.

##### MUNICIPALITIES 5,000 POPULATION OR MORE – 10.3(b)

Municipalities with populations of 5,000 or more that were policed by the Service on March 31, 2012, had one or two options if they wished to continue to receive RCMP policing services after that date. All Municipalities were eligible to sign a 2012 MPSA or MPUA<sup>8</sup>. Alternatively, the PT Minister could direct that the Municipality continue being policed by the Service (as long as its population is and remains less than 15,000, and the arrangement remains cost neutral to Canada). This requires that the PT absorb the costs that would otherwise be covered by the Municipality according to the terms of the MPSAs or MPUAs (i.e., 100% of accommodations, Support Staff).

Note: The contract parties support a wider interpretation of this provision that would allow the PT Minister to direct that a Municipality with a population between 5,000 and 14,999 that had a MPSA or MPUA as of March 31, 2012 (rather than being policed by the Service on that date), may be policed by a Unit of the PT Police Service if so directed by the PT Minister.

#### EMERGING MUNICIPALITIES – 10.3(c)

Municipalities policed by the PT Police Service that meet or exceed a population of 5,000 during the term of the Agreement have one or two options if they wish to continue to receive RCMP policing services. All Municipalities are eligible to sign a MPSA or MPUA<sup>10</sup>. Alternatively the PT Minister may direct that the Municipality continue being policed by the PT Police Service (as long as its population is and remains less than 15,000, and the arrangement remains cost neutral to Canada). This requires that the PT absorb the costs that would otherwise be covered by the Municipality according to the terms of the MPSAs or MPUAs (i.e., 100% of accommodations, support staff).

#### EMERGING (OTHER) – 10.3(d)

During the 20-year term of the Agreement, if an area policed by the PT Police Service becomes a Municipality and has a population of 5,000 or more, the Municipality has one or two options, if they wish to continue to receive RCMP policing services. All Municipalities are eligible to sign a MPSA or MPUA<sup>12</sup>. Alternatively, the PT Minister may direct that the Municipality continue being policed by the PT Police Service (as long as its population is and remains less than 15,000, and the arrangement remains cost neutral to Canada). This requires that the PT absorb the costs that would otherwise be covered by the Municipality according to the terms of the MPSAs or MPUAs (i.e., 100% of accommodations, support staff).

#### MUNICIPALITY 5,000 OR OVER POLICED BY THE PT POLICE SERVICE – 10.4 AND 10.5

If the PT Minister directs that a Municipality 5,000 or over be policed by a Unit of the Provincial Police Service, then the PT becomes responsible for the costs normally incurred by a Municipality, as outlined below.

**Support staff – 10.4:** Under the MPSAs or MPUAs, Municipalities are responsible for 100% of the costs related to providing support staff for their Municipal Police Service. Similarly, if the PT Minister chooses to police the Municipality with a Provincial Police Unit, the PT becomes responsible for providing the support staff and covering 100% of the related costs. The support staff must meet the job and other related requirements as determined by the Commissioner.

If the support staff are also supporting federal police units, Canada will calculate the proportionate share of the Salaries attributable to each policing Unit and ensure that the PT is charged 100% only for the costs related to the support staff supporting the Provincial Police Unit which is policing the Municipality.

Canada may provide federal public service employees to act as Municipal Support Staff if the PT does not fill these positions. In that case, Canada will provide reasonable notice to the PT that they will be taking this step and the PT will pay 100% of the costs incurred by Canada.

#### Accommodations for Provincial Police Unit policing a Municipality at the PT Minister's Direction – 10.5

Under the MPSAs or MPUAs, Municipalities are responsible for providing accommodations for their Municipal Police Service and paying 100% of the related costs. Similarly, if the PT Minister directs that a Municipality be policed with a Provincial Police Unit, the PT becomes responsible for paying 100% of the accommodations costs (thus ensuring this arrangement remains cost neutral to the federal government). This includes accommodations for both Members and support staff. The Article prescribes the elements that are included in municipal accommodations, such as furnished office space including utilities (e.g., heat, light, water supply) and, if required, jail cell facilities and garage space.

The accommodations will be provided by the PT unless the PT and Canada agree that Canada will provide the accommodations. Both scenarios are described below.

#### Accommodations provided by PT

The PT will provide and maintain accommodations for the Provincial Police Unit policing the Municipality. The PT will pay 100% of the costs, including: all operating and maintenance costs (such as building and property maintenance services).

The accommodations provided must be to the satisfaction of the Commissioner and meet the security standards of the RCMP. If the Commissioner has any concerns with the accommodations provided, he or she will provide the Provincial Minister with written notice of the reasons the accommodations is not satisfactory and detailed information on the necessary actions to resolve the deficiencies. The PT has two years to correct the deficiencies to the

satisfaction of the Commissioner, or Canada may take corrective action itself or lease other accommodations and charge the province 100% of the costs. More information is provided under Administration below.

#### Accommodations provided by Canada

If, by arrangement between Canada and the PT, Canada provides and maintains any accommodations for use by the Provincial Police Unit policing a Municipality, the PT will pay to Canada 100% of the costs incurred by Canada to provide and maintain these accommodations. The PT's share of the costs is determined annually using the Municipal Occupancy Ratio formula. The PT will also pay 100% of any payment in lieu of taxes (PILT) for that building, based on the Municipal Occupancy Ratio. More information is provided under Administration below.

#### Exempted Costs

Any costs relating to the transfer of Members into the Provincial Police Unit policing the Municipality will not be billed to the PT. Canada is responsible for 100% of these costs. This is in keeping with the provisions under the MPSAs and MPUAs.

#### PROVISIONS UNIQUE TO CERTAIN PROVINCES

The **Nova Scotia** Agreement contains a distinct definition of Municipality which excludes municipalities incorporated as municipalities under a county or a district. Article 10 also specifically protects the Halifax Regional Municipality under the Provincial Police Service, excluding it from the population threshold criteria.

#### ADMINISTRATION

##### COST-SHARE

The cost-share under existing RCMP Police Service Agreements is determined as follows:

- provinces, territories and municipalities with populations between 5,000 and 14,999, pay 70% and the federal government pays 30%; and
- municipalities with populations 15,000 or more pay 90% and the federal government pays 10%.

For new entrant Municipalities that have never been policed by the RCMP, if the Municipality meets federal admissibility criteria (as per the federal government New Entrants Guidelines (NEG)), the Municipality pays 100%.

### Article 11\*: Basis of Calculation of Payment

**PURPOSE:** Article 11 describes the costs covered under the Agreements, how the costs are determined and who is responsible for payment.

**BACKGROUND:** The specific details of Article 11 vary slightly between the PT agreements and the municipal agreements. The costs incurred directly by the RCMP in each jurisdiction are not necessarily comparable to an independent municipal police service, nor do they reflect the total cost of providing each jurisdiction with a police service. Some costs incurred by the RCMP may not exist within an independent municipal police service (e.g., inter-divisional transfers), as well as costs incurred centrally by the RCMP or Canada (e.g., Accounting Operations, Shared Services Canada) may be applicable to each jurisdiction.

Some notable changes in the 2012 Agreements in comparison to the 1992 Agreements include:

- RCMP Programs (Recruiting, Cadet Training Program at Depot and the Police Dog Services Training Centre) move from a static rate of \$3,500 (for all three programs) per FTE Utilization of Members to a three-year rolling average of actual costs based on the previous three Fiscal Years effective Fiscal Year 2015-16.
- The cost of the Police Reporting and Occurrence System (PROS) is to be updated on an annual basis, based on the final costs of the previous Fiscal Year. PROS is also the only cost which is to be allocated to the PTs based on FTE Utilization of Members for the *previous* Fiscal Year.<sup>18</sup>
- The cost incurred by Canada for the Corps of Commissionaires to provide point of entry security at divisional/regional headquarters has been added to the cost base.
- The dollar threshold for PTs to amortize Equipment increased from \$100,000 to \$150,000. Amortization is now based on the estimated life of the equipment and the federal Consolidated Revenue Fund lending rate at the time of acquisition.
- The cost base includes costs for both Legal Services (previously excluded from the cost base) and Enhanced Reporting and Accountability (new provision in 2012 Agreements).
- The costs incurred by Canada for the External Review Committee and the Staff Relations Representative Program (and any successors) are excluded from the cost base.

**Cost Base:** The term cost base is used extensively throughout this section of the Companion Document. The cost base refers to the various costs, or the totality of the costs, which are cost-shared between Canada and the PTs.

Costs in the cost base are separated into two major categories.

1. *Direct Costs* – are expenditures associated with the RCMP personnel (Members and public service employees (PSEs)) employed in each jurisdiction. Direct costs include Salary, overtime,

training, travel, and locally purchased equipment such as computers and vehicles, etc. It is important to note that not all costs incurred locally are included in the cost base. There are three broad categories of direct costs:

- a) *Billable Costs* – these costs are incurred locally and are directly billable to each PT. Examples of items in this category include: Salary, local training costs and equipment purchased for use in the Service.
- b) *Non-Billable Costs* – these costs are incurred locally but are deemed a federal responsibility and are not applicable to the cost base. Some costs are non-billable because Canada, not the PT, is responsible for the internal management and control of the RCMP, so the PT should not, for example, be responsible for civil lawsuits resulting from internal management decisions. Another principle is that the PT would not incur certain costs if they had their own independent police service. An example of these costs is interdivisional transfers – when the RCMP transfers personnel from one PT to another.
- c) *Billable Costs in Division Administration* – some costs are incurred locally and while they are considered applicable under the cost base, they form part of divisional or regional administration rate that is included as Other Costs. These costs are shared based on the formula outlined in the Agreement. Examples include health costs and maternity leave.

2. *Other Costs* – these costs are not necessarily incurred locally, but are included in the cost base. In most cases, these costs are incurred by the RCMP at the divisional or regional level, but may also include costs associated to consolidated services (e.g., Shared Services Canada, National Accounting Operations) incurred by the RCMP nationally or by other federal government departments. These other costs include items such as employee benefit plans (the employer’s share of superannuation, Canada Pension Plan and Employment Insurance), shared administration costs (referred to as divisional or regional administration), and RCMP Program costs (Recruiting, Cadet Training Program at Depot and the Police Dog Services Training Centre).

**Cost-Share Ratios:** Depending on the contract type and population of the jurisdiction, the cost-share ratio varies.

Contract Type	PTM’s Share	Canada’s Share
Provincial / Territorial	70%	30%
Municipal: Population 5,000 – 14,999	70%	30%
Municipal: Population 15,000 or more	90%	10%

## INTERPRETATION

### OPERATING AND MAINTENANCE COSTS – 11.2 (a)

The cost of providing and maintaining the Service each Fiscal Year includes operating and maintenance costs such as Salaries and wages, transportation and telecommunication, information, professional services, rentals, repairs, utilities and supplies and miscellaneous operational expenses described in the RCMP Chart of Accounts. The Chart of Accounts is updated annually prior to the beginning of a new Fiscal Year but in-year changes can be made if required.

**Administration related to operating and maintenance costs:** In accordance with Article 18, the CO will provide a current version of the Chart of Accounts annually to the PT Minister.

Any changes to the Chart of Accounts and their impact on any RCMP Standard Tables are brought to the attention of CMC.

### EQUIPMENT – 11.2 (b) AND 11.2 (l)

There are two categories of Equipment defined under Article 1: Type A and Type B.

Equipment-Type A refers to one-time or extraordinary acquisitions such as specialized motor vehicles, ships and other water craft, aircraft of any kind, identification systems, telecommunication and other communication systems, including radio towers and related assets affixed to real property.

Equipment-Type B refers to annual or recurring acquisitions such as regular police cruisers, radio and computer equipment, security and investigational equipment and technology or licensing fees. Articles 14 and 15 should be consulted for further information on Equipment.

All Equipment costs are direct costs included in the cost base, unless the cost is \$150,000 or more and the PT Minister has requested that the cost be amortized in accordance with Article 11. The option to amortize this Equipment may assist some PTs who may find it difficult to pay for large capital expenditures in one year.

A PT may choose to amortize Equipment if all these criteria are met:

- the item is classified as Equipment-Type A;
- the cost of the item is \$150,000 or more;
- the amortization period is not longer than the estimated life of the Equipment; and
- the PT Minister requests it be amortized.

There may be circumstances where individual items under \$150,000 are eligible for amortization. This would only occur when smaller items are being grouped and considered part of a much larger project, such as the replacement of a provincial radio system where individual radios could be considered as part of the larger radio replacement project and subject to amortization.

#### PENSION CONTRIBUTIONS – 11.2 (c-e)

Costs associated with Superannuation and Canada Pension Plan for both Members and public service employees (PSEs) are included in the cost base (as Other Costs) and are cost-shared under the Agreement.

**Superannuation:** For contract policing billing purposes, the employer's contribution rate for Members' superannuation is based on the Pension Panel's recommendation. See the Pension Panel section of the Companion Document for more information on how pension contributions for Members are determined.

Contract parties also cost-share the employer's contribution to the federal PSE's pension. The rate is determined annually by RCMP National Headquarters based on actuarial reports produced by the Office of the Superintendent of Financial Institutions (OSFI) of Canada.

**Canada Pension Plan:** Contract parties also cost-share the employer's contributions made to the Canada Pension Plan for all employees (including Members and Support Staff, including those individuals performing guard duties for lock-ups under the Service).

#### EMPLOYMENT INSURANCE – 11.2 (f)

The costs associated with Employment Insurance (EI) are included in the cost base as Other Costs. EI premiums are based on, and deducted from, an employee's maximum insurable earnings. Insurable earnings include salary, wages, allowances and other remuneration paid to an employee. Both employees and employers must pay EI premiums. Each year, the Canada Revenue Agency determines the maximum insurable earnings amount and the EI rate. The RCMP then completes a calculation that converts the rate (based on calendar year) into a Fiscal Year rate.

The calculation for Member EI recovery rate is reduced due to the current sick leave benefits available to them. The current unlimited sick leave policy has an impact on the short-term disability plan available to Members and thus reduces the employer share of EI.

#### DIVISIONAL AND REGIONAL ADMINISTRATION – 11.2 (g)

**General Background:** Administration in this context refers to the common support services provided to multiple business lines of the RCMP (federal, provincial, territorial, municipal and First Nations). These support services may include financial services, planning, client services, human resources, informatics and management services. Administration costs include personnel and O&M, including employer paid benefit plans (pensions and employment insurance) for administration employees.

The divisional and regional administration allocation methodology is used to share costs among all business lines in a Division or Region, such as health services costs for all employees including non-divisional administration staff. The costs of Members on maternity leave and other special leaves are included as well. The allocation of administration costs ensures an equitable sharing of all RCMP administrative costs between the various business lines of the RCMP.

#### RCMP PROGRAMS2– 11.2 (h-i)

**Recruiting, Cadet Training at Depot and the Police Dog Service Training Centre:** Under the 1992 Agreement, a flat rate of \$3,500 was applicable to Members and temporary civilian employees (TCEs). The flat rate was established for ease of administration, but did not adjust relative to the fluctuation of actual costs.

For the period beginning April 1, 2012 and ending March 31, 2015, the charge for Recruiting, the Cadet Training Program at Depot (Regina, Saskatchewan) and the Police Dog Service Training Centre (PDSTC) (Innisfail, Alberta) will be based on the FTE Utilization of Members in the contract jurisdiction multiplied by \$3,500.

Starting April 1, 2015, and for the remainder of the term of the Agreements, the costs for these three programs will be determined by way of a rolling three-year average based on actual costs expended on each program in the previous three Fiscal Years.

Since Recruiting and the Cadet Training Program at Depot are National Programs these costs will be distributed across all federal, provincial, territorial, First Nations, municipal and airport business lines in Canada. While the PDSTC is also a National Program, its costs are shared based on the FTE Utilization of all police dog service teams in the RCMP.

Pursuant to Article 21, the RCMP will deliver Multi-Year Financial Plans to CMC every September 15. CMC will indicate its support (or not) for those plans by December 15. Article 21 of the Agreement and Companion Document should be consulted for further information about the National Programs Multi-Year Financial Plans.

#### Administration related to National Programs

**Recruiting – 11.2 (h), (i(i))**

Beginning April 1, 2015, the charge for Recruiting will be determined by dividing the average of all expenditures for recruiting in the previous three Fiscal Years by the average FTE Utilization of all Members in the RCMP for the previous three Fiscal Years multiplied by the current FTE Utilization of Members in the Service.

The charge for Recruiting includes divisional, regional and national recruitment related costs such as: Salaries and travel of recruiters, office supplies and equipment, and advertising and marketing. It also includes: the processing of applicants; applicant travel; career presentations; written examinations; physical, medical and psychological testing; interviews; polygraph tests; field investigations; and security clearances.

The charge for Recruiting does not include the major capital investments required to construct, Renovate or acquire buildings to accommodate the program delivery personnel.

**Cadet Training Program at Depot – 11.2 (h), (i(ii))**

Beginning April 1, 2015, the charge for the Cadet Training Program at Depot will be determined by dividing the average of all expenditures for cadet training for the previous three Fiscal Years, minus the average of any revenues received for training other police services or other agencies in the previous three Fiscal Years, by the average FTE Utilization of all Members in the RCMP for the previous three Fiscal Years, multiplied by the current FTE Utilization of Members in the Service.

The cost of the Cadet Training Program includes things such as: the cadet allowance; clothing and operational equipment; travel to Depot; trainer relocation to Depot; and relocation of the cadet to their first posting. It also includes Salaries, relocation expenses, office supplies and equipment for training support and Depot administration. Facilities' operating and maintenance costs for equipment, vehicles, professional and contract services, utilities and minor capital are billable costs.

The cost of the Cadet Training Program at Depot does not include the major capital expenditures required to construct, Renovate or acquire buildings, or the operating and maintenance expenses for buildings at Depot not used for cadet training (e.g., RCMP Heritage Centre).

**Police Dog Service Training Centre – 11.2 (h), (i(iii))**

Beginning April 1, 2015, the charge for the PDSTC will be determined by dividing the average of all expenditures for the PDSTC for the previous three Fiscal Years, minus the average of any revenues received for the sale of dogs or dog training provided to other agencies for the

MCC

Structure of Policing in Nova Scotia

MacKnight

previous three Fiscal Years, by the average FTE Utilization of all police dog teams in the RCMP for the previous three Fiscal Years multiplied by the current FTE Utilization of police dog teams in the Service.

The cost for the PDSTC includes things such as kennel operations, equipment and professional services for dog breeding (i.e., veterinary services). It also includes training operations, Salaries and travel for trainers in the Dog Team Training Program as well as those costs related to re-certifications. Administration costs such as Salaries, O&M, relocation to the PDSTC, office supplies and equipment for the PDSTC, as well as facilities' O&M costs including maintenance of equipment, vehicles, utilities, minor capital and contractual services are billable costs.

The cost of the PDSTC does not include the major capital expenditures required to construct, Renovate or acquire buildings.

#### RECORDS MANAGEMENT SYSTEM (PRIME/PROS) – 11.2 (j)

The PTs are responsible for the Service's share of costs for information and operational records management systems (O/RMS).

#### POINT OF ENTRY SECURITY – 11.2 (k)

The Corps of Commissionaires have a contract with the federal government to provide points of entry (POE) security at federal government buildings including divisional/regional headquarters. The costs associated with the Corps of Commissionaires providing these services are allocated to contract jurisdictions relative to their share of the total occupancy of the building. The cost includes all of the costs for supplying the service (salary, benefits and uniforms, etc.).

#### COMMISSION FOR PUBLIC COMPLAINTS AGAINST THE RCMP (CPC) – 11.2 (m)

The CPC is an independent agency that ensures that public complaints made about the conduct of Members are examined fairly and impartially. The CPC is not part of the RCMP. The CPC reports findings and makes recommendations to the RCMP Commissioner regarding public complaints made against the RCMP.

The CPC provides civilian oversight to the entire RCMP. Consequently, the cost is distributed based on the FTE Utilization of Members in all business lines across Canada.

**Administration related to the CPC:** The charge for the CPC to a specific business line is calculated by dividing the cost to Canada to maintain and provide the CPC by the total FTE Utilization of all Members and multiplying the product by the total FTE Utilization of Members in the Service. All figures are derived from the current Fiscal Year.

The cost of the CPC is published every year in the CPC's annual report to Parliament.

**LEGAL ADVISORY SERVICES – 11.2 (n):** Legal costs have historically been excluded from the cost base. However, as part of the 2012 Agreements, a defined amount towards the costs of legal advisory services in direct support of the Service has been added to the cost base.

**ENHANCED REPORTING AND ACCOUNTABILITY – 11.2 (o):** Charges for an enhanced reporting and accountability capacity have been introduced to the 2012 Agreements because of the Agreement's emphasis on the RCMP's increased accountability to the contract parties and the general public.

A base amount of \$1.5 million is prorated to all contract policing jurisdictions for the development and implementation of enhanced reporting and accountability, for a minimum of three years.

Each year, the RCMP will provide annual statements to CMC on the number, location, activities and position of the staff assigned to provide and maintain enhanced reporting and accountability. The contract parties will work together to avoid a duplication of existing capacity within the Service and to explore ways in which to better utilize the existing capacity to provide improved administration of the Agreement.

The resources dedicated to increased capacity may only be increased by mutual agreement between the contract parties. If an increase is agreed to, the contract parties will revise the base amount in writing.

#### **COSTS EXCLUDED FROM THE COST BASE – 11.3 AND 11.4**

The following items are not cost-shared by the contract parties. The costs are excluded from the Agreement (Canada pays 100%):

- interdivisional transfers of personnel or equipment, other than trainers who are relocated to Depot (this cost is captured as part of the Cadet Training Program at Depot rate);
- the cost of Equipment–Type A which is \$150,000 or more and has been amortized subject to paragraph 11.2(1) at the request of the PT Minister;
- the cost of any civil action, compensation claim, *ex gratia* payment or claim for associated legal fees; and
- the cost incurred by Canada in respect of providing point of entry security for federal buildings other than divisional or regional headquarters.

In addition, costs related to Members on special leaves such as sick leave or suspension for more than 30 days, parental leave or pension retirement leave are not directly billable to the Service. However, these costs are allocated to divisional administration and will be charged to the contract jurisdictions through the divisional administration rate.

#### DEDUCTIONS – 11.5

The RCMP will deduct 70% of the following credits, refunds or reimbursements from the amount owed for the provision of contract policing in the contract jurisdictions:

- any refunds or reimbursements obtained by Canada with respect to any expenses that were paid by the PT;
- the revenue received by Canada from leased accommodations and Living Quarters deductions from Members utilized by Canada to provide and maintain the Service;
- any amount received by Canada from a Municipality in respect of accommodations also paid for by the PT; and
- any amount received by Canada from the sale, transfer out of the Service or other disposition of any item of Equipment that cost less than \$150,000 and was purchased by Canada for use in the Service.

#### COSTS PAID AT 100% BY CANADA – 11.6

Canada is responsible for paying 100% of all costs incurred in respect of the External Review Committee and the Staff Relations Representative Program, or their respective successors.

#### COSTS PAID AT 100% BY PROVINCES AND TERRITORIES – 11.7

The PTs are responsible for 100% of the following costs:

- hospitalization, medical examination or treatment, including mental health examination or treatment, for any person in the custody of the RCMP except if such costs have been incurred in the obtaining of evidence;
- conveyance by a third party that is obtained by a Member of the Service for a disabled, injured, ill or deceased person if the cost of the service is not paid by or on behalf of the person or their estate; and
- all incremental costs incurred when, at the request of the PT, the scope and duration of a search and rescue operation is extended beyond that which the CO considers to be appropriate in the circumstances and the CO has so advised the PT Minister.

**Witness Fees for the Provinces:** The **provinces only** are responsible for 100% of the cost of witness fees, transportation, maintenance and escort costs for persons (except for Members and Support Staff) required as witnesses in criminal and civil proceedings and proceedings under provincial laws.

**INDEMNITY – 11.8**

The PT government is indemnified and is not held liable to settle any claim or action against a Member of the PT Police Service. This is in keeping with the principle that the Commissioner is responsible for the internal management of the RCMP.

**PENSION PANEL – 11.9**

Pension Contribution and Accounts are defined under Article 1. Pension contributions are included in the cost base.

The Pension Panel (the Panel) makes recommendations regarding the rate of employer's contributions billable by the RCMP to contract jurisdictions every three years (or as otherwise determined by the Panel) based on a review of the Accounts for the three Fiscal Years preceding the review date.

**Article 12\*: Accommodations Program- AB, NS, SK Version**

Under the 2012 Police Service Agreements, there are two different accommodations models and therefore there are two versions of the Companion Document Article 12. This version is for Alberta, Nova Scotia and Saskatchewan. The other version, which precedes this section of the Companion Document, is for British Columbia, Manitoba, New Brunswick, Newfoundland and Labrador, Northwest Territories, Nunavut, Prince Edward Island, and Yukon.

**PURPOSE:** Article 12 describes the processes for sharing the costs of federally-owned accommodations used to support the PT Police Service. The purpose of the Article is to outline how these accommodations will be planned, budgeted, managed, reconciled and reported over the course of the Agreement with specific attention to the resulting Accommodation Program Charge (APC) and to the setting of five-year plans and budgets. The Article also sets out a high level process for operating and maintenance (O&M) plans for both federally-owned and federally-leased buildings.

**BACKGROUND:** As a result of the mutual desire of all parties to ensure the sustainability of federally-owned accommodations used by the Service and to enhance the management, the accommodations provisions under the 2012 Agreements are significantly different than previous Agreements.

This new article, considered to be transformational when compared to the last agreement, was negotiated and agreed upon as a result of a common desire to enhance the management of capital associated with contract policing accommodations. Specifically, it was developed to increase focus on such principles as sustainability, affordability and flexibility. This Article de

facto replaces the rent-based model whereby \$107.64 per m<sup>2</sup> was charged for contract policing accommodations for which the RCMP did not pay rent.

This new article also introduces the concept and application of an APC which is based on five-year plans and budgets for Major Capital, Minor Capital and Living Quarters. The purpose of the APC is to normalize the required budgets over a five-year period in an effort to promote long-term real property planning and minimize budgetary ebbs and flows for federal and PT governments. Further, this Article introduces greater clarity on budgets dedicated to new construction, major renovations and on-going life-cycle investments. When compared to the last agreement, it provides for the construction, major renovation and life-cycle requirements needs of living quarters while introducing a specific budget for life-cycle (minor capital) costs.

Last but not least, this Article introduces the means by which federal and PT governments will achieve a jointly-planned and flexible accommodations program, cost-shared at 70-30 with a high emphasis on consultation.

#### Article 13\*: Removal of Buildings and Living Quarters and Transfer of Buildings, Living Quarters and Land

**PURPOSE:** The purpose of this Article is to outline the process for calculating the Fair Market Value of federally-owned Buildings and Living Quarters that are removed from the Service and/or acquired by the PT Police Service.

**BACKGROUND:** Under the 1992 Agreements, the PTs paid a flat rental rate per square metre for the Service to occupy space in federally-owned buildings. Canada was responsible for all acquisition, construction and renovation costs over \$30,000 per project (PTs paid for repairs of up to \$30,000 per project) for federally-owned buildings and living quarters. These Agreements did not have any provision regarding sharing the proceeds from the disposition of buildings or living quarters following their removal by Canada from the use of the Service. These Agreements also did not have any provisions for the acquisition by the PTs of federally-owned buildings or living quarters.

The 2012 Agreements are based on the parties sharing the actual costs of federally-owned accommodations. PTs are responsible for a proportionate share of the cost of acquisition, construction and Renovation for federally-owned Buildings and Living Quarters used to support the Service. The Agreements recognize the financial contributions of the PTs through the sharing of proceeds from the disposal of Buildings or Living Quarters by Canada following removal from the use of the Service. The Agreements also set forth the process by which PTs can acquire federally-owned Buildings and Living Quarters which are no longer required by Canada.

### Article 15\*: Transfer of Ownership of Equipment

**PURPOSE:** Article 15 sets out the process for managing the transfer of any Equipment purchased by Canada for the PT Service if the Agreement expires or is terminated.

**BACKGROUND:** This Article is similar to the provisions that existed under the 1992 Agreement, except:

- an adjustment was made to the minimum amount that can be amortized (increased from \$100,000 to \$150,000);
- the addition of the requirement for the PT to provide notice of their interest in taking over ownership of specific Equipment (as well as timelines); and
- the addition of the requirement that the transfer of Equipment be completed within six months of the termination or expiry date (unless the contract parties agree otherwise).

The Companion Document section on Article 14 may be consulted for additional information on the terms and conditions that apply to Equipment.

Unless an extension or renewal has been negotiated by the contract parties, the Agreements expire on March 31, 2032. However, in accordance with Article 3, Canada or the PT may terminate the Agreement on March 31 of any year, provided the required notification is given.

**INTERPRETATION:** The following terms are defined under Article 1: Equipment, Equipment-Type A, Equipment-Type B, and Fair Market Value.

Article 15 provides the mechanism to recognize the equity a PT may have accrued towards the purchase of any item of Equipment upon the termination or expiry of the Agreement. If Canada no longer requires any Equipment they purchased for the Service, then the PT has the option to acquire it at the current Fair Market Value, less their paid share, excluding interest.

This Article covers all Equipment purchased by Canada for the Service.

### Article 16: Jails and Lock-ups

**PURPOSE:** Article 16 acknowledges responsibilities for jails and police lock-ups and sets out provisions regarding changes to the number and size of lock-ups.

**BACKGROUND:** Most Detachments in the Service are equipped with jails or police lock-ups for the purpose of housing persons lawfully detained by police in the execution of their duties. The lock-up cells are intended to be used as temporary holding cells, as opposed to correctional facilities.

**INTERPRETATION:** This Article acknowledges that Canada has no responsibility to maintain jails and lock-ups for persons committed to custody for less than two years. Persons committed to

custody for less than two years are normally a PT responsibility and serve time in a PT correctional facility. In practice, there are times when these persons are held in the police lock-up and this practice will continue unless otherwise agreed by the parties.

The number, capacity and location of jails and lock-ups in existence on April 1, 2012, will not be reduced without prior consultation with the PT Minister.

#### ADMINISTRATION

**CONSULTATION WITH PROVINCIAL OR TERRITORIAL MINISTER:** Under circumstances which may require the closure of a lock-up (for health, safety or other reasons), or a reduction in a lock-up's size or location, the RCMP must consult with the PT Minister as soon as possible, as any changes may affect policing or other parts of the justice system. Working together, the RCMP and the PT should mutually agree on a way forward.

**FINANCIAL RESPONSIBILITY:** Lock-ups are part of the Detachment building and are cost-shared accordingly.

**RESPONSIBILITY FOR GUARD DUTIES:** Responsibility for providing guards and/or matrons depends on who owns or leases the Detachment building. If the Detachment building is owned or leased by the federal government, the Corps of Commissionaires and/or guards provide guard duties. If the Detachment building is owned or leased by a Municipality, employees of the Municipality provide guard duties. Either way, municipalities are responsible for 100% of the costs for guards and matrons for their Municipal Police Service.

#### Article 18\*: Financial Planning and Reporting

**PURPOSE:** Article 18 establishes a collaborative process for the CO and PT Minister to engage in multi-year, long-term financial planning and reporting for the Service and divisional/regional administration. This process ensures the contract parties discuss future resource requirements, increases financial accountability and transparency, while respecting the budgetary processes of both the federal and PT governments. It also provides the contract parties with information so they can jointly identify opportunities for cost containment and strengthened financial efficiency, where appropriate.

**BACKGROUND:** The 2012 Agreements provide a formal multi-year financial plan, establishing enhanced consultation between the CO and the PT Minister. Under the 1992 Agreements, financial planning was limited to one year.

Ensuring that the federal share of contract policing funds is available each year depends, in part, on accurate financial and resource forecasting by all contract policing jurisdictions. The RCMP, as a federal government entity, undertakes a comprehensive planning process for its

annual Contract Policing Incremental Funding Treasury Board submission (submitted as part of Canada's Annual Reference Level Update, or ARLU). As part of this process, the RCMP analyzes planned growth, attrition rates, restructuring initiatives, transfers, etc., over all business lines in order to forecast the total number of additional personnel and incremental funding required for contract policing. Each Fall, the RCMP is required to provide detailed information in the federal Treasury Board submission to substantiate the requests of the contract partners for planned incremental contract policing growth for the next fiscal year.

The information provided by the PTs under Article 18 is critical for the preparation of the federal Treasury Board submission. As PT budget processes and timelines do not align with the federal ones, the approved PT budgets are not available when the federal Treasury Board submission is made. For this reason, it is the projected annual budgets and resource forecasts (together forming the "approval in principle" budget and personnel figures) which inform the development of the federal Treasury Board submission.

Enhanced consultation and collaboration between the CO and the PT Minister on financial matters and the planning and reporting processes outlined under this Article ensure that the budget processes of federal and PT governments are respected and that all contract parties have the information they require to effectively manage the finances of the Service and divisional and/or regional administration.

#### INTERPRETATION

**CONSULTATION PHASE:** The CO and PT Minister will exchange information in order for the RCMP to prepare the projected multi-year financial plan (the Plan). The CO and PT Minister will determine the format and schedule for this exchange of information.

The information exchanged between the CO and PT Minister will include, at a minimum, the following:

- number of positions required for the Service;
- number of positions required for divisional and/or regional administration to support the Service;
- budgetary considerations affecting the Service and divisional and/or regional administration;
- proposed multi-year infrastructure and equipment plans;
- any significant deviation between the budget for the previous Fiscal Year and expenditures for the current Fiscal Year; and
- any other information agreed to by the CO and PT Minister.

**THE MULTI-YEAR FINANCIAL PLAN (THE PLAN):** The PT Minister will determine whether the Plan covers three, four or five Fiscal Years. The Plan period begins on April 1 of the next Fiscal Year. The Plan will be updated annually for the current and following Fiscal Years, and is therefore a “rolling” financial plan. At the onset of each fiscal year, Divisions and PTs will engage in the divisional planning process as outlined in the multi-year financial plan timeline (see timeline at the back of Article 18 CoDo pg. 210). Following discussion and collaboration, the CO will provide the PT Minister with the Plan on or before June 1 each year.

Following consultation and collaboration on the development of the Plan and upon receipt of the Plan from the CO, the PT Minister will review the information and/or proposals described in the Plan.

Increases to resources proposed in the plan will be supported by a business case which will provide sufficient information for the jurisdiction to make the necessary decisions and satisfy their funding requests. If required by the PT, the template found at the end of Article 18, CoDo pg. 208-209 could be used, keeping in mind that some PTs may require more information and others may require less. The level of information required will be confirmed between the Division and the PT representative.

**BUDGET:** The PT Minister will provide the projected annual budget for the Service and divisional and/or regional administration for the next Fiscal Year. If available, the projected budgets for the remaining years of the Plan will also be provided. The PT Minister will provide this information in writing to the CO by June 15. This letter is commonly referred to as the “approval in principle” letter.

Throughout the year, as the information becomes available, the PT Minister will provide the CO with updates on the projected annual budget for the next Fiscal Year. At the conclusion of the PT budget process, the PT Minister will provide the CO with a written letter confirming the approved annual budget for the Service for the next Fiscal Year. This letter will also include any known changes to the projected annual budgets for the remainder of the Fiscal Years in the Plan (i.e., years two, three, etc).

If the RCMP requests increases to the approved budget, the CO will obtain approval from the PT Minister where possible prior to enacting such changes.

**FINANCIAL REPORTING:** The CO will provide financial reports to the PT Minister at mutually agreed times throughout the year. These reports will have a standardized format and will contain the following information:

- details of the year-to-date expenditures and forecasted expenditures for the remainder of the current Fiscal Year;

- explanations for any significant variances from the annual budget approved by the PT Minister; and
- proposed changes or updates to the Service's multi-year infrastructure and equipment plans.

The CO will provide the PT Minister with the following information in a standardized format by June 30 each year:

- accurate, detailed accounting of all actual expenditures for the Service; and
- explanations for any significant variances from the annual budget approved by the PT Minister.

Each Fiscal Year, the CO will also provide the PT Minister with a copy of the current Chart of Accounts. With reasonable notice, the CO will also provide any additional information that relates to financial implications on the Service.

**EQUIPMENT PURCHASING APPROVAL:** Equipment-Type A costing over \$150,000 requires the PT Minister's approval prior to its purchase. See Articles 11, 14, 15 and 18 for more information on Equipment-Type A. In practice, the RCMP will present a business case to the PT Minister seeking approval for Equipment-Type A purchases over \$150,000. A business case will provide sufficient information for the jurisdiction to make the necessary decisions and satisfy their funding requests. If required by the PT, the template found at the end of Article 18, CoDo pg. 208-209 could be used, keeping in mind that some PTs may require more information and others may require less. The level of information required will be confirmed between the Division and the PT representative.

**STRENGTHENING FINANCIAL EFFICIENCY AND ADMINISTRATION:** In addition to the other requirements of this Article, the contract parties will work together to strengthen the financial efficiency and administration of the Agreement. This may include developing and implementing ongoing initiatives to contain costs and improve long-term financial planning, with the goal of achieving greater predictability, efficiency and transparency when budgeting for future policing costs.

#### Article 19: Directed Reviews

**PURPOSE:** The purpose of Article 19 is to give PTs the ability to request in-depth reviews of a program or service in order to increase understanding, facilitate decision-making and improve accountability. The Article contains a provision that allows the contract parties to request that a matter be included in RCMP audit, evaluation, review plans, etc., and also describes the process for initiating and paying for Directed Reviews of the PT Police Service or activities undertaken in support of the Service.

**BACKGROUND:** In the 2012 Agreements, provisions on Directed Reviews (19 and 21.8) were included to strengthen accountability for financial management, and program and service delivery. These mechanisms are to help ensure that PT concerns about contract policing issues will be examined.

Article 19 refers to Directed Reviews relating to the PT Police Service, while subarticle 21.8 refers to Directed Reviews relating to RCMP Programs.

The mechanisms included under Article 19 and subarticle 21.8 are designed to minimize duplication and to utilize existing processes, if appropriate and desirable. As such, references in the Agreement to “departmental audit plan” are interpreted in the broadest sense; the term does not refer to a specific plan or report. “Departmental audit plan” includes any RCMP or federal government process related to audits, evaluations, reviews, etc.

A broad interpretation ensures that the ability to review RCMP Programs will be available to the PTs over the life of the Agreement, regardless of how the structure or processes of the RCMP and/or federal government may change in that time period, and regardless of whether the name and/or scope of specific plans change.

Federal legislation and policy requires federal departments to have an internal capacity to conduct both audits and evaluations. The RCMP Chief Audit and Evaluation Executive is responsible for: preparing multi-year audit and evaluation plans; updating these plans annually; conducting the reviews; and preparing an annual report for the Comptroller General of Canada.

The RCMP plans, known as the Risk Based Audit Plan (RBAP) and the Departmental Evaluation Plan (DEP), identify projects to be conducted over a three- and five-year period respectively. The plans are refreshed annually. Final decisions on the selection of projects for both the RBAP and DEP rest with the Commissioner.

Divisions engage in various processes that relate to Directed Reviews of the Service or activities undertaken in support of the Service. Some of these reviews are planned in advance and operate within an annual cycle, while others take place on an ad hoc basis in response to a specific incident or event.

#### INTERPRETATION

The Article contains distinct provisions for reviews that are nationally coordinated (19.1) and those that are locally coordinated (19.2).

**NATIONALLY COORDINATED:** Paragraph 19.1(a) provides CMC with a formal mechanism for proposing that an activity undertaken in support of one or more Service(s) be included in one of

the nationally coordinated review plans (e.g., RBAP, DEP or similar successor). For this to occur, CMC will make this request in writing to the RCMP.

In addition, each year the RCMP will provide CMC with a description of matters relating to any PT Police Service included in any of the nationally coordinated plans, including the current RBAP and DEP. This reporting requirement ensures contract jurisdictions are aware of planned reviews, thereby creating the opportunity for them to have input and minimizing the possibility of unknowingly duplicating a review. There is nothing in the Agreement to prevent an issue being reviewed simultaneously or subsequently under different review mechanisms; in certain circumstances, contract parties may determine this is the best means of obtaining the information required.

**LOCALLY COORDINATED:** Subarticle 19.2 describes the mechanism for the CO to consult with the PT when locally coordinated review plans are being developed and provides for the PT to have matters relating to the Service reviewed by the Division, or an Independent Reviewer.

A Directed Review is a thorough analysis that examines whether services and/or activities are relevant, effective, efficient, accountable and/or operating in compliance with applicable standards. A Directed Review can be conducted on any matter that is related to the Service or the delivery of policing services in the contract jurisdiction. It would be conducted at the Division level, by either the RCMP or an Independent Reviewer (defined in 19.2(e)).

The CO will consult with the PT Minister when the Division is developing review plans. To reduce duplication and fit within existing processes where appropriate and desirable, the RCMP will share existing plans and give the PT the opportunity to contribute to those plans.

The RCMP (or an Independent Reviewer if the PT so chooses) will conduct reviews requested by the PT unless it is not reasonably possible.

The subject matter, scope, timing and any other requirements of any review requested by the PT will be mutually agreed upon by the CO and PT Minister. Similarly, the extent of involvement of PT officials will be mutually agreed by the CO and the PT Minister.

At the PT Minister's request, a mutually agreed upon, independent third-party will be appointed to conduct the review. If the PT Minister does not specifically request that an Independent Reviewer be engaged, then RCMP staff will conduct the review.

Independent Reviewers are subject to the same RCMP internal protocols, procedures and practices with respect to the protection of information and security requirements as the RCMP itself. Independent Reviewers will be given access to the necessary information while ensuring that applicable laws and federal policies are not compromised.

If an Independent Reviewer is appointed at the request of the PT Minister, the PT will pay 100% of the costs of the Directed Review. The Independent Reviewer may be hired by the RCMP or by the PT.

All reports prepared as a result of a PT request under this Article will be provided to both the PT Minister and the CO as soon as completed.

#### Article 20\*: Bilateral Reviews

**PURPOSE:** Article 20 provides a review mechanism by which the parties may examine emerging issues or resolve issues as they arise, in relation to the specific implementation of the Agreement in a province or territory. It can also constitute a bilateral means to raise a concern, examine the issue and reach resolution, before and instead of using the formal Dispute provisions under Article 23.

**BACKGROUND:** Although the Agreements were negotiated collectively, each of the 11 contract jurisdictions has a bilateral Agreement entered into between Canada and the PT. Bilateral reviews were introduced in the 2012 Agreements to provide a more formal mechanism for addressing issues of concern to one province or territory in relation to the application or implementation of the Agreement in a specific province or territory. Bilateral reviews differ from Directed Reviews conducted under Articles 19 or 21 where the performance of a service delivered by the RCMP is the focus of the review.

**INTERPRETATION:** Public Safety Canada and a PT may engage in a bilateral review to address issues related to the application or implementation of the Agreements in a specific province or territory. The parties should consider conducting a bilateral review to resolve an issue before initiating a Dispute under Article 23, particularly in situations where fact-finding and research could be the key to untangling a disagreement.

Either the Federal or PT Minister may initiate the bilateral review process. The initiating party will notify the other party in writing, with full details of the issue it wishes to review. The party notified of the matter will reply in writing as soon as possible. The notified party may agree to the proposal to have the review or reply with a counter proposal, including written details.

Bilateral reviews may occur at any time during the term of the Agreement. The frequency, scope and subject matters to be reviewed are at the discretion of the two parties. Neither the PT nor Canada can propose that the cost-share arrangement (outlined in Articles 11 and 12) be the subject of a bilateral review unless the parties explicitly agree otherwise.

The outcome of a bilateral review could potentially be a change to the Agreement itself, or a change in policy or practice. Any changes would be assessed to determine their applicability to other PTs. Any amendments to the Agreement resulting from a bilateral review will not come

into effect until federal and PT ministerial approvals are obtained and agreement between the two parties is recorded in writing in accordance with Article 25.

#### Article 21\*: Contract Management Committee

**PURPOSE:** Article 21 establishes the principal terms for CMC to fulfill its governance role in relation to the Agreements. The Article stipulates CMC's structure and basic operative work, its mandate as well as the role of the various members of CMC: Public Safety Canada, the PTs, the RCMP and the Municipalities (as Associate Members). It also provides a mechanism for CMC to review RCMP Programs, either through consultation on nationally coordinated review plans or by conducting Directed Reviews.

**BACKGROUND:** CMC replaces the Contract Advisory Committee that was responsible under the 1992 Agreement for the implementation and operation of that Agreement. The change in terminology (management instead of advisory) reflects the strengthened governance and accountability of the contract parties. The contract parties committed to working together and to consult and collaborate with each other regarding substantive decisions affecting the quality and cost of the policing services.

CMC adopted Terms of Reference to further establish how CMC organizes itself, how meetings are conducted, as well as describing the support CMC receives through standing committees, working groups and the Secretariat.

Subarticle 21.8 contains new provisions for PTs to be consulted (through CMC) when nationally coordinated review plans are being developed for RCMP Programs, and provides a mechanism for CMC to request that a Directed Review of a RCMP Program be conducted. See the Background section of Article 19 in this document for more information on the addition of Directed Reviews to the 2012 Agreements as well as information on federal government review mechanisms.

#### Article 22\*: CMC Five Year Reviews

**PURPOSE:** Article 22 provides Canada and the PTs with a review mechanism to analyze the Agreements' financial and other significant provisions every five years. The Five-Year Review is the mechanism built into the Agreements to ensure they meet the evolving needs of the contract parties in order to remain current over the 20-year term.

**BACKGROUND:** The scope of Five-Year Reviews has been expanded in the 2012 Agreements to consider all substantive issues rather than simply cost items (as was the case under the 1992 Agreement). The 2012 Agreements eliminated most of the fixed rates in the 1992 Agreements in favour of recovery of actual costs via pre-determined formulae to ensure financial elements remain current over the twenty-year term of the Agreements. These formulae, as well as the

costs incurred for a given program or service, may be reviewed at the Five-Year Review. In addition, contract parties can now use the Five-Year Reviews to analyze existing or emerging program areas that could be improved or managed more efficiently.

**INTERPRETATION:** Every five years, a review of financial and other substantive issues related to the Agreements will be conducted. For a matter to be included in the Five-Year Review (the Review) it must involve more than one PT (otherwise, the bilateral review process may be used).

The Reviews will occur in the Fiscal Years 2016-2017, 2021-2022 and 2026-2027. Each Review will be finished by April 1 of 2017, 2022 and 2027 respectively.

Canada and any province or territory may propose matters for inclusion in the Review. All issues must be referred, with full written details, to CMC between 12 and 18 months before the date on which the Reviews are to be completed, unless the parties agree otherwise. CMC will determine which issues will be included in the Review by April 1 of the year the Review takes place (i.e., 2016, 2021 and 2026), and no other issues will be included after that date unless the parties agree otherwise.

The costs incurred by Canada as determined in accordance with Article 11 and Article 12 may only be reviewed during a Five-Year Review. This includes items that are included or excluded from the cost base (i.e., what comprises the basket of goods). Neither Canada nor a PT can propose that the cost-share arrangement (as outlined in subarticles 11.1 and 12.1) be the subject of a Five-Year Review unless Canada and the PTs explicitly agree otherwise.

The results of the Review and any recommendations made by CMC will be provided to the Federal and PT Deputy Ministers for their review and consideration as soon as possible after the completion of the Review.

Any amendments resulting from the Review will not come into effect until Federal and PT Ministerial approvals are obtained and agreement is recorded in writing in accordance with Article 25. Since each Agreement is a bilateral agreement between Canada and a PT, the possibility exists that not all PTs will adopt all (or any) of any amendments proposed as a result of a Five-Year Review.

#### Appendix A\*: Application of the Municipal Police Service Agreement

The Municipal Police Service Agreement (MPSA) is a flow through of the Provincial Police Service Agreement (PPSA), in that it mirrors the terms and operating procedures of the PPSA. PTs were responsible for negotiating the 2012 PPSA, and through consultation with Municipalities, took a lead role in negotiating the MPSA, to maintain the consistency of provincial, territorial, and municipal RCMP contract policing services.

This Appendix does not apply to the territories or Newfoundland and Labrador, which do not have municipal agreements, or to British Columbia which will have its own Municipal Companion Document due to the different contractual relationship British Columbia has with its Municipalities.

Policing is recognized, constitutionally, as a PT responsibility, delegated to Municipalities by way of provincial legislation. Orders in Council of provincial governments are required to authorize Municipalities to enter into RCMP MPSAs with Canada.

The Companion Document is the interpretation guide to the PPSA, and by extension, the MPSA. The agreements are, by and large, interchangeable with respect to interpretation and application.

The purpose of this Appendix is to provide a crosswalk between the interpretation and application of the PPSA and the MPSA.

#### MPSA ARTICLE 1: INTERPRETATION

Most terms defined in Article 1 of the MPSA have the same definitions as in the PPSA, with the exception of the specific terms “CEO”, “Furnished”, “Member in Charge”, “Parties”, “Provincial Police Service”, “Provincial Police Service Agreement”, and “Support Staff”, which have definitions unique to the MPSA.

#### MPSA ARTICLE 2: PURPOSE AND SCOPE

Clauses under MPSA Article 2 are interchangeable with Article 2 of the PPSA, with the exception of the following clauses that are MPSA specific:

##### PARAGRAPH 2.1.C - ANNEX “A”

The MPSA is silent on the issue of maintaining a listing of Members and Support Staff assigned to the Municipal Police Service, referred to as Annex “A” within the PPSA. The process provided under PPSA paragraph 2.1.c.1 provides a guideline for application to the MPSA, whereby the Municipality, Canada, and RCMP maintain an a listing of all Members and support staff assigned to the Municipal Police Service.

##### PARAGRAPH 2.2.C - MUNICIPAL BY-LAWS

Municipal by-laws are included as duties of the Municipal Police Service, in conjunction with the other demands for enforcement services within the Municipality, by the RCMP Municipal Police Service. Enforcement of municipal by-laws by the Municipal Police Service is generally limited to those by-laws which are law enforcement related. For example, municipal speed by-laws,

noise by-laws as it relates to unruly parties would be enforced; Barking dog by-laws or development permit inspections would not be enforced by RCMP.

This provision should be cross referenced to MPSA Articles 6.1 and 7.1, whereby the Municipal Police Service acts under the direction of the CEO/Mayor, and implements the objectives, priorities and goals as determined by the CEO/Mayor. In addition, many Municipalities opt to employ community peace officers or by-law enforcement officers to work in conjunction with the RCMP Municipal Police Service to provide effective law enforcement.

#### SUBARTICLES 2.4 TO 2.6 - SUPPORT STAFF

Municipalities are responsible for providing municipal support staff at 100% cost.

#### MPSA ARTICLE 4: EXCLUSIONS AND INCLUSIONS

This Article pertains to exclusions or inclusions of duties or functions of the Municipal Police Service, whereas PPSA Article 4 also addresses inclusions and exclusions of geographic areas.

Of note, when a Municipality that has previously received RCMP Provincial Police Services establishes an RCMP Municipal Police Service, a notice of geographic exclusion is not required from the PT, but is inherent, since the MPSA automatically excludes the municipality's geographic area from the PPSA.

#### MPSA ARTICLE 5: INCREASE OR REDUCTION IN THE MUNICIPAL POLICE SERVICE

All clauses under MPSA Article 5 are interchangeable with Article 5 of the PPSA. The PPSA Article also includes the process for an increase or reduction in divisional and regional administration positions.

#### SUBARTICLE 5.5. – NO REPLACEMENT OF MEMBERS

Where vacancies arise due to Members attending a training course related to the Municipal Police Service, on annual leave, or when ill except where the illness results in a Member's absence for a period of more than 30 consecutive days, Members will not be replaced.

#### Cross reference MPSA Paragraphs 8.1.e and f

Where municipalities experience sick leave vacancies beyond 30 consecutive days, the RCMP will report on all vacancies, and positions staffed, surplus to establishment. The Municipality may also discuss options with the RCMP to staff these positions, surplus to establishment, to maintain adequate service delivery levels.

As of the time of writing of this document, the RCMP is in the process of modernizing health services, which includes enhancements to sick leave management.

#### Subarticle 7.3 - Staffing of Detachment Commander

Of note is the requirement for the CO to consult and engage the CEO/Mayor in the staffing of the Detachment Commander position.

#### MPSA ARTICLE 9: EMERGENCIES AND EVENTS

The CO or the PT Minister hold the responsibility to invoke an Emergency in the province. Generally, the RCMP resources located within a province are redeployed first, to respond to an Emergency within the province. If additional resources are required, the PT Minister will make the request to the CO to temporarily increase the strength of the PT Police Service to respond to the Emergency. If the Emergency occurs within a Municipal Police Service jurisdiction, the province is responsible for invoking the Emergency, pursuant to the PPSA, and will work with the Municipality to respond to the Emergency.

Municipalities will be consulted prior to the redeployment of up to 10% of their membership to respond to an Emergency in provincial or federal jurisdiction, a Special Event (in a provincial jurisdiction) or a federal Major Event (e.g., Olympics, G-8 or G-20 meeting). Withdrawal or redeployment of members from the Municipal Police Service will not extend beyond 30 days, without further consultation between the CO, the PT Minister, and the CEO/Mayor. The Municipality will not be charged for Salary and incremental costs of the Members and/or equipment redeployed to respond to an Emergency, provincial Special Event or federal Major Event.

Municipalities, in conjunction with Detachment RCMP, are responsible for the planning and policing of Special Events held in their jurisdictions.

#### MPSA ARTICLE 10: MUNICIPAL POPULATIONS

All clauses under MPSA Article 10 are interchangeable with Article 10 of the PPSA. There is a new provision in the 2012 PPSA. If the PT Minister requests, and at no additional cost to Canada, the PT Police Service may be utilized to police a Municipality with a population of 5,000 or more. Under this provision, the PT would pay the 100% municipal cost of accommodations, Support Staff, and overtime, and determine degree of cost recovery, if any, with the Municipality.

This option is not applicable to Alberta or Saskatchewan, as it is not consistent with their Police Acts and provincial policing policies.

#### MPSA ARTICLE 11: BASIS OF CALCULATION OF PAYMENT

Clauses under MPSA Article 11 are interchangeable with Article 11 of the PPSA, with the exception of the following items, which are MPSA specific.

- Subarticles 11.4 and 11.5 itemize cost calculations for Municipalities with population 5,000 to 14,999, and with populations 15,000 and over, respectively.
- Municipal Under [population 15,000] Non Pooled Costs – The majority of costs for all Municipalities within a Division with a population under 15,000 are pooled together and divided over the total FTE Utilization of Members in the respective Municipal Police Services. This allows the smaller Municipalities to share RCMP policing costs by paying an average per FTE cost based on all collective expenditures.
- The Agreements broadly specifies which costs are payable by the municipality at the cost-share (70/30) and which ones are payable at 100%. A matrix called Municipal Under (population 15,000) Non Pooled Costs provides more detailed information about which specific MPSA costs are charged at 70% and which are charged at 100%. The matrix is prepared by RCMP and approved by the Finance and Cost Containment Standing Committee. Items charged at 100% under the 2012 MPSA include member overtime, administrative support staff, and providing and maintaining accommodations, including furniture and fixtures.
- Revised MPSA 2012 100% cost items include:
  - Guards and Matrons (includes Corps of Commissionaires contracts for guarding prisoners) - Under the 1992 MPSA, costs for guarding prisoners were included in the per capita rate. Under the 2012 MPSA, these costs are billed at 100% to the Municipalities. The rationale for the cost adjustment is that Municipalities who provide municipal accommodations, including cellblocks, are responsible for 100% of the costs of guarding prisoners. The same costing model is being applied to MPSAs operating out of federally-owned accommodations.
  - Payment in Lieu of Taxes (PILT) - PILT became billable under the 2012 MPSA, where the Municipal Police Service operates out of a federally-owned building.

#### MPSA ARTICLE 12: ACCOMMODATIONS

##### SUBARTICLE 12.1

Municipalities with a population of 5,000 or more are responsible for providing a Municipal Police Service, and for providing and maintaining accommodations for their Municipal Police Service, at no cost to Canada. Whether providing their own accommodations or occupying federal government Detachment facilities, Municipalities with MPSAs are responsible for 100% of the costs of providing and maintaining these accommodations, including furnished office

space, cellblock facilities, and garage space. The Municipality is also required to pay 100% for operating and maintenance costs.

These costs are calculated based on the proportion of the facility that is occupied by the Municipal Police Service (MPSA subarticle 12.4.a.).

#### SUBARTICLES 12.2 AND 12.3 – ACCOMMODATIONS STANDARDS

Accommodations Charge - Under the 1992 MPSA, Municipalities with Municipal Police Services operating out of federally-owned accommodations were billed an indirect accommodations charge of \$107.64 per square metre. Under the 2012 MPSA, Municipalities in federally-owned buildings will pay an annual per square meter rental rate which will be based on the actual costs incurred as part of the accommodations program of works in that province. This cost has been excluded from the per capita rate and is billed at 100% by location to Municipalities, based on the proportion of accommodations occupied by the Municipal Police Unit.

Under the 1992 MPSA, for federally-owned buildings, the costs for major and minor capital over \$30,000 were the responsibility of Canada. This was known as the \$30K rule. Under the 2012 PPSA and MPSA, the \$30K rule has been eliminated and all costs for major and minor capital are included in the accommodations program of works and thus billable to PTs and Municipalities under the Accommodations Program Charge. The amount charged to Municipalities is at 100% by location, based on the proportion of accommodations occupied by the Municipal Unit.

*\*\*Note PPSA Article 13 – Removal of Buildings and Living Quarters and Transfer of Buildings, Living Quarters, and Land – is not applicable to Municipalities.*

#### MPSA ARTICLE 15: JAILS AND LOCK-UPS

All clauses under MPSA Article 15 are interchangeable with Article 16 of the PPSA.

Municipal costs associated with jails and lock ups are at 100% since it is a municipal responsibility, under provincial Police Acts, to provide accommodations, including cellblocks.

#### MPSA ARTICLE 18: OPERATIONAL EFFECTIVENESS ASSESSMENTS

This provision is new to the 2012 MPSA. This Article provides for a review mechanism for matters arising out of the service delivery of the Municipal Police Service. It is not intended to be used for a formal review of a substantive article of the MPSA. Such matters are to be referred to the PT and/or CMC. (See Articles 19, 20 and 21.)

Matters such as the use of the Municipal Police Service to conduct specific by-law enforcement, or determining effective resourcing of the Municipal Police Service are applicable examples for an operational effectiveness assessment. In practice, in addition to the Detachment Commander, the CO would also be engaged in these assessments, utilizing administrative units such as Client Services or the Criminal Operations Policy Centre to assist in undertaking the assessment and addressing the issue giving rise to the review.

#### MPSA ARTICLE 19: CONTRACT MANAGEMENT COMMITTEE

All clauses under MPSA Article 19 are interchangeable with Article 21 of the PPSA.

This Article also references the Five-Year Review process, which is interchangeable with Article 22 of the PPSA. While the Municipalities have no direct role in the Five-Year Review process, they will be engaged through CMC, and through consultation with their respective PT.

#### APPENDIX B\*: CONTRACT MANAGEMENT COMMITTEE TERMS OF REFERENCE ESTABLISHING AUTHORITY

In 2011 and 2012, Federal, Provincial and Territorial (FPT) Ministers responsible for Justice and Public Safety (except for Quebec and Ontario) approved the 2012-2032 Police Service Agreements (PSAs). The PSAs, effective April 1, 2012, address key issues, including the importance of building and maintaining strong collaborative relationships, as well as modernized governance, accountability, program sustainability and cost containment.

Article 21 of the PSAs outlines the role, structure and mandate of the Contract Management Committee (CMC), as a principal means through which governance of the PSAs would occur.

#### MANDATE

The objective of the CMC is to bring focus and strong collaboration to the management of the PSAs by actively engaging Canada and the provinces, territories and municipalities to ensure that contract policing remains current and responsive to evolving policing requirements and innovative approaches to policing within the terms of the contract. As a steering committee, CMC will be focused on monitoring progress and providing strategic advice on matters of interest and on the resolution of issues related to the PSAs and contract policing in order to guide the effective management of the PSAs.

The mandate of the CMC is to:

- support the delivery of professional, efficient and effective police services under the PSAs;
- implement the modernized governance relationship envisioned in the *Introduction* of the PSA, built on meaningful engagement and responsiveness to each other's needs; and

- function as an information sharing forum to foster timely consultation and collaboration on issues affecting the governance, cost and quality of police services or a RCMP program, prior to decisions being taken.

#### MEMBERSHIP

The CMC is comprised of FPT Assistant Deputy Ministers, or equivalent, responsible for policing and/or public safety. In total, there are 13 CMC members: one representative from each province and territory with which Canada has a PSA, one from Public Safety Canada and one from the RCMP.

The CMC is co-chaired by the federal Assistant Deputy Minister from Public Safety Canada (Law Enforcement and Policing Branch) and a provincial or territorial (PT) ADM responsible for policing and/or public safety, with the latter chosen by agreement among PT jurisdictions. The incumbency of the PT Co-chair will be rotated every three to five years, or as otherwise agreed by the PTs and communicated to the CMC as of April 1 each year.

The RCMP representative on the CMC is the Deputy Commissioner responsible for Contract Policing.

In addition to regular CMC members, one associate membership position is extended to each province where municipalities receive RCMP municipal policing under agreements with Canada. The Assistant Deputy Ministers responsible for policing and/or public safety in these jurisdictions may each designate one associate member who will represent all municipalities in the province.

## RCMP Policy

### Incident Management Intervention Model (IMIM)<sup>217</sup>

This model and its description constitute the RCMP's evaluation tool used by their officers to assess risk and response. It was referred to on page 82 of this report in the context of the discussion of multi-officer response to high-risk calls for service. Similar models are used by all police agencies.

<sup>217</sup> RCMP. Incident Management/Intervention Model, 2021-05-05. <https://www.rcmp-grc.gc.ca/en/incident-management-intervention-model-imim>. Online July 23, 2021.

### Incident Management Intervention Model<sup>218</sup>

The visual representation of the Incident Management Intervention Model is a concentric layered wheel that represents the rapidly evolving and dynamic nature of police work, as well as the continuous requirement on the police officer to evaluate the level of risk for the given situation.

At the centre is the police officer in the given situation, using the CAPRA (Clients, Acquire & Analyze, Partners, Response, and Assessment) problem solving model. The circle builds outwards helping the officer form a proper risk assessment.

The layers of the wheel from the center are:

1. **Situational Factors:** reflect that situational factors are continuously changing and affecting all of the events and actions of a given police intervention.
2. **Subject Behaviours:** subject behaviours progress, from the lowest level to the highest as follows;
  1. Cooperative
  2. Passive Resistant
  3. Active Resistant
  4. Assaultive
  5. Grievous Bodily Harm or Death
3. **Tactical Considerations & Repositioning:** is often available to a police officer in any given situation.
4. **Intervention Options:** intervention options blend from one to another as there are various levels of each, and their availability to be used can cross levels of "Subject Behaviour" given the totality of a situation. The intervention options depicted on the graphic are:
  1. Officer Presence: is the first police intervention, as an officer needs to be present to have impact on the given situation
  2. Communication: is always required, in different forms, throughout a police intervention.
  3. Physical Control: is broken down further into "Soft Physical Control" and "Hard Physical Control" depending on the subject behaviour.
  4. Intermediate Weapons: this intervention overlaps with "Physical Control". There are various levels and options available in this category.
  5. Lethal Force: this intervention overlaps with "Officer Presence," "Communication," "Physical Control Hard," and "Intermediate Weapons." "Lethal Force" aligns with when the subject behaviour is "Grievous Bodily Harm or Death."

---

<sup>218</sup> Ibid.

5. **Crisis Intervention & De-escalation:** CID is the goal of all police interactions, and is a tool available to a member throughout an interaction, regardless of the seriousness or risk.

The IMIM is a visual aid that helps officers picture an event and explain why they used the intervention methods they did. It's also helpful when an officer needs to clearly explain their actions in court. The model is also a teaching aid used for training officers.

In April 2021, the RCMP updated the Incident Management Intervention Model (IMIM) annual re-certification training as well as the IMIM graphic to place more emphasis on communication and crisis intervention and de-escalation. Crisis Intervention and De-escalation now surrounds the graphic, emphasizing de-escalation as the preferred result of any interaction. Crisis Intervention and De-escalation provides police with tools that can often be used instead of physical intervention options.

The graphic reflects the rapidly evolving and dynamic nature of police work. Unlike a continuum or linear pathway, the model doesn't lead the officer through a stepped progression of intervention options. The officer instead selects an appropriate option to control the situation, based on:

**Tactical considerations**

- low light
- presence of backup
- availability of cover
- distance from the subject

**The officer's perceptions**

- the size of the person
- weapons nearby
- previous encounters with the person
- the person's emotional state

**Situational factors**

- weather
- time of day
- location
- number of people present compared to number of police officers present

**Subject behavior**

- cooperative
- active or passive resistant
- assaultive
- grievous bodily harm or death

This information forms what is known as the officer's individual risk assessment.

Police officers are also trained to continually monitor risk during an interaction with the public as things can change very quickly. Police officers must always be ready to shift tactics.

**Explaining the intervention**

Police officers must also clearly explain what happened before, during and after the incident. This process is called "legal articulation."  
An officer's intervention is measured against what a reasonable, trained, prudent police officer would do faced with a similar set of circumstances.

### RCMP Backup Policy

The RCMP policy regarding backup is relevant to the issue of multi-officer response to high-risk calls for service.

H Division Operational Manual<sup>219</sup>

#### 16.9. Request for Back -Up

1. Policy
2. General
3. Member
4. Supervisor
5. District Commander/Delegate

(For information regarding this policy, contact GroupWise address Hdiv\_CrinnOps\_Reviewers.)

#### 1. Policy

- 1.1. "H" Division will ensure the health and safety of its member by providing back-up.
- 1.2. Back-up refers to an urgent response by on-duty or off -duty RCMP members and/or operational peace/police officers from other accredited law enforcement agencies. Back-up may be required in support of members of the RCMP before, during or after an incident.
  - 1.2.1. Back-up cannot be provided by RCMP community constables, auxiliary constables or summer students.
  - 1.3. Back-up will be required when responding to high risk incidents involving, but not limited to, domestic disputes, the potential for violence, armed suspects, emotionally disturbed individuals, or suspects fleeing the scene of a crime.

#### 2. General

- 2.1. Every member will render assistance to a request for back-up without unreasonable delay. An off -duty member who volunteers to be and is identified as back-up must ensure that he or she remains available to provide timely assistance upon request.
- 2.2. The requirement for back-up will be based on a risk assessment in accordance with the principles of the Incident Management and Intervention Model noted in National Headquarters OM 17.1. and as found in the Investigator's Toolbox (Public and Police Safety -Tools -Risk Assessment).
- 2.3. Where a member has determined that back-up is required, but may be delayed due to the response time, the member will continuously assess risk, applying necessary intervention to ensure public and police safety in accordance with the principles of the IMIM. Where practicable, the member will provide continuous updates to OCC and other responding members.

H Division Operational Manual - Infoweb Page 2 of 2

- 2.3.1. If there is an obvious or perceived danger requiring immediate intervention, the member must take appropriate action to prevent grievous bodily harm or death to himself/herself or another person.

<sup>219</sup> RCMP. H Division Operational Manual, 16.9 Request for Back-Up. Author. (GOC00000060\_0001).

### 3. Member

3.1. When dealing with an incident involving a heightened potential for violence, perform a risk assessment as outlined in 2.2.

3.2. If the assessment identifies high risk incidents, call for back-up.

3.3. Continually assess risk and apply the necessary intervention to ensure public and police safety in accordance with the principles of IMIM, e.g., establishing officer presence, verbal intervention, tactical repositioning.

3.4. Notify your supervisor of the ongoing situation if circumstances dictate.

### 4. Supervisor

4.1. Ensure that shift members and the OCC are advised of identified back-up personnel and their contact information.

4.2. When notified of situations where back-up is required, assess the situation, request additional resources as required and monitor as necessary.

### 5. District Commander/Delegate

5.1. As required, schedule members for back-up duty.

5.2. In consultation with your Health and Safety Committee, develop a back-up plan unit supplement that includes a risk assessment process.

5.3. Ensure all members under your command are familiar with their responsibilities for providing assistance if called for back-up.

5.4. Ensure that all members are familiar with national, divisional and unit supplement policies relating to health and safety and back-up.

5.5. When additional or specialized resources from outside the district are necessary to ensure public and police safety, request support as per policy.

Date Modified: 2007-11-01

OM - ch. 16.9. Backup

Directive Amended: 2016-04-15

For information regarding this policy, contact Operational Policy and Compliance, National Criminal Operations, Contract and Indigenous Policing.

#### 1. General

#### 2. Definition

#### 3. Roles and Responsibilities

#### 4. Unit Backup Plan

#### 1. General

1. 1. To maximize public and police safety, resources must be in place to provide readily available backup and, where appropriate, multiple member responses.

1. 2. Appropriate response for backup and resource requirements will be determined by a unit risk assessment as outlined in sec. 3.4. See Backup - Unit Plan, Form 6305.

<sup>220</sup> RCMP. Operational Manual- ch. 16.9 Backup. Author. (GOC0000029\_0001).

1. 3. The unit backup plan, as outlined in sec. 4., is intended primarily for first responder units. NOTE: Units which do not provide first responder service may, at the discretion of the CO and based on the unit risk assessment, be exempt from developing a unit backup plan.

1. 4. This chapter must be read with an understanding of Part II, Canada Labour Code, the duties it places on employers and employees, and ch. 17.1. 1. 5. The following occurrences require a multiple member response:

1. 5. 1. calls of violence, or where violence is anticipated;

1. 5. 2. a domestic dispute;

1. 5. 3. an occurrence involving the use, display or threatened use of a weapon;

1. 5. 4. an occurrence involving a subject who poses a threat to himself/herself or others;

1. 5. 5. radio communication deficient locations where there is potential risk to the police or public (see sec. 2.3.); or

1. 5. 6. any occurrence or situation where members believe, based on their risk assessment, that they require a multiple member response.

1. 6. The multiple member response strategy does not preclude members from taking action before the arrival of assistance based on his/her risk assessment and the Incident Management Intervention Model (IMIM), e.g. imminent risk of grievous bodily harm or death presented during a domestic dispute.

## 2. Definitions

2. 1. Backup means an urgent, unplanned response to an incident in support of a member by one or more of the following:

2. 1. 1. other operational members, or

2. 1. 2. operational peace officers from other provincially accredited or recognized police services.

NOTE: Band Constables, Auxiliary Constables, or summer students cannot provide backup. Backup should not be confused with assistance, which may be provided by anyone, in an emergency situation, as governed by Sec. 25, CC, or the general assistance required in a non-emergency situation, e.g. directing traffic at a scene.

2. 1. 3. RCMP Community Constables may be used as backup based on the needs of the communities and a completed risk assessment.

2. 2. Multiple member response means a planned response by more than one member to an incident or situation. See sec. 2.1.1. and sec. 2.1.2. 2. 3. Radio communication deficient locations mean places where two-way radio communication between portable radios, portable radios and police motor vehicles, and portable radios and the detachment base station/OCC is not possible due to ongoing and consistent radio interference or signal weakness at that location.

## 3. Roles and Responsibilities

### 3. 1. Member

3. 1. 1. When responding to an incident, you must assess risk and formulate a response strategy in accordance with ch. 17.1. NOTE: Risk assessment is a continuous process and must evolve as situations change.

3. 1. 2. At any stage of an occurrence or situation, you may request backup based on your risk assessment.

3. 1. 3. When travelling to an area with known radio communication deficiencies, follow your divisional/unit Backup Plan.

3. 1. 4. Where you have determined that backup or a multiple member response is required, continuously assess risk and apply the necessary intervention to ensure public and police safety, e.g. tactical repositioning, establishing officer presence, verbal intervention.

3. 1. 5. Where practicable, provide continuous updates to the OCC and other responding members, and request they relay critical information to other responding members.

3. 1. 6. Treat all calls for backup as a priority.

### 3.2. Supervisor

3. 2. 1. Treat all calls for backup as a priority.

3. 2. 2. Continuously evaluate the skill of members under your supervision in the area of proper IMIM risk assessment.

3. 2. 2. 1. Where appropriate, provide guidance and recommend IMIM training.

3. 2. 3. Ensure the unit backup plan is followed. See sec. 4. 3. 2. 4. Ensure radio communication deficient locations are identified and known to members.

### 3. 3. Dispatcher

3. 3. 1. Treat all calls for backup as a priority.

3. 3. 2. Dispatch multiple members when required as indicated in sec. 1.5. and sec. 3.1.4. 3. 3. 3. Ensure that you are familiar with, and have ready access to, each unit backup plan within your area of responsibility. See sec. 4. 3. 3. 4. Be familiar with radio communication deficient locations.

### 3. 4. Commander

3. 4. 1. In consultation with your local Health and Safety Committee or Safety Representative, conduct a unit risk assessment/backup plan (see Form 6305) by analyzing the following criteria:

3. 4. 1. 1. risks specific to the situational factors in your detachment area, e.g. high demand periods, high risk response requirements, severity of criminal activity, communication, geography, number of members available;

3. 4. 1. 2. the potential frequency of the risk occurring;

3. 4. 1. 3. the potential consequence of not mitigating the risks;

3. 4. 1. 4. the degree of risk which is acceptable given the situational factors;

3. 4. 1. 5. whether additional or alternate measures must be implemented to mitigate the risk, e.g. altered service delivery, relief members, satellite phone, other equipment;

3. 4. 1. 6. the remoteness of the location and/or restricted access;

3. 4. 1. 7. proximity to backup outside your unit, e.g. neighbouring detachments; and

3. 4. 1. 8. radio communication deficient locations.

3. 4. 2. Develop a unit backup plan as outlined in sec. 4., based on the unit risk assessment and submit it through channels in order to receive the CO's approval. Place a copy on the unit supplements.

- 3. 4. 3. Ensure members under your command understand their responsibilities in relation to the unit backup plan and that radio communication deficient locations are identified.
- 3. 4. 4. Ensure all employees under your command are aware of national, division and unit policy regarding backup and multiple member response.
- 3. 4. 5. Ensure your OCC has an updated version of your unit backup plan and any radio communication deficient location.
- 3. 4. 6. At minimum, annually review the unit backup plan or whenever your risk assessment identifies a need for a revision of the unit backup plan.

#### 4. Unit Backup Plan

##### 4. 1. The unit backup plan will:

- 4. 1. 1. reflect the requirements of the unit risk assessment, and
- 4. 1. 2. provide for readily available backup for any member required to respond to calls for service by ensuring that:
  - 4. 1. 2. 1. radio communication deficient locations are identified;
  - 4. 1. 2. 2. a minimum of two members are available to respond to calls at all times where there is potential risk to the police or public;
  - 4. 1. 2. 3. if the risk assessment requires it, shifts of two or more members are established;
  - 4. 1. 2. 4. at least two members are on call whenever the service requirements justify;
  - 4. 1. 2. 5. as indicated in sec. 1.5., multiple member response is provided where required;
  - 4. 1. 2. 6. members on call are compensated and have all necessary equipment and transportation to respond immediately to a call for backup, e.g. overnight custody of police transport; and
  - 4. 1. 2. 7. supervision is readily available for consultation, e.g. radio room NCO, on shift/on call duty NCO, neighbouring detachment/district.
- 4. 2. The CO must ensure that every unit has an approved unit backup plan.

**BACKUP - UNIT PLAN**

PROTECTED B once completed

Detachment/Unit	Division	Collator Code	Date
-----------------	----------	---------------	------

**INSTRUCTIONS**

**PART A - CONSTANT SITUATIONAL FACTORS** **PAGE 2**

- Complete the Constant Situational Factors.
- Cite the data source when applicable.
- Use the Comment/Description column to describe the operational environment of the situational factor.
- Add as many situational factors as needed.

**PART B - VARIABLE SITUATIONAL FACTORS** **PAGE 4**

- Complete the Variable Situational Factors.
- Cite the data source when applicable.
- Use the Comment/Description column to describe the operational environment of the situational factor.
- Add as many situational factors as needed.

**PART C - RISK IDENTIFICATION WORKSHEET** **PAGE 5**

- Complete the Risk Description first
- Some risk(s) have been pre-identified. If they are applicable to your detachment, amend the impact statement as appropriate.
- Add risks as needed.

**Impact** - means the effect of an event on the organization's objectives.

When assessing the impact of a risk, at a minimum, you should consider the potential effect on human and financial resources as well as the reputation of the organization. Other criteria that may be useful to consider include the effect on operational capability, legal ramifications, and environmental impact.

Estimation	Description	Indicators - Threats	Indicators - Opportunities
High	Significant impact	Consequence(s) would be difficult/costly to repair, if repairable. Serious loss of partner/stakeholder/public trust.	Opportunity represents a key component in the achievement of the objective or priority. Important strengthening of partner/stakeholder/public trust.
Medium	Moderate impact	Consequence(s) would require some effort/investment to repair. Some loss of partner/stakeholder/public trust.	Opportunity would make some contribution to the achievement of the objective or priority. Some strengthening of partner/stakeholder/public trust.
Low	Very little impact	Consequence(s) would require minimal effort/expense to repair, if any. Minor setback in building partner/stakeholder/public trust, if any.	Opportunity would have a minimal effect in the achievement of the objective or priority, if any. Minor strengthening of partner/stakeholder/public trust, if any.

**Likelihood** - means the potential or probability for the occurrence of an event.

When assessing the likelihood of a risk, you must decide on a time frame. Short-term plans or objectives may only require the consideration of the next 12-24 months, or even less. Similarly, long-term plans may require the assessment of risks over a much longer period. You must clearly indicate the time frame under consideration when completing the likelihood assessment.

Estimation	Description	Indicators - Threats	Indicators - Opportunities
High	Probable - likely to occur (> 75%)	Potential of event occurring several times within X months. Has occurred recently.	Clear opportunity which can be achieved within X months with reasonable certainty.
Medium	Possible - may occur (10% - 75%)	Could occur at least once within X months. There is a history of occurrence.	Opportunity which may be achievable within X months.
Low	Remote - not likely to occur (< 10%)	Unlikely to occur. Event has not occurred.	Opportunity for which the likelihood of success is low.

**Risk Response/Backup Plan**

- Risk Indicators are an early warning that risk is starting to materialize and the response strategy should be evaluated to determine if it is effective.
- List the risks you cannot tolerate, describe your planned response to the risk and develop one or two key risk indicators.

**Rating**

- Fill in impact & likelihood columns with Low/Med/High
- Rating column is auto-filled once impact & likelihood is filled
- If rating column is over 3, risk response category becomes mandatory.

RISK RATING				
I M P A C T	High	6	8	9
	Medium	3	5	7
	Low	1	2	4
LIKELIHOOD				
	Low	Medium	High	

**PART D - RISK RESPONSE/BACKUP PLAN SUMMARY FOR ELEVATED RISKS** **PAGE 7**

- Risks that cannot be mitigated in section C must be clearly identified and forwarded to your supervisor for review and approval. This could include additional resources, equipment, schedule changes.
- If mitigation responses identified require an increase in human resources (Full Time Equivalent regular member positions). Consult with your Advisory NCO.

**PART E - APPROVALS** **PAGE 7**

- Approval signature from the Detachment Commander, the Advisory NCO, the Officer District/Line and the Commanding Officer.

## NS DOJ Policing Standards

The following is a sample of the Nova Scotia Policing Standards, and the Police Governance Standards.

### **Chapter 22<sup>221</sup>**

#### **PATROL**

*Standards in this chapter relate to the organization, administration, and operations of the patrol component of a police department.*

*The word patrol is used herein in its broadest sense. It is considered to be a primary law enforcement function and embraces much more than the act of patrolling. It is defined as a generalized function in which officers engage in a wide variety of activities.*

*The standards emphasize administrative considerations such as the organization, assignments, scheduling, and effective use of patrol resources, as well as actual operational practice.*

#### **22.1 Organization and Administration**

**22.1.1** *A written directive establishes the functions of the patrol component.*

*Comments: A clear definition of function enables officers to know what actions are in concert with department policy and thus facilitates the delivery of services to the community. It is suggested, however, that the responsibilities be described for at least the major job tasks in the patrol force, which may include: (1) preventive patrol; (2) crime prevention activities; (3) called-for services; (4) investigation of crimes; (5) traffic control; (6) maintenance of public order; (7) provision of emergency services; (8) development of relationships between citizens and the department; and (9) reporting of information to appropriate organizational components. (M M M)<sup>222</sup>*

**22.1.2** *A written directive establishes procedures for communication, coordination, and cooperation between patrol and other department components.*

*Comments: The patrol component should encourage and support the exchange of information with specialized and support components for the purpose of coordinating performance. (M M M)*

<sup>221</sup> Nova Scotia. Policing Standards. [https://novascotia.ca/just/Policing\\_Services/\\_standards/Patrol.pdf](https://novascotia.ca/just/Policing_Services/_standards/Patrol.pdf). Online 19 Aug 21.

<sup>222</sup> While this notation is present in the standard, it is not defined.

22.1.3 Law enforcement response to emergencies is available 24 hours a day everyday of the week within the department's service area.

*Comments: The Intent of this standard is to provide the community with basic law enforcement services. Members of the public should be able to contact a police department at any time and receive immediate response to emergency situations. (M M M)*

22.1.4 In those departments maintaining 24-hour coverage, procedures for shift change provide for continuous patrol coverage.

*Comments: To provide patrol coverage at all times, shift changes should be staggered. (M M M)*

22.1.5 If the department has any special-purpose vehicles, aircraft, or boats, a written directive governs their operation and includes the following provisions:

- a statement of the objectives of their operation or usage;
- instructions, conditions, and limitations of usage;
- authorization for use in various situations;
- qualifications and training for personnel assigned to operate the vehicle, aircraft or boat;
- designation of person or position responsible for the condition and maintenance of the vehicle, aircraft or boat;
- a listing of equipment, if any to be kept in or on the vehicle, aircraft or boat; and
- a listing of persons or positions authorized to operate the vehicle, aircraft or boat and its equipment.

*Comments: The Intent of this standard is to establish guidelines for the operation of all special-purpose vehicles, aircraft or boats utilized by the department. (M M M)*

22.1.6 A written directive designates the methods used for identifying officers during radio transmissions.

*Comments: The Intent of this standard is to encourage identification systems based on assignment numbers. (M M M)*

22.1.7 A written directive specifies the procedure for radio communication with interacting departments.

MCC

Structure of Policing in Nova Scotia

MacKnight

*Comments: A uniform code facilitates communication, cooperation, and coordination among different departments operating within the same general area. (M M M)*

**22.1.8** *If the department uses motorcycles, horses or dogs, a written directive specifies the criteria for their deployment.*

*Comments: The purpose of this written standard is to ensure that motorcycles, horses, or dogs are deployed appropriately.*

**22.1.9** *If the department has a system for receiving specified crime and Incident report Information by telephone or through the mail, a written directive specifies the criteria for acceptance.*

*Comments: The Intent of this standard Is to Improve the use of patrol time. Some crime calls do not require the dispatch of a patrol officer and can be effectively handled by receiving Information In an alternative manner. (M M M)*

**22.1.10** *A written directive describes the circumstances that require the presence of a patrol supervisor at the scene for the purpose of assuming command.*

*Comments: Incidents of a serious nature often arise that require the presence of a supervisor who possesses the authority necessary to deal with the problem. (M M M)*

## **22.2 Operations**

**22.2.1** *A written directive establishes the categories of crimes and Incidents that should receive preliminary Investigation by patrol officers.*

*Comments: The single most Important determinant in solving a crime Is the information supplied by the victim or witnesses to the Immediately responding patrol officer. In general, patrol officers should conduct the preliminary investigation of most cases. In unusually serious or complex crimes, the preliminary investigation may be conducted by specialists. Investigation of certain other crimes may require the presence of Investigators in plain clothes during the initial investigation. The circumstances calling for early involvement of specialists should be clearly described by the department. (M M M)*

**22.2.2** *A written directive governs the conduct of follow-up Investigations by patrol officers.*

*Comments: The purpose of this standard is to increase the effectiveness of*

*patrol officers, to enhance their role, and to provide specialized investigators more time to concentrate on complex investigations. The directive should clearly specify which kinds of cases are referred to specialized Investigative components. (M M M)*

22.2.3 A written directive states that every uniformed officer engaged in a field assignment must have access to radio communications.

*Comments: The Intent of this standard is to ensure that on- duty uniformed officers have the means for radio communication. (M M M)*

22.2.4 A written directive establishes procedures for radio communications to and from patrol officers.

*Comments: Operations are more efficient and officer safety is enhanced when dispatchers and supervisors know the status of officers, their locations, the nature of cases. (M M M)*

22.2.5 A written directive governs pursuit of motor vehicles, to include:

- *evaluating the circumstances;*
- *Initiating officer's responsibilities;*
- *secondary unit's responsibilities;*
- *dispatchers responsibilities;*
- *supervisor's responsibilities';*
- *forcible stopping;*
- *when to terminate pursuit; and*
- *Inter- and Intra-jurisdictional pursuits.*

*Comments: The department must balance the necessity for pursuit or apprehension against the probability and severity of damage or injury that may result. When air units are available, they should be used to direct the movement of the initial pursuing units and any other ground units that may be involved. (M M M)*

22.2.6 A written directive establishes procedures for responding to routine, urgent, and emergency calls.

*Comments: The department should prioritize calls. These classifications should permit designation of the seriousness of the call. (M M M)*

22.2.7 Each vehicle used in routine or general patrol service must be equipped with at least the following equipment:

MCC

Structure of Policing in Nova Scotia

MacKnight

- *red and blue emergency lights;*
- *a siren;*
- *a mobile radio transceiver; and*
- *emergency equipment.*

*Comments: As an emergency vehicle, a patrol car should be equipped with these accessories to increase its effectiveness. Vehicles used for covert purposes do not have to meet this standard. (M M M)*

*22.2.8 A written directive requires the use of occupant safety restraining devices in department vehicles.*

*Comments: The use of seat belts is governed by the Motor Vehicle Act. (M M M)*

*22.2.9 Bulletproof vests are made available by departments to officers for hazardous or specialized duty.*

*Comments: A directive may specify circumstances when the wearing of body armour is mandatory. (M M M)*

*22.2.10 A written directive establishes procedures for notifying next-of-kin of deceased, seriously injured, or seriously ill persons.*

*Comments: The procedures should ensure that notifications are carried out promptly and in a considerate manner. (M M M)*

*22.2.11 A written directive establishes procedures for notifying the following:*

- *medical examiner/coroner;*
- *street/highway department;*
- *public utilities; and*
- *news media.*

*Comments: The written directive should specify the circumstances requiring notification and establish procedures to ensure that such notifications are promptly carried out. (M M M)*

Police Governance Standards  
Province of Nova Scotia

**013.00 VIOLENT CRIME LINKAGE ANALYSIS SYSTEM (ViCLAS)<sup>223</sup>**

013.01 Approved: February 19, 2007

013.02 The police agency is to have a written policy and operational procedure that outlines the requirements and procedures for completing and submitting ViCLAS booklets as required by the ViCLAS Regional Coordinator.

013.03 Operational or administrative policy and procedure approved by the police agency is to include and demonstrate:

(a) the criteria for the submission of the ViCLAS booklet

(b) the role and responsibility of the investigating officer requirement to prepare and submit a ViCLAS booklet

(c) the role and responsibility of the police agency Supervisor and/or Case Manager in the validation and submission of the ViCLAS booklets

(d) inclusion of all solved or unsolved homicides

(e) inclusion of attempts that are of a sexual or predatory in nature, or suspected of being part of a series

(f) inclusion of missing persons, where the circumstances indicate a possibility of foul play

(g) inclusion of unidentified human bodies, where the manner of death is known or suspected to be a homicide

(h) inclusion of all non parental abductions and attempted abductions

013.04 The police agency is to provide ViCLAS training for investigating officers as required.

013.05 The police agency is to maintain a record of all ViCLAS submissions as required.

## Press Release

The following press release provides context for the Additional Officer Program, which continues to provide funding for policing officer positions in Nova Scotia.

### Additional Officer Program Accelerated<sup>224</sup>

#### Justice

October 16, 2008 - 1:16 PM

Adding more police officers to keep Nova Scotia streets safe is making such a difference, the government will accelerate its additional officer program.

Justice Minister and Attorney General Cecil Clarke made the announcement today, Oct. 16, that 45 new officers, 25 more than originally planned, will be hired during the next year.

Collaborative policing has been effective in Nova Scotia in areas where RCMP and police agencies work together to target street crimes, drugs, and impaired drivers.

"People want to see more police officers on their streets and that's happening," said Mr. Clarke. "We know what's working well, so we are committing the resources to speed up the planning work to prevent crimes of concern to Nova Scotians."

So far, 150 provincially funded extra enforcement officers have been allocated to new programs that are proving successful. The additional officer program is part of the Crime Strategy, Time To Fight Crime Together, and its plan to have 250 new positions in Nova Scotia by 2011.

The positions are being funded in part by the federal government's \$11.2-million investment to increase enforcement. Planning for allocation of the positions has started. The positions will be filled beginning April 1, 2009.

Mr. Clarke said the announcement will represent \$4.9 million in the next provincial budget for targeted priorities including:

- new officers dedicated to street-crime units across Nova Scotia to address local crime issues
- expanding to Northern Nova Scotia the Integrated Impaired Driving Enforcement Unit that has had officers from the RCMP, Bridgewater and Kentville improve road safety in southwest Nova Scotia
- the province's two largest municipalities receiving the most resources in the latest allocation with four new positions in Halifax to combat the hot spots highlighted by the municipality and three new positions in Cape Breton Regional Municipality for its drug enforcement unit
- more officers across the province to invest in the safety of First Nations communities

Recommendations Relevant to the Mandate of the Mass Casualty Commission	414
6.10. Prince Edward Island	416
6.10.1. Inquest into the Deaths of Patricia Lynn Hennessey and Nash David Campbell (Prince Edward Island, 2015) .....	416
Recommendations Relevant to the Mandate of the Mass Casualty Commission	417
<b>7. APPENDIX: REPORTS IDENTIFIED IN THE ENVIRONMENTAL SCAN</b>	<b>418</b>

## 1. INTRODUCTION

This document brings together recommendations from previous reviews in Canada relating to the matters identified in the mandate of the Mass Casualty Commission. The scope of this scan includes reports of commissions of inquiry, reports of government standing committees, law reform commissions, government-commissioned evaluations and reviews, reports of the Civilian Review and Complaints Commission for the RCMP, and coroner's inquiries. Reports from public interest groups or think tanks are not included here, nor are reviews which do not contain recommendations.

The reviews are grouped according to the research structure developed by the Research & Policy team of the Mass Casualty Commission. Within each group, the reviews are listed in chronological order. Until the Commission completes its fact-finding process, the relevance of the recommendations has been determined on the basis of Foundational Documents and the Commission team's review of the information presently available to the Commission; the fact-finding process may yet contradict or refine this present understanding. Some recommendations have been included because although they do not address an issue directly relevant to the Commission's mandate, they address an analogous issue.

For each review, there is a brief summary of the background and mandate of the review, along with a list of the issues on which recommendations were made. The recommendations that are relevant to the Commission's mandate are set out. Edits to the original text of the recommendations have been made in a few cases, where necessary for clarity and conciseness. In some instances, information on the implementation of recommendations is included.

Each review is summarized once. However, many reviews relate to more than one matter within the Commission's mandate.

All citations are to the page of the report being summarized, except where otherwise indicated.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

### 2.1. Nova Scotia

The Order in Council directs the Mass Casualty Commission to examine “the responses of police, including the Royal Canadian Mounted Police (RCMP) and municipal police forces” ((a)(ii)) and “police operations, including operational tactics, response, decision-making and supervision” ((b)(iv)). This section focuses on reviews involving policing in Nova Scotia. Reference should also be made to the reports described in section 6 of this scan relating to gender-based and intimate partner violence policies in Nova Scotia.

---

#### 2.1.1. Royal Commission on the Donald Marshall Jr. Prosecution (1989)<sup>1</sup>

In 1971, Donald Marshall Jr., a 17-year-old Mi'kmaq<sup>2</sup> youth, and Sandy Seale, a 17-year-old Black youth, were walking through a park in Sydney, Nova Scotia when they met two men, Roy Ebsary and Jimmy MacNeil. Mr. Ebsary stabbed Mr. Seale and cut Mr. Marshall's arm. Seale later died. Mr. Ebsary had a reputation for violence and had a conviction on a weapons charge involving a knife. The Commissioners described the police conduct during the investigation as “entirely inadequate, incompetent and unprofessional.”<sup>3</sup> Due to their racist views of Indigenous people and opinions that Mr. Marshall was a troublemaker, police quickly decided, without evidence, that Mr. Marshall had stabbed Mr. Seale in the course of an argument. The investigators pressured teen witnesses into incriminating Mr. Marshall. The Crown prosecutor failed to disclose the witnesses' prior inconsistent statements. Mr. Marshall's defence lawyer failed to provide adequate representation, and the trial judge made legal errors (which were not raised before the Court of Appeal or identified by that court).

Ten days after Mr. Marshall was convicted of murder, Mr. MacNeil told police he had seen Mr. Ebsary stab Seale. The RCMP investigated Mr. MacNeil's statement at the request of the Sydney police and Attorney General, but their investigation was “incompetent and incomplete.”<sup>4</sup> The RCMP dismissed Mr. MacNeil's statement without interviewing him. His statement was not disclosed to Mr. Marshall's lawyer or to the Crown counsel handling his appeal, nor was a later report from Mr. Ebsary's daughter that she had seen him washing blood from his knife on the night of the murder. The wrongful conviction began to come to official attention only in 1981, after Mr. Marshall learned that Mr. Ebsary had admitted to killing Mr. Seale. The RCMP officers assigned to reinvestigate the case determined that Mr. Seale had been killed by Mr. Ebsary's knife. However, they pressured Mr. Marshall into saying, wrongly, that he and Mr. Seale had been attempting to rob Mr. Ebsary when the stabbing took place.

The federal Justice Minister referred the case to the Nova Scotia Court of Appeal and Mr. Marshall was released on bail in 1982, after spending 11 years in prison. The following year, the Nova Scotia Court of Appeal quashed Mr. Marshall's conviction and entered a verdict of acquittal. However, the Court of Appeal blamed Mr. Marshall for the conviction, stating that the murder took place in the course of an attempted robbery by Mr. Marshall, that Mr. Marshall had lied about the

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

robbery, and that his untruthfulness contributed to his conviction. Mr. Ebsary was eventually convicted of manslaughter.

The Royal Commission was appointed in 1986 and held 93 days of hearings. It concluded that “the criminal justice system failed Donald Mr. Marshall, Jr. at virtually every turn from his arrest and conviction in 1971 up to—and even beyond—his acquittal by the Supreme Court of Nova Scotia (Appeal Division) in 1983.”<sup>5</sup> The Commission found that the Court of Appeal made a “serious and fundamental error,” unsupported by any available evidence, when it concluded that Mr. Marshall was to blame for his conviction.<sup>6</sup>

The Commission also found that racism played a significant role in Mr. Marshall’s conviction, and made numerous recommendations to address anti-Indigenous and anti-Black racism in Nova Scotia’s criminal justice system and broader society. In order to determine how Mr. Marshall’s treatment differed from the treatment of other suspects, the Commission looked into RCMP investigations of two members of the Nova Scotia government and identified significant political interference in those investigations. This led the Commission to recommend the creation of the office of Director of Public Prosecutions, limiting the Attorney General’s ability to intervene in a prosecution.

The Commission made numerous findings regarding the conduct of the police during the investigation of Mr. Seale’s death and in the years following Mr. Marshall’s conviction. It concluded that in addition to racism, the investigation was affected by inadequate training and structural deficiencies. It found that many of the inadequacies of the initial investigation could be attributed at least in part to poor training and promotions that were based on seniority and “informal considerations” rather than merit.<sup>7</sup> It also noted that the RCMP re-investigation was in part responsible for bringing Mr. Marshall’s wrongful conviction to light.

The Commissioners noted the profoundly important role played by police agencies in Nova Scotia:

In a democratic, multicultural society committed to individual rights and civil liberties, and organized on the premise of equality of opportunity, the police have a profound and taxing responsibility to balance individual rights with society’s need for security.

Nova Scotians expect much of their police forces. Recent research, as well as work done for other Royal Commissions, indicates the public wants its police forces to exercise a wide mandate, to respond—and quickly—to calls for service, to solve crimes and be tough on criminals. At the same time—and equally important—Nova Scotians expect these functions to be carried out in an ethical way, with respect for the rights of the innocent, the accused and the victims. The police must be sensitive to racial, social and ethnic diversity, even-handed, principled and competent. If they fail to meet any of those expectations, of course, the criminal justice system may be brought into disrepute among the people it serves.<sup>8</sup>

The Report set out the significant improvements to policing that had been made in the 18 years between Mr. Marshall’s conviction and the Report’s publication in 1989, including recruitment, training, promotion, management, and oversight. However, it found that some deficiencies continued. For example, little training was provided to officers upon promotion. Further, the Commission concluded that training budgets continued to be inadequate and “in-service training

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

and regular programs of upgrading and certification are still woefully undeveloped.”<sup>9</sup> The Commission noted that despite significant improvements in investigation training for municipal police, more needed to be done to ensure a more uniform quality of investigative work across the province. This was particularly true in cases involving “juveniles and other persons deserving particular assistance.”<sup>10</sup>

The Commission expressed serious concern over the failure of other police officers or managers to question improprieties in the investigation. It noted that periodic review of investigations was standard practice in RCMP investigations and recommended it be implemented in municipal investigations. It also noted the need for improvements in the delivery of police services, despite limited resources:

Given the rising costs of police services, the growing demand for a wider range of quality police services and the stagnant tax base in many Nova Scotian municipalities, municipal police departments and their governing authorities must work to develop modes of cooperation to overcome their limited resources. We believe that the Province, through the Department of the Solicitor General, must carry through on announced intentions to examine the delivery of police services in Nova Scotia.<sup>11</sup>

It suggested that the province consider regionalizing policing to obtain a more effective and efficient policing service. Noting that several smaller municipalities had recently made decisions on whether to contract RCMP services or continue with local independent forces, mainly on the basis of cost, the Commissioners stated:

This is understandable, but affordability cannot be the only criterion in determining the kind of police force a municipality should have. We believe the Province has an obligation not only to establish minimum standards for policing, but also to provide municipalities with the resources to meet the implied financial obligations that go with such standards.<sup>12</sup>

The Commissioners also noted that the focus of municipal forces on responding quickly to local concerns can sideline the development of long-term plans and evaluating and auditing their performance. Municipal police departments should engage in more deliberative planning and monitor the successes and failures of those plans following implementation.<sup>13</sup>

It also outlined the differences in responsibility for the RCMP versus municipal forces, noting:

The RCMP is officially responsible to the Provincial Government under the Police Act and the Provincial Policing Agreement. In the municipal policing agreement the RCMP retains a significant degree of control, while at the same time the Police Act entrusts the municipality with the responsibility for the maintenance of law and order. Leaving aside the difficulties that could arise in a discussion of the legal status of policing agreements made under the Police Act, it is apparent that on a day-to-day basis, the RCMP has traditionally operated relatively autonomously in its relations with governing authorities in Nova Scotia.<sup>14</sup>

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

The Commissioners considered options for changing the structure of policing to provide more centralized control over policing. They concluded that there was no need for any radical change to the structure of policing in Nova Scotia (such as centralizing control over police forces). However, they concluded that more should be done to provide leadership and direction on policing policy, particularly through the Police Commission. The Report went on to address the governance of RCMP detachments in the province:

One special concern in the overall municipal and provincial policing partnership concerns the relationship of both levels of government to RCMP policing in the province. Lack of accountability of the RCMP to provincial and municipal authorities has led elsewhere to calls for a provincial police force. Both municipal authorities and the Province must become more forceful about defining the relationship. At our peer review workshop to discuss the police research (see Volume 2, Appendix I), RCMP officials from Ottawa invited such input: "Let the Province develop a plan and we'll respond." The Province should take up that challenge.<sup>15</sup>

The Commissioners also considered the role of the Police Review Board, which was created to determine public complaints about police officers and review issues relating to the discipline of police officers. The Commissioners said:

The 1985 amendments to the Police Act created a new Police Review Board to hear and determine public complaints and review matters of internal discipline against police officers. These amendments largely followed the recommendations of Judge Nathan Green in his 1981 report on the Police Act. Whether or not this new Board will be effective will depend on the ability of its members to be and be seen to be independent of both Government and the police community. This independence should be fostered by a clear separation between the Board and the Nova Scotia Police Commission. We understand that the Chairman of the Police Commission is to be the Registrar of the Board, the investigative branch of the Commission will conduct investigations for the Board, and the budget of the Board will be part of that Commission. While we have commented earlier on the desirability of the independence of the Commission itself, we believe that linking the Police Review Board to the Police Commission in the manner proposed will lessen the confidence of the public and the police in the Board. When dealing with individual complaints and the rights of individual police officers, it is essential that the adjudicative body not be perceived as being aligned with one side or the other. Even though the Police Commission may itself be independent, it is inevitable that it will be viewed as being management or police oriented, and hence neither a private complainant nor a disciplined officer may feel that he or she has been treated impartially. We believe that in its essential aspects the Police Review Board should be separate from and independent of the Nova Scotia Police Commission.<sup>16</sup>

The Commission also warned against the potential for personal interference by elected politicians in the governance of the police, noting the dominance of elected politicians on municipal bodies governing police.<sup>17</sup>

<sup>17</sup> "Report of the Royal Commission," Volume 1, Part 2, p. 259.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

**Recommendations Relevant to the Mandate of the Mass Casualty Commission**

- (Recommendation 15) We recommend that training for all police officers, both at the intake level and as continuing education, include content on police/minority concerns and sensitivity to visible minority issues.
- (Recommendation 28) We recommend that the RCMP and municipal police forces, where applicable, take immediate steps to recruit and hire Native constables.
- (Recommendation 47) We recommend that the Police Commission conduct regular assessments of the operations of each municipal police department in accordance with the provisions of the Police Act.
- (Recommendation 48) We recommend that the Solicitor General require the RCMP to provide information concerning RCMP operations in the province to the Police Commission on an ongoing basis so the Commission can develop and plan rational policing policy and an adequate police information system in the province.
- (Recommendation 49) We recommend that the Police Commission develop and maintain close liaison with officials in the Department of Municipal Affairs and the Executive of the Union of Nova Scotia Municipalities with a view to developing a more rational basis for provincial financial assistance for municipal policing services.
- (Recommendation 50) We recommend that the Police Commission not be absorbed into the mainline structure of the Solicitor General's Department to keep it relatively independent of political considerations and to better reflect the municipal-provincial partnership that characterizes the Nova Scotia organization of policing services.
- (Recommendation 51) We recommend the establishment within the Solicitor General's Department of an Executive Director (Policing) to reflect its increasing role in policing in the province.
- (Recommendation 52) We recommend that a regular annual meeting be held by the Police Commission with the chairs of all Nova Scotia boards of police commissioners. The purpose would be to provide a forum for information exchange, program development, and possible collaboration among municipal police departments in various matters from equipment to crime prevention.
- (Recommendation 53) We recommend that the Chairman of the Nova Scotia Police Commission not act as the Registrar of the Police Review Board and that the Nova Scotia Police Commission not provide investigative services to the Police Review Board.
- (Recommendation 58) We recommend that the Nova Scotia Police Commission take a strong leadership role in police/visible minority relations by providing useful materials to departments (comparable in quality to those now made available to its officers by the RCMP), arranging imaginative in-service training in conjunction with the Atlantic Police Academy or similar bodies, and assisting departments in the setting up of race relations liaison officers or committees.
- (Recommendation 59) We recommend that, together with the Nova Scotia Police Commission, municipal police departments and local boards of police commissioners develop imaginative outreach programs and liaison roles in order to provide visible minorities with greater access to and more positive interaction with the police.
- (Recommendation 60) We recommend that municipal police departments adopt as an objective the eradication in police departments of racial slurs and stereotyping and, in pursuit

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

of this objective, promulgate official policies and guidelines on stereotyping similar to those currently employed by the RCMP (RCMP Administration Manual 111.9) or the Metropolitan Toronto Police Force (standing order number 24).

- (Recommendation 61) We recommend that special attention be given to more intensive training for cadets whose first assignment will be in areas of high visible minority concentration. In addition, detachments and municipal police departments located in areas of high visible minority concentration should allocate proportionally more of their resources to multicultural and race relations training. The Police Commission should monitor detachment and municipal police department performance in this area.
- (Recommendation 62) We recommend that education and sensitivity training with respect to visible minorities be more pronounced in the cadet training curriculum and should be a component of regular in-service training.
- (Recommendation 63) We recommend that the Atlantic Police Academy be encouraged to continue to develop in-service programs and imaginative experimental initiatives for police/visible minority interaction.
- (Recommendation 68) We recommend that the Solicitor General's Task Force on Municipal Police Training, as well as the data collected as part of the Police Study for this Report, be used to establish an ongoing system for monitoring levels of training in the province. The system should be maintained by the Police Commission or equivalent body and should incorporate clear definitions of the types of training appropriate for the needs of particular members, departments and detachments.
- (Recommendation 69) We recommend that periodic assessment of municipal police department officers be carried out as in Nova Scotia's recently announced "force continuum program," which deals with the use of firearms and mace. Common standards should be developed for certification in these areas and consideration should be given to the inclusion of physical fitness and basic response/preliminary investigation imperatives.
- (Recommendation 70) We recommend that all constables be required to have basic investigative skills such as would be required to secure the crime scene and carry out proper preliminary recording and investigation.
- (Recommendation 71) We recommend that municipal police departments cooperate with the Police Commission to produce a uniform set of guidelines for investigative work.
- (Recommendation 72) We recommend that the Police Commission undertake a systematic evaluation of the investigative capacities available in all municipal police departments in the province. This evaluation should be coordinated with periodic reviews of the municipal police departments.
- (Recommendation 76) We recommend that it be standard practice in all police departments for superiors to review, with investigators, the progress of investigations of all serious offences.
- (Recommendation 77) We recommend that a joint task force be established by the Solicitor General and the Minister of Municipal Affairs, with representation from the other relevant bodies, to examine the organization and delivery of policing services within the province and in particular to consider and review the desirability and feasibility of some regionalization of existing municipal policing services in the province and to make recommendations to the Government on these matters. Such a review should also examine other less comprehensive collaborative arrangements which might beneficially be established or further developed

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

between existing municipal police forces and the RCMP to improve the quality and efficacy of the delivery of policing services in the province.

- (Recommendation 78) We recommend that all municipal police departments be able to deliver police services according to a set of minimum standards for policing in Nova Scotia. This set of standards should be developed by the Police Commission with appropriate input from both provincial (Solicitor General) and municipal (local police commissions) governing authorities. Recognizing that the primary responsibility for delivery of police services is with the municipalities and that it may be beyond the financial capability of some to upgrade their municipal police department according to these minimum standards, the Province must ensure that the municipal police departments have the resources to meet the prescribed standards.
- (Recommendation 81) We recommend that municipal police departments be encouraged to develop a code of ethics as positive guidelines for behavior. For purposes of continuity and consistency and for minimum standardization, such codes should be developed in consultation with the Atlantic Police Academy and the Police Commission.

---

### 2.1.2. Inquiry into Matters Relating to the Death of James Baily, Jr. (Nova Scotia Police Commission, 2005)<sup>18</sup>

James Bailey was a Cape Breton man who was known by his family to have substance use problems and to have experienced suicidal ideation. In May of 2000, he asked family members for assistance to get to a detox centre. However, there were no available beds. A family member called police and reported that Mr. Bailey was intoxicated and wanted to be picked up. Shortly thereafter, Mr. Bailey was arrested on the street under the Liquor Control Act for public intoxication and placed in custody. The officer who arrested him found a bottle of pills in Mr. Bailey's pocket. Mr. Bailey was placed in the recovery position on the cell bunk. The custodian in the police station did not physically check on him for more than two hours; she relied on the video monitor. Mr. Bailey died in his cell at some point during this period. The autopsy showed several narcotics and controlled pharmaceuticals in his system, two of which were at toxic levels.

The Nova Scotia Police Commission conducted a Commission of Inquiry in response to a complaint by Mr. Bailey's family. The Commission identified the limited budget of the Cape Breton Regional Police Service (CBRPS) as contributing to the lack of training around matters such as drug recognition and the effects of mixing drugs and alcohol. It also identified that training regarding proper procedures for monitoring people in cells was poor. The Commission identified several weaknesses in the Prescription Monitoring Association of Nova Scotia (PMANS), which oversees prescription processes of physicians with the goal of reducing the over-prescribing and trafficking of prescribed medications. The RCMP participates in this program, but local police do not, and the system requires manual entry of information, resulting in significant delays.

The Commission also noted there was no formal approach for Nova Scotia police to learn and disseminate information from other jurisdictions and agencies, such as alerts regarding the dangers inherent in mistaking intoxication by drugs for alcohol abuse.

<sup>18</sup> "Report of the Commission of Inquiry into Matters Relating to the Death of James Guy Bailey, Jr." Nova Scotia Police Commission (September 2005), <https://novascotia.ca/just/publications/docs/JamesGuyBaileyInquiry09-1-05.pdf>.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

**Recommendations Relevant to the Mandate of the Mass Casualty Commission**

- (Recommendation A-1) The CBRPS must find the ways and means of providing adequate continuing education to its officers and employees. [...]
- (Recommendation A-2) Police forces should develop a means of “flagging” their computer databases in regard to known substance abusers and persons with a history of suicide attempts or mental illness. This information would only be gathered from police records and recorded officer experiences in order to comply with privacy requirements.
- (Recommendation B-7) The Operational Policy on the Care and Handling of Prisoners should be amended to direct the arresting officer to check for CPIC and in-house records to assist in determining if the prisoner has an arrest history, a history of mental illness, suicidal tendencies, a history of drug use, or other information relevant to the prisoner's well-being while in the lockup.
- Recommendation B-19) The possibility and means of receiving and disseminating information received from other jurisdictions should be explored. The possibility of this information transfer in conjunction with the Nova Scotia Police Commission should be explored.
- (Recommendation I-5) The CBRPS must insure that all officers are briefed on current and new policies and procedures. Duty sergeants, or other appropriate supervising officer, must be made responsible for ensuring that all policies and procedures are reviewed by each officer. This must be more than just handing the policy and procedure manuals to officers and requesting a signature. Performance reviews may be the most opportune time for ensuring familiarity with the policy and procedures among the officers.
- (Recommendation J-1) The PMANS needs to be brought into the 21st century and computerized. A network should be created that would allow physicians, pharmacists and emergency departments to access the database. Because this requires an allocation of human resources and financing, the how and the when should be left to the provincial government and other interested parties. However, this matter is reaching crisis proportions and must be considered a priority.
- (Recommendation J-2) The annual budget for the PMANS must be increased to a level that is realistic in light of the scale of the current problem. Budgeting for the maintenance of the computer network system mentioned above should be included in this increase.

---

**2.1.3. Inquiry into Matters Relating to the Death of Dean Richard (Nova Scotia Police Commission, 2005)<sup>19</sup>**

This inquiry by the Police Commission<sup>20</sup> was ordered by the Minister of Justice following complaints by the parents of a young man killed in a car accident in 1996. The man, Dean Richard, had been thrown from a car and was on the ground when a police officer on patrol came upon the scene. The officer stopped his car and did not block the highway or switch his emergency lights on immediately. Another car driving along the highway passed the officer and hit Mr. Richard, who later died from his injuries. The family raised concerns about the quality of the

<sup>20</sup> The Nova Scotia Police Commission was the precursor organization to the present Office of the Police Complaints Commissioner of Nova Scotia.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

investigation, the officer's failure to block the highway or switch his emergency lights on to alert oncoming traffic to the accident, and the quality of communication between the police and the family and between the Department of Police and Public Safety Services after the accident.

The Commissioner did not make any findings adverse to the police. He made recommendations regarding emergency lights in police cars, police communication with families, and the timelines governing complaints to the Police Commission.

#### **Recommendations Relevant to the Mandate of the Mass Casualty Commission**

1. (Recommendation 2) Each police department would consider assigning one contact person to deal with family when serious questions or concerns arise. This person should be trained in conflict management and have access to all pertinent information.
2. (Recommendation 3) Appropriate procedures and protocols be developed by Police and Public Safety Services to assist with their approach to members of the public in a consistent, timely manner.
3. (Recommendation 4) The person with Police and Public Safety Services assigned as the public contact person have training in conflict resolution and mediation.

---

#### **2.1.4. Victoria Rose Paul Investigation (Nova Scotia Police Complaints Commission, 2012)<sup>21</sup>**

In August 2009, Victoria Paul, a Mi'kmaw woman, died of a stroke in Truro while in detention following her arrest for public intoxication. The stroke was not caused by trauma or intoxication. She was alert and able to communicate and walk when she arrived but showed clear signs of deterioration for several hours before she was medically assessed. Staff assumed she was still intoxicated, even ten hours after her arrest. They left her lying in her own urine for several hours.

The Chief of the Truro Police Service asked the Halifax Regional Police to conduct an operational review of the matter, which appeared to focus only on whether police conduct caused Ms. Paul's stroke. (This review took place before the Serious Incident Review Team became operational in Nova Scotia.) In 2011, Nova Scotia's Minister of Justice ordered the Police Complaints Commission to review Ms. Rose's detention and death, as well as the adequacy of the HRP's investigation. This review made the following findings:

1. Members of the Truro Police Force failed to appropriately monitor Ms. Paul's health and provide her with timely access to medical assistance and failed to treat her with respect and dignity.
2. Truro police had significant training in a number of relevant areas yet demonstrated complacency toward the care and custody of apparently intoxicated people.
3. The Halifax Regional Police investigation was very narrow in focus. Because the Chief of the Truro Police Service was related to the Deputy Chief in Halifax, Ms. Paul's community believed the HPS was not impartial.

---

<sup>21</sup> "Victoria Rose Paul Investigation Report." Nova Scotia Police Complaints Commission (May 2012), [https://novascotia.ca/just/global\\_docs/Victoria\\_Rose\\_Paul\\_Investigation\\_Report\\_20120524.pdf](https://novascotia.ca/just/global_docs/Victoria_Rose_Paul_Investigation_Report_20120524.pdf).

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

4. Provincial standards for lock-up facilities needed clarification and updating. The review noted that few of the recommendations from the Bailey inquiry (above), which raised very similar issues in 2005, had been implemented. However, a new provincial committee had been set up to revisit the provincial policing standards.

### Recommendations Relevant to the Mandate of the Mass Casualty Commission

- (Recommendation 3) Truro Police Service to provide officers and custodians adequate on-site training in order for these employees to sufficiently carry out their duties. This training should include at a minimum proper training on the policies and provincial standards of the care and custody of prisoners, how to interact with challenging or intoxicated individuals, conflict resolution, suicide intervention, use of force, how to conduct quality checks on persons in custody, and how to determine whether medical assistance is required.
- (Recommendation 7) Truro Police Service provide all officers, civilian staff, and custodians sensitivity and cultural awareness training.

---

#### 2.1.5. Inquiry into the Death of Howard Hyde (Nova Scotia Provincial Court, 2010)<sup>22</sup>

Judge Anne Derrick of the Nova Scotia Provincial Court conducted this review of the death of a man with severe schizophrenia while in custody of the Halifax Regional Police Service. Mr. Hyde had been arrested after assaulting his common-law partner. He had been experiencing a recurrence of his schizophrenia, which caused paranoia, anxiety, agitation, and psychosis. Mr. Hyde's partner told the officers who arrested him that he was "schizophrenic" and had told 911 that he would respond violently to any intervention, had mental health issues, had not been taking his medication, and that he had been tasered in the past and was paranoid of police. Mr. Hyde was passive and cooperative during the arrest. Judge Derrick found that the arresting officers were professional and responsible but did not appreciate that Mr. Hyde was experiencing a serious mental health crisis and did not believe they had grounds to apprehend him under Nova Scotia's Involuntary Psychiatric Treatment Act. Judge Derrick concluded that the information his partner had given to 911 did in fact give grounds to do so. However, it was unclear whether that information was communicated to the arresting officers. The officers did not ask the Mobile Mental Health Crisis Team to attend.

After Mr. Hyde spent an hour in a holding cell, his arresting officer and two officers responsible for booking prisoners attempted to cut the laces in Mr. Hyde's shorts. Mr. Hyde had been unable to untie them. Mr. Hyde became terrified of the cutting device and struggled with the officers in an attempt to escape. The officers did not have training on dealing with people with mental illness and had not been told of Mr. Hyde's illness. They did not call the Mobile Mental Health Crisis Team. After trying to restrain Mr. Hyde, they used a Conducted Energy Weapon (Taser) on him repeatedly.

Once the booking officers wrestled him to the floor, Mr. Hyde lost consciousness and stopped breathing. He was revived and taken to hospital. Seven hours later, he had stabilized and was discharged back into police custody. The ER physicians were of the view that he urgently needed a psychiatric assessment and treatment; however, they erroneously believed the court would

---

<sup>22</sup> "In the Matter of a Fatality Inquiry Regarding the Death of Howard Hyde: Report Pursuant to the *Fatality Investigations Act*." Nova Scotia Provincial Court (November 2010), [https://www.courts.ns.ca/provincial\\_court/NSPC\\_documents/NSPC\\_Hyde\\_Inquiry\\_Report.pdf](https://www.courts.ns.ca/provincial_court/NSPC_documents/NSPC_Hyde_Inquiry_Report.pdf).

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

send him for a clinical psychiatric assessment (rather than a forensic psychiatric assessment) and he would then obtain the care he required. The officers who transported him from the hospital to court did not make any entries in the police database that he had received an injection of schizophrenia medication, that he needed to be seen by a mental health professional, or that he could alternate between being lucid and incoherent. Mr. Hyde appeared in court but was remanded to the Central Nova Scotia Correctional Facility overnight as it was too late in the day to arrange bail and his release. He paced all night and did not sleep. The next morning, when leaving his cell to go to court, he became fearful and tried to escape. He struggled with the correctional officers. These officers did not know of his mental health history or of his behaviour overnight and had no training in mental health issues or crisis intervention techniques. He was taken to a cell and again struggled with the officers vigorously while prone on the floor of the cell for two and a half minutes. He stopped breathing, with no pulse. He was transported to hospital and pronounced dead.

Judge Derrick concluded that the officers who were involved in Mr. Hyde's arrest would have benefitted from training in dealing with people with mental illness, in the role and function of the Mobile Mental Health Crisis Team, and in their powers under the Involuntary Psychiatric Treatment Act, as well as clearer policy guidance on what can trigger those powers.

With respect to the officers' use of a Taser during the incident in the booking area, Judge Derrick found that although the Tasing was done according to policy, it was ill-advised and only aggravated the situation.

Judge Derrick concluded that the officers' use of force on the morning of Mr. Hyde's death was reasonable and proportionate. She also concluded that he died as the result of physiological changes in his body brought on by the intense struggle with the officers, and that this was accidental.

Judge Derrick concluded that the officers who interacted with Mr. Hyde would have benefitted from training in dealing with people with mental illness, the MMHCT, and crisis intervention techniques. She noted that since his death, significant changes had been made to training, legislation, and policies to ensure that frontline responders in Nova Scotia are able to respond appropriately to people with mental illnesses.

Judge Derrick also noted that although Mr. Hyde was living in Halifax at the time of his arrest, he had previously lived in rural Nova Scotia and had to rely on in-hospital treatment due to the absence of community mental health supports or services. She recommended that the province examine how mental health services for persons in conflict with the law could be enhanced outside of Halifax, and made numerous other recommendations to improve the mental health system in Nova Scotia.

In 2011, the Nova Scotia government released a plan for improving its response to people with mental illness in the criminal justice system.<sup>23</sup> It published an update on progress toward that plan in 2012.<sup>24</sup>

---

<sup>23</sup>"Building Bridges: Improving Care in Custody for People Living with Mental Illness", available at [https://novascotia.ca/just/hyde\\_inquiry.asp](https://novascotia.ca/just/hyde_inquiry.asp)

<sup>24</sup> [https://novascotia.ca/just/global\\_docs/Hyde\\_Report\\_Response.pdf](https://novascotia.ca/just/global_docs/Hyde_Report_Response.pdf)

2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

**Recommendations Relevant to the Mandate of the Mass Casualty Commission**

- a) The Province should develop a provincial mental health strategy that ensures coordination of care, integration of services and supports, and monitors quality and outcomes in relation to mental health generally and mental health in the context of the criminal justice system. The Strategy should be informed by “best practices” and the Convention on the Rights of Persons with Disabilities.
- b) The Province should create a position in government of Director of Mental Health Strategy whose mandate will be to oversee and be accountable for the Province’s mental health strategy. The position would also involve responsibility for monitoring the treatment of persons with mental illness by the various components of the justice system and oversight of mental health training for Department of Justice employees.
- c) The Director of Mental Health Strategy should have recent, relevant experience in mental health policy generally and mental health policy in the context of criminal justice.
- d) The Province should establish an inter-departmental (Justice and Health) Committee, to address mental health issues in the criminal justice system. The Committee should report to the Deputy Ministers for Health and Justice.
- e) The Director of Mental Health in Criminal Justice should chair the Justice and Health Committee. Membership on the Committee should not be limited to representatives from the Departments of Justice and Health and should include representation from the Capital District Health and a senior member of the Halifax Regional Police Service. The Department of Community Services should also be invited to participate. The Committee should also include a representative from each of the Schizophrenia Society of Nova Scotia and the Canadian Mental Health Association, to be selected by those organizations.
- f) The Director of Mental Health Strategy and the Justice and Health Committee should carefully review the content of the Consensus Project<sup>25</sup> to identify what might be valuable in improving the Nova Scotia criminal justice system’s response to persons with mental illness.
- g) Through a collaboration of departmental representatives, (Department of Health, Department of Justice), Capital District Health, health professionals, police representatives, mental health “consumer” representatives and other appropriate participants, issues relating to service modalities and service delivery, access to services and suitability of services and supports should be assessed.
- h) The Province through its funding of mental health services, should support community-based mental health programmes and services and alternative treatment modalities to pharmacological and involuntary hospitalization models.
- i) The Province should significantly increase funding for mental health services. This increase in funding should not be achieved through a reallocation of existing health care funding.
- j) Increased funding for mental health services should be directed to: enhancing support for improved community-based mental health services, increased training for front-line police officers, sheriffs and correctional officers, supports for family physicians providing mental health services to patients, increasing and improving community awareness about and understanding of mental illness, in the general public and particular groups such as police

---

<sup>25</sup> This is a 2002 report of the Council of State Governments Justice Centre, an American non-profit organization focused on public safety. The Criminal Justice/Mental Health Consensus Project focused on improving the criminal justice system’s interactions with people with mental illness. <https://csgjusticecenter.org/publications/the-consensus-project-report/>

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

officers, teachers, family physicians and members of the justice system, and campaigns to eliminate the stigmatization of persons living with mental illness.

- k) The proportion of the mental health budget directed to the provision of treatment and support in community settings should be increased.
- l) The Department of Health should explore alternate means of delivering mental health care and treatment in order to provide greater access to mental health services. Greater use could be made of nurse practitioners specializing in psychiatric issues, in community-based, mental health clinics. Individual psychiatrists could provide consultation services for family medicine practice groups.
- m) The Department of Health, Mental Health Services Branch should recognize the value of Peer Support and through appropriate policy development, working in conjunction with existing Peer Support programs being delivered by CMHA, Self Help Connection and Healthy Minds Cooperative, proceed with broader implementation of more fully funded Peer Support Programs with paid Peer Support Workers.
- n) The Province should examine how mental health services for persons in conflict with the law can be enhanced outside of the Halifax Regional Municipality.
- o) Halifax Regional Police and health authorities (CDHA and IWK) should continue and expand their collaborative work, including better and more comprehensive education in the law enforcement community regarding the mandate and ability of the Mental Health Mobile Crisis Team to provide advice and conduct mobile visits at any stage of the justice system process. This should include exploration of additional models for police and mental health collaboration when responding and providing service to persons with mental illness.
- p) The MMHCT [Mobile Mental Health Crisis Team] and its supporting agencies should promote greater awareness among emergency department physicians and nursing staff, family physicians, justice system officials, family members, friends, community-based organizations and other social supports of people with a mental illness about the Team's ability to provide advice, including about community supports and resources, and to conduct mobile visits and assessments at any stage of the person's illness.
- q) The Mobile Mental Health Crisis Team should ensure it has protocols in place that direct follow-up of a contact with the Team in all cases to ensure that the person who has been the subject of the call is receiving appropriate services. A detailed record should be made of a follow-up or a case debriefing.
- r) In recognition of the role police officers play as mental health first responders, the Province should fund a police access line so that information about mental health services available through the health care system and in the community is readily available to all patrol and Booking officers in particular. The inventory of services could be compiled through a collaboration of the Departments of Justice, Health, and Community Services and the Capital District Health Authority, the Mobile Mental Health Crisis Team, and the Schizophrenia Society and the Canadian Mental Health Association. The inventory of services should identify the nature of the service and appropriate contact information and be updated regularly so that the information being relied on by police officers coming into contact with persons with a mental illness is accurate and current.
- s) The [Justice and Health] Committee referred to in Recommendation #4 should monitor the work of the Mental Health Commission of Canada to identify "best practices" for developing a provincial anti-stigma campaign. The Province should support local community initiatives and

2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

programmes that promote an anti-stigma, inclusive message or engage in a positive stigma-reduction activities.

- t) The Province, Health Authorities, policing services and members of the health care and justice communities should immediately adopt respectful language that is appropriate in identifying persons with a mental illness: persons with a mental illness, persons living with a mental illness.
- u) The Province should be addressing in the context of its proposed *Personal Health Information Act* (Bill 64) and the development of its electronic health record system – SHARe (Secure Health Access Record), the issues of confidentiality and privacy rights, consent, disclosure and stigma as they specifically relate to the health care records and needs of mental health service users and persons in custody, and consulting with the affected constituencies and mental health service providers.
- v) All persons in the justice system who have contact with persons with mental illness should receive training that includes: current information about community resources and supports for persons with mental illness; basic human rights principles; empathy; anti-stigma awareness; communication and listening skills.
- w) Training should assist in the identification and care of persons who may be experiencing a psychiatric emergency. This would include topics such as identification of mental health issues, determination of whether a medical referral is needed, and development of skills for communicating with persons with mental illness.
- x) All training of persons in the justice and health care systems with respect to mental health issues should involve or continue to involve persons with lived experience with mental illness, including, where relevant and feasible, lived experience with mental illness and the criminal justice system.
- y) The Halifax Regional Police should adopt the objective of providing Crisis Intervention Training to all patrol officers as well as all booking officers and all officers who provide use of force training in the Department.
- z) The Halifax Regional Police Service should continue training members to be part of the Mobile Mental Health Crisis Team.
- aa) The Halifax Regional Police should enhance the Canadian Police Knowledge Network online training “Recognizing Emotionally Disturbed Persons”, which is currently offered as a “baseline” training program, with skills development through role-playing and in-classroom instruction and trainer/learner interaction.
- bb) The Department of Justice should integrate Crisis Intervention concepts and skills-instruction into the joint, use of force training program being developed in the Department.
- cc) The Department of Justice should enhance the Canadian Police Knowledge Network online training “Recognizing Emotionally Disturbed Persons”, which is currently offered as a “baseline” training program in mental health issues, with skills development through role-playing and in-classroom instruction and trainer/learner interaction.
- dd) The Minister of Justice should undertake an annual review of the implementation of the Recommendations of this Inquiry, which review to be completed by the anniversary date of the filing of the Inquiry’s Report, and made public no later than two months from that date, including by posting the review on the Department of Justice website.
- ee) The implementation of these Recommendations should be informed by and consistent with the principles of the Convention on the Rights of Persons with Disabilities.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

ff) The Province should post this Report on the Department of Justice website.

## 2.2. The Rest of Canada

This section summarizes reports focused on police culture outside of Nova Scotia. Reference should also be made to the reports summarized in Section 3, “Communications among and within Law Enforcement Agencies,” and Section 4, “Communications with Community.”

---

### 2.2.1. Aboriginal Justice Inquiry of Manitoba (1991)<sup>26</sup>

This inquiry was established in 1988 following public concern about the response of the Manitoba justice system to the deaths of two Aboriginal people, Helen Betty Osborne and J.J. Harper.

Ms. Osborne was killed in 1971 in The Pas. Although the identities of the four men who were present when she was killed were widely known in the community, the case was not brought to trial until sixteen years after her death, in 1987. Every Indigenous member of the jury was eliminated through peremptory challenges, two of the four men were charged, and only one was convicted of any crime.

J.J. Harper, who was the executive director of the Island Lake Tribal Council, died in 1988 following an encounter with a City of Winnipeg police officer. The police department conducted an internal investigation within a day, exonerating the officer involved. Members of the public demanded public inquiries in the wake of these deaths and the justice system’s responses.

The Commissioners were Alvin Hamilton, former Associate Chief Justice of the Manitoba Court of Queen’s Bench, and Murray Sinclair, then-Associate Chief Justice of the Manitoba Provincial Court. The mandate of the inquiry was to examine the relationship between Aboriginal people and the justice system and suggest mechanisms for improvements. It also specifically examined the Osborne and Harper cases. The inquiry held over 120 days of hearings and visited 36 Aboriginal communities across Manitoba, where members of the communities described their experiences with and feelings about the justice system. The inquiry also conducted research, commissioned research papers, held a symposium with tribal courts, and convened a conference with Indigenous Elders. The Final Report was issued in the autumn of 1991 and included 296 recommendations.

The Report began with the following statement:

The justice system has failed Manitoba’s Aboriginal people on a massive scale. It has been insensitive and inaccessible and has arrested and imprisoned Aboriginal people in grossly disproportionate numbers. Aboriginal people who are arrested are more likely than non-Aboriginal people to be denied bail, spend more time in pre-trial detention and spend less time with their lawyers, and, if convicted, are more likely to be incarcerated.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

It is not merely that the justice system has failed Aboriginal people; justice also has been denied to them. For more than a century the rights of Aboriginal people have been ignored and eroded. The result of this denial has been injustice of the most profound kind. Poverty and powerlessness have been the Canadian legacy to a people who once governed their own affairs in full self-sufficiency.<sup>27</sup>

### The Death of Helen Betty Osborne

Ms. Osborne, nineteen years old, was walking down a street in The Pas on the morning of November 13, 1971 when she was attacked by four men who forced her into their car and drove away. She was physically and sexually assaulted at two locations. She was viciously beaten and stabbed with a screwdriver, and then dragged into the bush. Her body was discovered the next morning. The police were sensitive when notifying Ms. Osborne's mother of her death and initially kept her apprised of the investigation, but the Commissioners noted that they did not offer her any counselling or support assistance. Police also failed to keep her informed as the years progressed.

In the immediate aftermath of Ms. Osborne's death, the RCMP questioned several of her friends, all of whom were Aboriginal. These interrogations were often brutal and insensitive. They brought one young woman they were questioning, Annaliese Dumas, out of town and threw her against the hood of a car when she became tongue-tied. They then took her to the morgue to show her Ms. Osborne's severely battered body, a traumatizing and unjustified action.<sup>28</sup> Police brought another Aboriginal youth, Cornelius Bighetty, in for questioning and showed him pictures of Ms. Osborne's body, causing him to faint. He was 17 years old, and his caregivers had not been informed of the interrogation, let alone asked permission for its conduct, as required by law.

Police made no progress until they received a letter six months later from an anonymous woman who had been told of the murder by one of the assailants. That letter identified three of the assailants, James Houghton, Lee Colgan, and Bernard Manger. An informant then identified Dwayne Johnston as the fourth assailant. The four men refused to speak to police, and the investigation stalled. In 1985, the RCMP put an ad in a local newspaper asking for public assistance to solve the murder. They then received reports that Mr. Colgan and Mr. Johnston had made several comments over the years about participating in the murder. Mr. Colgan and Mr. Johnston were both charged with first-degree murder in 1986. Mr. Colgan agreed to testify against Mr. Johnston in exchange for complete immunity.<sup>29</sup> On the basis of Mr. Colgan's evidence, Mr. Houghton was charged. Mr. Johnston was convicted of second-degree murder and sentenced to life imprisonment without eligibility for parole for ten years. Mr. Houghton was acquitted. No charges were ever laid against Mr. Colgan (due to the immunity agreement), or against Mr. Manger.

The Commissioners found that the RCMP detachments in The Pas made extensive and appropriate use of the resources and people that were made available to them. Over 50 officers in The Pas and around the country worked on the investigation in the first year alone. The Commissioners were critical of some aspects of the investigation, including poor-quality photography and improper treatment of footprints around Ms. Osborne's body. They also noted a

<sup>27</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume I, chapter 1.

<sup>28</sup> The Commissioners also pointed out that this showed disrespect for Ms. Osborne's body, which could be attributed to racism on the part of the investigators. "Report of the Aboriginal Justice Inquiry of Manitoba," volume I, chapter 9.

<sup>29</sup> The Commissioners found this to be a reasonable decision, given the dearth of evidence against Mr. Colgan and the other accused.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

significant error with respect to the search for the car that transported Ms. Osborne to the scene of her murder. A taxi driver had told the investigators that on the day of the murder, he had noticed a car on the highway near where Ms. Osborne's body was found, close to the likely time of the murder. He remembered four digits of the license plate number. The police issued a province-wide request of officers to check cars with similar plate numbers. Eventually, through diligent police work, the investigators discovered that the only car from The Pas with a license plate with the same four numbers was registered to Harold Colgan, the father of Lee Colgan. However, instead of seizing Mr. Colgan's car, they relied on a report from an officer from another detachment. This officer had reported that during a routine check around the time of the murder (and not in response to the province-wide request), he had looked in the back seat of the Colgan vehicle and seen nothing unusual. He said that he knew the person driving the car, Lee Colgan. There was no record of this check, and the officer who conducted the check did not appear to have known that a murder had occurred. The Commissioners stated:

It is difficult to understand why the rural detachment would refrain from what would be a normal follow-up on the excellent work they had done just because an officer from the town detachment seemed to "vouch for" the owner of the car. No effort was made to do what had been requested of other detachments—to determine the whereabouts of any vehicle with the numbers 5342 in the licence on the night of the murder. ...

It would be easy to conclude that the middle-class status of the Colgan family was a contributing factor to the RCMP's casual approach to checking their vehicle. Less "respectable" citizens surely could not expect such deferential treatment.<sup>30</sup>

Months later, after receiving the letter implicating Mr. Colgan, Mr. Houghton, and Mr. Manger, the RCMP did seize and search Mr. Colgan's car. They found a strand of hair, a blood stain that could not be identified, and a piece of a brassiere that matched a brassiere found by the side of the road. They did not find any fingerprints.

Police then learned from an informant of Mr. Johnston's involvement. They asked Mr. Colgan and Mr. Houghton's parents for permission to question them (which was not required, as both were over 18); permission was declined. The Commissioners concluded that although the police did not have grounds to lay a charge, they did have sufficient information at this time to arrest any or all of the four suspects and take them to the detachment for questioning. The Commissioners noted that the police took Aboriginal friends of Ms. Osborne's to the detachment for questioning and suggested the reluctance to question Mr. Houghton and Mr. Colgan "may have been prompted by the suspects' middle-class status."<sup>31</sup> The only member of the group of four suspects to be questioned in a manner similar to the Aboriginal friends of Ms. Osborne was Mr. Manger, whose mother was Aboriginal. A few months after receiving the anonymous letter implicating him, two officers took Mr. Manger out of town to the bush. They asked him what really happened. Mr. Manger feared they were going to beat him. He agreed to do a polygraph test, and the officers returned him to town. Before the polygraph could be administered two days later, Mr. Manger spoke to a lawyer, who withdrew Mr. Manger's consent to the polygraph and asked the police to stop harassing him.

<sup>30</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume II, chapter 4.

<sup>31</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume II, chapter 4.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

The Commissioners stated the following:

There is a striking contrast between the way the three non-Aboriginal suspects were dealt with and the manner in which the Aboriginal informants were treated. The parents of Houghton and Colgan were consulted before a formal interview was attempted. Their wishes that their sons not be interviewed were largely respected. Neither Colgan nor Houghton were taken into the bush to be questioned. But Manger and [Annaliese] Dumas both were, and both are Aboriginal. Dumas, it should be noted, is also a woman. While we have no sympathy for Manger, it is clear that the RCMP acted improperly towards him and Dumas. This apparent difference in treatment suggests that the RCMP tailored their treatment in accordance with the race, sex or class of the person with whom they were dealing.

This contrast lends further credence to the belief that Aboriginal people were not treated with the same respect as non-Aboriginal persons. In view of the deference shown to the Colgan family, the conclusion is inescapable that the inappropriate treatment of [Cornelius] Bighetty, Dumas and others occurred because they were Aboriginal and, therefore, in the eyes of these officers, less deserving of courtesy and respect.<sup>32</sup>

The Commissioners also commented on the failure of the higher levels of the RCMP at Divisional Headquarters to adequately supervise the members of the Pas detachment, who were less experienced.

The Commissioners also examined whether it was widespread knowledge in the community within a short time of Ms. Osborne's death that the four suspects were responsible. The concluded that some who were friends and family members of the perpetrators remained silent to protect them; others feared the perpetrators. There were also rumours in the broader community that the four men were responsible. The Commissioners noted that the silence of these community members suggested a poor relationship between the police and the community: "Either the police were not close enough to the community to hear the rumours, or the community members did not feel close enough to the police to discuss matters of this kind with them."<sup>33</sup> The Commissioners noted, however, that many people did come forward years later when the police requested public assistance with the investigation.

With respect to the general disinclination of people to report information about crime involving others, the Commissioners commented as follows:

Our society generally shows an indifference to the victims of crime. Unless there is a direct personal connection to victims, it is all too easy for us to disregard their plight. It is easier and safer not to become involved... Indifference to the victims of crime takes the form of detachment and passivity, a kind of personal insulation from the unpleasant realities of the world around.

Coupled with this is the attitude that crime is a matter for the police. This attitude serves to release individuals from taking personal responsibility even in situations where they have knowledge which might further the cause of justice. Many people in our society feel estranged from the police, making it all the more likely they will attempt to remain uninvolved.

---

<sup>32</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume II, chapter 4.

<sup>33</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume II, chapter 5.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

All these attitudes seem to have been at play in The Pas during the investigation of the murder of Betty Osborne. Indifference to the victim and a wish to remain uninvolved were probably more powerful motivating factors than was racism.<sup>34</sup>

The Commissioners also addressed the murder itself, concluding that it was a racist and sexist act, and that Ms. Osborne would still have been alive if she had not been an Aboriginal woman. They concluded that Ms. Osborne's attackers believed that Aboriginal women were "objects with no human value beyond sexual gratification."<sup>35</sup> They noted that cruising for sex was common in the community at the time and that young Aboriginal women were usually the targets, but the RCMP did not consider this worth patrolling. The Commissioners expressed outrage that women, particularly Aboriginal women, were treated this way:

Violence against women has been thought for too long to be a private affair. Assaults on women have not been treated with the seriousness which they deserve. Betty Osborne was one of the victims of this despicable attitude towards women.<sup>36</sup>

The Commissioners also noted that many participants in the inquiry suggested that Ms. Osborne's murder would have been investigated differently if she had been white.

The Commissioners also made findings and recommendations about the jury pool composition and use of peremptory challenges, which allowed defence counsel to reject all six Aboriginal people who were called as potential jury members at the murder trial.

### **The Death of John Joseph Harper**

John Joseph Harper was a member of the Wasagamack Indian Band and executive director of the Island Lake Tribal Council. He was 37 years old and had a wife and children. In the early hours of March 9, 1988, Mr. Harper was killed by a bullet from a service revolver belonging to Constable Robert Cross of the Winnipeg Police Department. The following day, the Firearms Board of Enquiry of the Winnipeg Police Department concluded that Mr. Harper had assaulted Constable Cross, that there had been a struggle for Constable Cross' revolver, and that the revolver had discharged accidentally. An inquiry under the Manitoba Fatality Inquiries Act also concluded that the shooting was accidental and that Constable Cross' attempt to keep control of his gun was justified.

The Commissioners of the Aboriginal Justice Inquiry produced extensive findings about Mr. Harper's death and the resulting investigations. On the evening of March 8, 1988, Mr. Harper was socializing in the lounge of the Westbrook Hotel in Winnipeg. Test results at the time of death showed that he had high blood alcohol levels. He left the hotel to walk home at approximately 2:00 AM. Earlier that evening, a young Aboriginal man named Melvin Pruden had stolen a car from the Westbrook Hotel parking lot and gone joy riding with a friend, whose name is not stated in the Report. The car was reported stolen. At approximately 2:00 AM, at the same time that Mr. Harper was leaving the hotel, two Winnipeg Police Officers, Constable Cross and Constable Hodgins, were patrolling near the hotel. They saw the stolen car and began to chase it. Mr. Pruden and his friend abandoned the car and fled on foot. The officers followed them until they disappeared.

<sup>34</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume II, chapter 5.

<sup>35</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume II, chapter 5.

<sup>36</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume II, chapter 5.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

Constable Cross caught up with the young friend, and he and Constable Hodgins questioned him in the police car. Constable Hodgins told the Commissioners that she made notes of what the youth said on a scratch pad rather than in her notebook and subsequently lost the scratch pad notes. Constable Hodgins radioed that the other suspect was “Male, native, black jacket, blue jeans, approximately 22 years old.” She later said that this is what the youth told her and denied that this description came from her or from Constable Cross’ own observations of Mr. Pruden and the youth while they were in the stolen car. The youth told the Commissioners that he had not given the officers any description of Mr. Pruden and had said the man was between 17 and 19 years of age.

Eventually, other members of the Winnipeg police located Mr. Pruden and arrested him. The news of his arrest was broadcast immediately. There was no suggestion that they did not have the correct person in custody or that there was a third suspect at large.

At approximately 2:37 AM, after hearing that the suspect had been arrested, Constable Cross started walking toward the location of the arrest. On his way, he encountered Mr. Harper near a park. He approached Mr. Harper and asked him for identification. Constable Cross told the Commission that he asked Mr. Harper for identification because he wanted to be sure the police had arrested the right person. He said the youth had told him and Constable Hodgins that the driver of the stolen car was wearing a black leather jacket, and he could see that Mr. Harper’s jacket was black.

Constable Cross told the Commission that Mr. Harper said he did not have to tell Constable Cross anything. Constable Cross said he told Mr. Harper that he matched the description of a suspect he was looking for involving the theft of a car and asked again for identification. Mr. Harper again refused and started walking past Constable Cross. Constable Cross then placed his hand on Mr. Harper’s upper arm as he walked past and turned Mr. Harper around. Constable Cross said he did not have grounds to arrest Mr. Harper and was not trying to arrest him but wanted to stop him to explain in more detail why he wanted to see Mr. Harper’s identification. Mr. Harper turned to face him, and Constable Cross put his other hand on Mr. Harper’s wrist. Constable Cross said that Mr. Harper pushed him, causing him to fall. As he fell, Constable Cross grabbed Mr. Harper, pulling Mr. Harper down on top of him. They struggled, and Constable Cross felt a tug on his holster. He reached down to grab his revolver. The revolver came out of its holster, with both his and Mr. Harper’s hands on it. The gun went off and hit Mr. Harper in the chest.

Constable Cross stood up, fell back, and took a moment to regain his composure before radioing for his partner and an ambulance at 2:40 AM. The two officers who were first on the scene testified that Constable Cross said, “He went for my gun, and I shot him.” Another officer said that Constable Cross said, “I approached him, I asked him for I.D., and he hit me, knocked me down and went for my gun, it came out and he got shot.” His partner, Constable Hodgins, said he told her, “He jumped me, Kath. I was on my back on the ground. He went for my gun.” The youth, who was in the back seat of the cruiser, said that when Constables Cross and Hodgins got in, Constable Cross said, “I happen [sic] to reach for my gun... It happened so fast, I pulled the trigger.” The youth also said he heard an older officer at the scene tell Constable Cross to say the gun went off accidentally, and Constable Cross agreed that he would.

The Commissioners concluded that Mr. Harper did not fit the description of the man who had fled the stolen car. Constable Cross had no grounds to believe Mr. Harper was a suspect. The law requires and Winnipeg police policy and training confirm that if a person refuses to give their name and there are no grounds for arrest, an officer has no right to grab or otherwise try to stop the

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

person from continuing on their way. Mr. Harper may well have been justified in using force to resist what may have amounted to an unjustified assault by Constable Cross.

Although it was impossible to determine exactly what led to the gun going off, Constable Cross' story changed repeatedly. Constable Cross acknowledged having his finger on the trigger and having pulled it. Mr. Harper never had any significant degree of control over the revolver. The Commissioners concluded:

Cross' first remark after the shooting—"He went for my gun and I shot him"—was not given sufficient consideration in the investigation that followed. Instead, the effort to protect Cross and to shift the blame to Harper took precedence. This effort precluded any objective determination of the facts. We believe that officers collaborated in preparing their notes, that at least one set of notes was rewritten completely, and that Cross was assisted over a lengthy period of time in preparing his written statement, all of which causes us great concern. We also are troubled that one officer would advise another to "say the gun went off accidentally." We have been left with the impression that an "official version" of what happened was developed. We are satisfied that version is inaccurate.

Unfortunately, we are not able to report on exactly what did happen at each stage of the confrontation. We can, however, conclude that it was Cross, through his unnecessary approach and inappropriate attempt to detain Harper, who set in motion the chain of events which resulted in Harper's death.<sup>37</sup>

The Commissioners also found that the officers did not follow proper procedure following the shooting and gave Constable Cross special treatment and consideration. Senior officers mishandled Constable Cross' revolver and other evidence, failed to fingerprint the revolver, allowed Constable Cross to speak with other officers, failed to make proper notes of their conversations at the scene, and failed to ensure the investigation was carried out properly. They did not properly question civilian or police witnesses to the shooting and accepted the written reports of officers instead of interviewing them. A Crime Division officer in the Winnipeg force, Sergeant Williams, was called in to interview Constable Cross. The Commissioners concluded that he and other officers assisted Constable Cross to carefully construct his statement so as to ensure he was not in any jeopardy. They also did not record the interview. The Commissioners concluded that the investigation was not a true investigation but rather was engineered to corroborate and reinforce Constable Cross' version of events. Supervising officers also failed to take responsibility for the investigation.<sup>38</sup> The Commission stated:

This was not an independent professional investigation. Those involved in all parts of this investigation were guided, at least to some extent, by the corporate, institutional goal of self-preservation which functioned to reach a conclusion that Cross, and therefore the department, had done no wrong.<sup>39</sup>

The Commission had subpoenaed the notebooks belonging to the officers involved in Mr. Harper's shooting and the subsequent investigation. The Winnipeg Police took the position that

<sup>37</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume III, chapter 4.

<sup>38</sup> Several officers involved in the investigation told the Commissioners that Acting Inspector Kenneth Dowson was ultimately responsible for the Crime Division's investigation of the shooting. However, Inspector Dowson took his life the morning he was scheduled to testify at the Inquiry. The Commissioners were still able to draw some conclusions about the supervision of the investigation, saying, "It may well be that Inspector Dowson was nominally in charge of the investigation, but lines of supervision and communication appear to have been so ineffective that no one actually took responsibility for determining all the facts of this case."

<sup>39</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume III, chapter 5.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

officers' notebooks were in the possession of individual officers and beyond their control, and the Police Association challenged the Inquiry's authority to subpoena those notebooks, along with other aspects of the Inquiry's authority. The Manitoba Court of Appeal required the police to provide photocopies of portions of the officers' notebooks "relating to the Harper matter."<sup>40</sup> In their Report, the Commissioners identified significant problems with the officers' use of their notebooks. One officer had completely rewritten his notebook to change information about the events, which he said he did because another officer identified "mistakes" in it. That officer also falsely stated under oath at the fatality inquiry that he had made those notes at the time of or shortly after the events. Other officers testified that they routinely spoke to their colleagues to obtain or clarify information before writing their notes and also checked radio communications records to identify the timing of events. The Commissioners noted that the Toronto Police Department had much more stringent rules regarding the content and process of recording notes, and notebooks remain the property of the department upon the officer's retirement.

There was a delay in informing Mr. Harper's family of his death, which the Commissioners attributed to problems finding his address. However, the Commissioners found the manner in which the notification was made to be disturbing. They concluded that the officer who told the family spent considerable time asking questions about Mr. Harper's alcohol consumption and behaviour when intoxicated.

The Firearms Board of Enquiry, which was made up only of members of the Winnipeg police, was convened to review the shooting six hours after it occurred. The following morning, it issued its report exonerating Constable Cross. It did so without having all relevant information. The Commissioners concluded that in this instance, the Firearms Board functioned only as a public relations exercise, to assist in corroborating Constable Cross' version of events.

The Winnipeg Chief of Police also made statements the day after the shooting and immediately after the Firearms Board of Enquiry report was issued. Both statements indicated that Mr. Harper had instigated the struggle and the gun had discharged in the course of the struggle. The Commissioners strongly criticized the Winnipeg Police Chief for making these statements, noting that the investigation was not complete and that these statements setting out the Chief's version of events effectively foreclosed the possibility of a proper investigation. "Only the most exceptional or reckless officer would have risked embarrassing the Chief by pursuing the case."<sup>41</sup> The Chief's conduct was "just the visible expression of an attitude which was prevalent in his department—an attitude that viewed the public image of the police department and the interests of one of its officers as more important than finding out the truth about the death of a citizen."<sup>42</sup>

The Report concluded that racism played a part in Mr. Harper's shooting. It also concluded that there was racism in the Winnipeg Police Force, noting evidence that officers had directed racial slurs at the Aboriginal men who stole the car and had made racist comments at the scene of the shooting, and that a racist joke was circulating in the department regarding Mr. Harper's shooting. The Chief had done little to address these incidents of racism and seemed untroubled by them.

In the conclusion of the Commissioner's comments on Mr. Harper's death and the events following his death, they stated:

<sup>41</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume I, chapter 6.

<sup>42</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume I, chapter 12.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

Society requires capable and professional police forces. We sometimes impose upon them responsibilities that are burdensome and expectations that border on the unrealistic. For those reasons, we must understand and accept that on occasion errors will be made and mistakes will happen. We do not demand perfection from our police forces. At the same time we are entitled to insist that they perform their obligations and duties in a professional and responsible manner.<sup>43</sup>

### Findings about the Manitoba Justice System

After reviewing the deaths of Helen Osborne and J.J. Harper and the subsequent investigations, the Commissioners of the Aboriginal Justice Inquiry examined the overall experiences of Indigenous people in Manitoba's justice system. They found that although Indigenous people constitute 12% of the population in Manitoba, they constitute over half of the people in correctional institutions, which the Commissioners described as shocking. They concluded that this overrepresentation of Indigenous people in the jails and at every other point in the justice system is caused by systemic discrimination in the justice system, overt racism, and stereotyping by justice officials, as well as social inequality, poverty, and cultural oppression. These factors are in turn the legacy of colonialism and effects of the long history of efforts by Canadian government institutions to eradicate Indigenous peoples as distinct societies.

The Commissioners focused a chapter of their report on the experiences of Aboriginal women and children. They stressed the very high rates of spousal abuse and other forms of gender-based violence in Aboriginal communities in Manitoba. They also noted statistics demonstrating that most women endure between 11 and 39 episodes of abuse before seeking help, and will then seek help from a shelter rather than from police. Few reported cases ever lead to trial, and rarely lead to a jail term. Aboriginal women were discouraged from seeking help from the police because they heard from others of the lack of sensitivity and understanding police had demonstrated about abuse. At times, women who called police ended up themselves being removed from the home, leaving their children behind. The Commissioners stated:

[I]t is clear that women in abusive situations, particularly in isolated communities in northern Manitoba, do not feel confident in turning to the justice system. We were told that many abused Aboriginal women did not feel safe enough even to bring their personal stories before the Inquiry.<sup>44</sup>

Women in rural communities often waited for a day for police to respond, only to have the abuser driven down the road and released. There are no safe houses for women and children to escape to. "They may be forced to spend the night in the bush, or be forced to leave the reserve entirely." The Report noted that chiefs and council members, who are mostly male, often support male abusers, effectively chasing the women from their communities. The Commissioners strongly criticized the "unconscionable" failure of Aboriginal government leaders to deal with the problem of domestic abuse. They stressed that chiefs and councilors must take on the protection of women and children as a pressing responsibility, particularly on reserves. They also recommended the creation of more appropriate programs for abusers, more transition houses, and more initiatives within the justice system.

The Report also noted the importance of comprehensive responses to domestic violence. The Commissioners recommended the creation of abuse teams made up of officers and social

<sup>43</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume I, chapter 12.

<sup>44</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume I, chapter 13.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

workers trained in family violence response. The teams should respond to all domestic disturbance calls and make a report about the nature of any conflict and any issues that should be anticipated or considered in any subsequent attendance. The teams could also connect families to peacemakers or other support groups in the community. The abuse teams should monitor the progress of families. The Commissioners noted, "It is our belief that preventive policing by an abuse team may be able to catch volatile situations and deal with them before the violence escalates."<sup>45</sup>

The Commissioners also noted the contrast in services provided to Aboriginal women compared to non-Aboriginal women. There were no Aboriginal shelters in the province, except for one in Winnipeg, no Aboriginal safe houses, and no Aboriginal second-stage housing. There were no shelters in reserve communities, requiring women to leave their communities. The Commissioners also noted that the typical police practice of encouraging the women to leave while the men stay in the home is wrong. Although short-term crisis intervention is often necessary, and in some cases, jail is appropriate, the Commissioners also learned that abused women wanted Aboriginally-designed and directed programs, which would emphasize healing within the family and would not exclude the abuser from the treatment process. The Commissioners noted that if an offender is likely to return to the community and family after serving a sentence, it is important to cure the problem of violence. This would include adequate, culturally-based programming for alcohol abuse (a common factor in intimate partner violence in Aboriginal communities), and a recognition of the sources of despair that lead to alcohol abuse.

Abuse of children, including sexual abuse, was shockingly common in Aboriginal communities. The Commissioners acknowledged the role of colonization, they noted that is not an excuse for the way Aboriginal women and children were treated. They described child abuse as the single greatest threat to the future of Indigenous people.

Police-Indigenous relations were the subject of significant scrutiny in the Report. The RCMP provided policing services in most of the rural and Aboriginal communities in the province. Winnipeg, Brandon, and eight smaller municipalities had their own police forces. There were some Indigenous communities that had local, Indigenous-controlled police forces, but the majority of Indigenous communities were policed by predominantly white RCMP or municipal police forces.

The Commissioners identified significant problems with over-policing (harassment, charging and detention of Indigenous people by police in situations where white people would not face the same response) and under-policing (a lack of police presence in Indigenous communities except to make arrests, a focus on crime investigation rather than prevention, failure to enforce laws which protect Indigenous communities, and slow response times when police are called). RCMP members took advantage of Indigenous people, for example, by threatening to hold them in custody until they give statements. At the same time, they refused to investigate injuries and deaths of Indigenous people, or investigated them with less vigour.

The Commissioners identified the history of the RCMP in Manitoba as a significant cause of the suspicion and hostility Indigenous people felt toward police in communities across the province. The RCMP's predecessor, the North-West Mounted Police (NWMP), was created to control the Indigenous population in the western and northern parts of Canada as they entered Confederation. This force was the main instrument for carrying out the repressive government policies of the time. They moved Indigenous people to reserves, ensured they stayed there,

---

<sup>45</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume I, chapter 13.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

administered treaties, and assisted Indian agents to enforce government policies regarding Indigenous people. They captured and returned children who ran away from residential schools and apprehended Indigenous people who left their reserves without a pass. There were some positives: Indigenous people were apparently grateful that the NWMP suppressed the whisky trade and prevented massacres by settlers against members of their communities.

Although the NWMP did not cause the North-West Rebellion of 1885 and warned the government of the need to address the increasing unrest, the NWMP was required to join military forces to suppress the rebellion. They arrested the rebels, a number of whom were hanged in the Mounted Police stockade. Authorities, including members of the Mounted Police, looted and burned the homes of Indigenous people, confiscated property, withheld annuities from bands who had participated in the rebellion, and virtually wiped out the Métis as a distinct political group. The Commissioners found that memories of this treatment lingered in many communities and affected Indigenous peoples' perceptions of other police forces. While members of the dominant culture recognized police forces as entities established to protect them and maintain their social structure, Indigenous people considered the police to be a foreign presence that did not operate on their behalf.

The Report did note that there were some communities in Manitoba where Indigenous people had very positive relationships with police officers. These tended to be in areas where the officers had become involved with the community after staying for a considerable length of time. As well, although there were significant problems with cross-cultural understanding and with the recruitment of Indigenous people to the RCMP, the RCMP had made efforts to improve Indigenous recruitment and had required significantly more cross-cultural training than other forces. The Commissioners expressed concern that financial pressures might lead more municipalities in Manitoba to abandon RCMP contracts and develop more local forces, which under Manitoba law had no standards or requirements for training at all. Forces in Winnipeg and Brandon had also struggled to recruit Indigenous members, although Brandon's force had established an innovative cross-cultural exchange program with the Dakota Ojibway Tribal Council Police Force.

### **Findings about Police Governance**

The Report identified significant problems with the governance of police in Manitoba. The Manitoba Police Commission was responsible by law for evaluating police forces, advising municipal forces, recommending training standards, and making recommendations on communications, equipment, and other matters. However, the Police Commission had only two staff and could not carry out its legislated responsibilities. The authority to appoint officers was fragmented over several pieces of legislation. Unlike other provinces, there were no provincial standards for training, qualifications, or equipment, and no provincial training facility.

Complaints about municipal forces were handled by the Law Enforcement Review Agency (LERA). The Inquiry Commissioners identified significant concerns with the LERA, including undue influence by police chiefs in resolving complaints about and determining penalties for their officers, lack of transparency, and delay in resolutions. There was also an unfair burden placed on complainants, who were required to prove misconduct beyond a reasonable doubt, without counsel, while officers had counsel.

Complaints about RCMP officers were handled by the RCMP Public Complaints Commission (PCC), which was established following two separate public inquiries into the RCMP. The PCC was made up of members from each jurisdiction in Canada that used the RCMP for provincial

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

policing. All these members were chosen by the federal government. No current RCMP members could be appointed to the Commission. The Inquiry Commissioners were highly critical of the PCC. Among the subjects of its criticism was the process whereby any complaint to the PCC was first investigated by the detachment itself, often by the very officer complained of. The onus was then on the complainant to pursue the matter to the PCC. The PCC could then determine that the RCMP investigation was satisfactory and do nothing; ask the RCMP to investigate further; or conduct its own investigation and/or institute a hearing. Officers could be compelled to testify. The PCC then sent a report with findings and recommendations to the parties, minister, and RCMP Commissioner. There was no requirement for the RCMP to follow these recommendations. There was no appeal, and there was no requirement for a hearing. The Inquiry Commissioners noted that the PCC was physically remote from Manitoba, particularly for Aboriginal communities, and drew the following conclusions regarding its process:

The system is not independent, because the RCMP have such an overwhelming influence over the entire process, including power to dismiss the complaint, control the conduct of the investigation and power to disregard the findings of the commission.

We find the process to not be in the public interest. Rather, it appears to be a process designed to protect the RCMP and to leave all its decisions to its own officers, at one level or another.<sup>46</sup>

The Inquiry Report reviewed a number of alternate approaches to addressing public complaints against members of police forces. It noted that in Ontario, prior to legislative reforms in the 1990s, outside police forces had sometimes been called in to investigate police conduct issues. The Commissioners stated:

This was found to be an inadequate solution. It is true that the appearance of independence is enhanced when an outside police force is asked to investigate particular situations, but the appearance of independence is still compromised when police investigate police, especially when police forces must work so closely together on a day-to-day basis to provide good policing.<sup>47</sup>

The Commissioners recommended that the RCMP institute a process similar to the Ontario Office of the Public Complaints Commissioner, which was designed to be fair and independent, with full powers to impose penalties, including dismissals.

The Report's other recommendations on policing focus on the adoption of Aboriginal community-based policing, with regional Aboriginal police forces reporting to Aboriginal communities; the creation of Aboriginal police commissions to support those forces; improvements to employment equity programs, particularly for the Winnipeg and Brandon police forces, in order to ensure that Aboriginal people are substantially represented among the members of the forces; cross-cultural training, particularly to orient new staff to Aboriginal communities; significant work on police standards and procedures in Manitoba; and an effective public complaints body to address policing-related complaints.

### Implementation of Recommendations

The Report included a chapter on the implementation of its recommendations. Numerous participants in the inquiry process had expressed fear that the resulting report and

<sup>46</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume I, chapter 16.

<sup>47</sup> "Report of the Aboriginal Justice Inquiry of Manitoba," volume I, chapter 16.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

recommendations would “placed on a shelf to gather dust” and never be acted on. The Commissioners acknowledged that the extent to which their recommendations would be implemented would depend on their persuasiveness, the degree of support in Aboriginal and non-Aboriginal communities, the willingness and capacity of both the Manitoba and federal governments to make the recommended changes, “and their overall responsibility to govern in a manner that takes into account the interests of all members of society.”<sup>48</sup> The Commissioners set out guidance for the implementation of their recommendations and also recommended the establishment of an implementation commission. This Aboriginal Justice Commission, as the Commissioners referred to it, would have a board of equal numbers of Aboriginal and governmental representatives, along with an independent person agreeable to all parties as chair. It would be independent of government, with the responsibility of monitoring the implementation of the recommendations and reporting publicly on that progress. It could also facilitate negotiations between governments and Aboriginal people, and assist in resolving disagreements. This Commission could also monitor the results of any recommendations that were implemented, such as affirmative action programs.

Eight years after the release of the Report, the Aboriginal Justice Implementation Commission was created to develop a plan to implement the recommendations within the jurisdiction of the provincial government. It issued its Final Report in 2001 with recommendations to promote the implementations of the AJI’s recommendations.<sup>49</sup> It also recommended the creation of a permanent Aboriginal Justice Commission. In an interview in November 2021, Murray Sinclair, Co-commissioner of the original Aboriginal Justice Inquiry, explained that the majority of the AJI’s recommendations had not been implemented due to pushback from institutions in society.<sup>50</sup>

#### **Recommendations Relevant to the Mandate of the Mass Casualty Commission<sup>51</sup>**

1. Culturally appropriate education, trades training, and counselling programs, particularly those having to do with the treatment of alcohol abuse, family violence, anger management and culturally appropriate ways for inmates to cope with their problems, be provided in every Manitoba correctional institution.
2. Aboriginal leaders establish a local government portfolio for women and children, with responsibility to develop educational and support programs in the area of spousal and child abuse.
3. Police forces establish family abuse teams which include police officers and social workers trained in dealing with domestic disputes. Such teams should make extensive use of electronic record-keeping and community resources.
4. Shelters and safe homes for abused women and children be established in Aboriginal communities and in urban centres. These shelters should be controlled by Aboriginal women who can provide culturally appropriate services.

<sup>51</sup> Recommendations were unnumbered in the Report.

2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

5. Community mediation programs such as the one operated by the Hollow Water Resource Group be expanded to Aboriginal communities throughout the province. Such programs must be designed and operated by Aboriginal people.
6. The federal and provincial governments provide resources to Aboriginal child and family service agencies for the purpose of developing policies, standards, protocols and procedures in various areas, but particularly for the purpose of developing computer systems that will permit them to communicate quickly and effectively with other agencies, to track cases and to share information.
7. Police forces adopt a community policing approach, particularly in Aboriginal communities.
8. Police forces immediately institute employment equity programs to achieve Aboriginal representation equivalent to the Aboriginal proportion of the Manitoba population
9. Cross-cultural education components of all police training courses be reviewed and strengthened, and this process actively involve members of the Aboriginal community, resource persons and recognized experts.
10. All police officers be rotated through cross-cultural education programs, and periodic refresher programs be provided as part of the regular professional development programs of all police departments.
11. Any police recruits displaying racist attitudes be screened out of training, and police officers who display such conduct after joining the force be required to take further training or, if necessary, be formally disciplined or dismissed.
12. All statements taken by police officers be either audio- or video-recorded.
13. As soon as possible, Aboriginal police forces take over from the RCMP the responsibility for providing all police services in Aboriginal communities.
14. The RCMP support the establishment of Aboriginal police forces and develop a policy of cooperation with such forces.
15. While they continue to police Aboriginal communities, the RCMP and all other Manitoba police forces develop and make public an integrated strategy to strengthen their capacity to provide culturally appropriate policing services, and the strategy include the development of a process of regular communication with Aboriginal organizations and communities, and the annual publication of reports which indicate progress in meeting the goals of the strategy.
16. The Dakota Ojibway Tribal Council Police Force be provided with sufficient resources so that it can increase staff training and development in modern police methods, and gradually assume full responsibility for all law enforcement duties within its geographic jurisdiction.
17. Aboriginal communities be encouraged to form regional police forces and regional police commissions following the model of the Dakota Ojibway Tribal Council Police Force. These should be established under Aboriginal control and management.
18. Metis and non-status communities consider the development of a regional police force, with a police commission.
19. New targets be set by the RCMP to bring appropriate numbers of Aboriginal men and women into the force as full officers more quickly than is currently contemplated.
20. The RCMP employ Aboriginal police and civilian staff in their detachments in proportion to at least the Aboriginal population of the province and preferably in proportion to the Aboriginal population being served.

2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

21. The Winnipeg Police Department prepare and table with the city council and the Minister of Justice, no later than December 31, 1991, an employment equity plan which has clear targets, target dates and remedies should targets not be achieved.
22. The City of Winnipeg Police Department set an initial target of 133 Aboriginal police officers. The first step in reaching that goal should be to designate the next recruiting class as entirely Aboriginal. Thereafter, 50% of each recruit class be dedicated to Aboriginal recruits until the target has been met.
23. The Winnipeg Police Department be required to report publicly the progress of its employment equity program to the Minister of Justice.
24. A portion of the funding provided by the Province to the City of Winnipeg for police salaries be conditional on the Winnipeg Police Department's using that funding only for the hiring of Aboriginal police officers.
25. The assignment of Aboriginal police officers not be restricted to the core area or other Aboriginal areas of the city of Winnipeg
26. The Winnipeg Police Department no longer rely on the grade 12 educational criterion for police recruitment and develop approaches which more appropriately test recruits' ability to perform the functions required of police officers.
27. The City of Brandon Police Department prepare and table with Brandon City Council and the Minister of Justice an employment equity plan no later than December 31, 1991, which will increase the numbers of Aboriginal people on the City of Brandon Police Department to a level equal to their proportion of the Manitoba population. The plan should include target dates by which to achieve that proportion and remedies should those targets not be met.
28. The Brandon Police Department set an initial target of nine Aboriginal police officers and that the City of Brandon Police Department dedicate that number of positions for Aboriginal recruits in its next recruit class.
29. Both the City of Winnipeg Police Department and the City of Brandon Police Department consider hiring Aboriginal police officers who already have policing experience with an Aboriginal force or with the RCMP.
30. Aboriginal people be represented among the civilian members of both the City of Winnipeg Police Department and the City of Brandon Police Department in the same proportion as their presence in the province's population.
31. The City of Brandon Police Department, in cooperation with the Brandon Friendship Centre, develop a program to reach out to and inform Aboriginal people living in Brandon about policing issues.
32. The Provincial Police Act make explicit provision for the recognition of any police commission or committee which is established to provide police services in any municipality, unorganized territory, or Aboriginal community in Manitoba.
33. The Manitoba Police Commission prepare and enforce a wide range of regulations covering recruitment, training, equipment, procedures, supervision of, and support for, police forces in Manitoba.
34. The Provincial Police Act be amended to provide for the establishment of a provincial Aboriginal Police Commission with authority to prepare and enforce a wide range of regulations covering recruitment, training, equipment, procedures, supervision of, and support for, Aboriginal police forces in Manitoba.

2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

35. Final decisions concerning the size, composition and manner of appointment to the Aboriginal Police Commission be made by Aboriginal people.
36. The Provincial Police Act be amended to provide for the appointment of an Aboriginal Police Commissioner, to serve the Aboriginal Police Commission, with any such person being selected by Aboriginal organizations responsible for Aboriginal police forces.
37. Agreements be developed between the provincial Aboriginal Police Commission, local police commissions, the RCMP and the provincial Justice department for Aboriginal police forces to provide full police services to Aboriginal communities, with a firm timetable for achieving this goal, including training, equipping and supporting the local forces with appropriate back-up services as required.
38. The Minister of Justice establish a plan of action to deal with any incident where possible criminal acts are alleged against the police, or where a person dies or suffers serious injury in an incident involving a police officer. This plan of action include either the creation of a standing special investigations unit, or a plan to quickly assemble a special investigations team for a particular incident, able to take control of the investigation immediately following report of the incident. The unit or team should not include officers from the police department under investigation. The plan should include independent counsel to give advice concerning the laying of criminal charges. This counsel should not be a Crown attorney. The unit or team should report directly to the Minister of Justice.
39. The police forces in the province be required to provide all available assistance and cooperation to the special investigations team.
40. The Law Enforcement Review Board be reconstituted and the Law Enforcement Review Act be amended to approximate the Ontario model.
41. The board appoint independent counsel to have conduct of each case and be responsible for presenting the evidence.
42. Where the complaint is from an Aboriginal person, one member of a panel be Aboriginal.
43. The test to be applied by the board be proof by clear and convincing evidence, rather than beyond a reasonable doubt.
44. If the board decides that the complaint is proven, it have full power to impose whatever penalties it deems appropriate.
45. In addition to what is now in the Law Enforcement Review Agency reports, the agency report annually on the nature of complaints, how many were found to have merit, how many were dismissed and the type of penalty applied.
46. Police officers, including the officer against whom the complaint is made, be compellable witnesses.
47. Aboriginal justice systems establish and maintain an agency to receive, investigate and resolve complaints against Aboriginal police officers similar to what we recommend for provincial police forces.
48. Complaints against the RCMP in Manitoba, when acting as a provincial police force, be investigated and heard by the Law Enforcement Review Board.
49. An Aboriginal Justice Commission of Manitoba be established by legislation and by appropriate processes of the Aboriginal people of Manitoba, with a board of directors made up of equal numbers of Aboriginal and government representatives, and an independent chairperson. The commission should be provided with all necessary staff and resources.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

50. The position of Aboriginal Justice Commissioner be established as the chief executive officer of the Aboriginal Justice Commission. The commissioner's tasks will include monitoring and assisting government implementation of the recommendations of this Inquiry.
51. Governments consult with Aboriginal groups to design and implement a data collection system that will provide detailed information to compare the impact on, and treatment of, Aboriginal and non-Aboriginal persons by the justice system, to evaluate the success of programs dealing with Aboriginal offenders and to provide information to help identify needed reforms.
52. As a matter of urgent importance, governments and Aboriginal people, with the assistance of the Aboriginal Justice Commission, negotiate an acceptable process to provide ongoing funding for Aboriginal governments to undertake the initiatives we suggest, in a manner consistent with:
  - a. The need of Aboriginal people for an ongoing, consistent revenue base.
  - b. The right of Aboriginal people, as original owners of the land, to a fair share of revenue resources from both levels of government.
  - c. The greater access to the revenue-generating powers and sources available to federal and provincial governments.

---

### 2.2.2. Rebuilding the Trust: Federal Task Force on Governance and Cultural Change in the RCMP (2007)<sup>52</sup>

The Task Force on Governance and Cultural Change in the RCMP was created by a federal Order in Council in 2007 and was led by David Brown, QC. It was prompted by an investigation into issues related to RCMP pension and insurance plans, which raised issues with the governance and culture of the RCMP. The Report also noted the public scrutiny of the RCMP following the September 2006 release of Justice O'Connor's report on the Maher Arar matter (summarized below in section 3.4.), the Air India Inquiry then underway,<sup>53</sup> and the October 2007 death of Robert Dziekanski after he was tasered by RCMP officers.<sup>54</sup> The Task Force completed its review in five months, consulting with thousands of RCMP members and employees across the country, as well as with federal departments and agencies engaged with the RCMP, federal and provincial Solicitors General and Attorneys General, and members of the public.

The Task Force concluded that "there is a need to radically overhaul the way the RCMP is governed" and to improve the accountability to the public, elected leaders and RCMP members and employees.<sup>55</sup> The Task Force members noted that given the complexity of the RCMP, it would not be unreasonable to conclude that breaking it up would solve some or all of the issues confronting it. However, they determined that this decision would require a much broader public

<sup>55</sup> "Rebuilding the Trust," p. vii.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

policy debate, beyond the mandate of the Task Force, and suggested that their recommendations should allow for the proper governance of the RCMP instead.<sup>56</sup>

The Task Force was not able to identify any police agency that provided the same range of services provided by the RCMP.<sup>57</sup> They consulted with experts on best practices in Canada and internationally and published a number of research papers provided by some of those experts.

The Task Force made the following findings:

1. The RCMP's organizational framework does not allow it to properly discharge its responsibilities. Its approach to governance is a "confusing mixture of traditional and modern ideas, philosophies, practices and programs,"<sup>58</sup> and reform will require a radical overhaul of its governance structure.
2. Responsibility for staffing the RCMP is split between the RCMP and Treasury Board, and the Treasury Board decides through its funding approvals how many members and employees and senior management positions are available, as well as the pay for each. The RCMP is also subject to human resource policies designed for the public service. The RCMP is unable to respond in a timely manner to staffing problems in regions or on specific projects. It has also failed to properly approach the aspects of human resource management it does control.
3. The funding mechanisms for the RCMP have become intolerably complex and restrictive, preventing the RCMP from properly allocating resources on a timely basis.
4. The RCMP's management structure is "a product of the military-bureaucratic policing model."<sup>59</sup> The resulting rank-based authority, with formalized, insular, and bureaucratic management by command and control, prevent the Force from delivering on its mandate. Collaborative decision-making and challenging of decisions are discouraged. "[W]e heard more than once that the culture is one of fear and intimidation and that some who are in a position of command use their authority to intimidate others." Those in charge at detachments and other units do not have authority to make operational decisions and must seek authority up the chain of command, seriously compromising their ability to police effectively.<sup>60</sup>
5. Discipline and grievance matters do not go to an independent, binding adjudicator, and there is little accountability for delays in the grievance process. The RCMP External Review Committee (ERC) makes recommendations to the RCMP Commissioner on certain types of grievances and appeals of formal disciplinary actions. Those recommendations are not binding on the Commissioner.
6. The process for investigating public complaints is not independent, easily accessible, transparent, or timely. The RCMP Public Complaints Commission (CPC), created in 1986, also makes nonbinding recommendations to the Commissioner. There is no mechanism for analyzing complaints and grievances to identify and respond to widespread problems.

<sup>57</sup> "Rebuilding the Trust," p. x.

<sup>58</sup> "Rebuilding the Trust," p. 1.

<sup>59</sup> "Rebuilding the Trust," p. 5.

<sup>60</sup> "Rebuilding the Trust," p. 41.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

7. The common bond between police officers created by their work in a dangerous occupation, their dependence on each other, and their contact with often violent law breakers, creates a “culture of policing.” That culture can contribute to effective and responsible policing. However, it can also lead officers to react negatively to complaints about their conduct. Although internal police investigations are usually done professionally, full civilian oversight is necessary to ensure public confidence in investigations of police conduct.<sup>61</sup> “In order for citizens to have confidence in their police, they must have confidence in those who ensure accountability of police to the public.”<sup>62</sup>
8. The RCMP operating model is not sustainable. It is increasingly unable to satisfy the expanding demands for policing services, putting untenable pressure on RCMP members. The issues at the RCMP must be addressed by a management team; that management team must be properly in control of the agenda of the RCMP. The RCMP “must learn to stand tall in its interaction with its stakeholders. It must take pride in its accomplishments and humbly accept its shortcomings. It must accept accountability.”<sup>63</sup>
9. The RCMP never operates at full capacity. At every detachment the Task Force visited, there were unacceptable vacancy rates, often 25–30%. When a new position is created, it typically takes two years for it to be filled due to the recruitment and training process. The policing contracts do not permit the RCMP to replace members who are absent due to leave, secondment, or suspension. Remote and isolated posts are in particular danger of being seriously understaffed. Frontline officers are burdened by administrative obligations due to the increasing complexity and formalization of investigations. New data collection systems require time consuming data entry. This can deter officers from pursuing an investigation at the end of a shift. Fatigue and burnout can also impair judgment, which can expose members to danger. “The culture must not reward—even implicitly—work habits that do not promote good mental and physical health.”<sup>64</sup> Members are also underpaid for overtime.
10. RCMP members believe that managers do not abide by the Force’s values of honesty, integrity, compassion, respect, accountability, and professionalism.<sup>65</sup> The discipline process for members is overly legalistic and adversarial. Performance evaluations were not routinely performed and were not used to plan training or make promotion decisions.
11. There is insufficient funding for management training or research and development on police methods.<sup>66</sup>
12. There are systemic weaknesses in communications, both to the public and from management to members, including slowness, lack of transparency, and inaccurate information. A complete review of the RCMP public affairs and communication function is necessary. “A crisis management process should also be developed with a view to improving the timeliness and quality of information to senior management for decision-making and quick and accurate responses to the media and Canadians.”<sup>67</sup>

---

<sup>61</sup> “Rebuilding the Trust,” p. 13.

<sup>62</sup> “Rebuilding the Trust,” p. 14.

<sup>63</sup> “Rebuilding the Trust,” p. 23.

<sup>64</sup> “Rebuilding the Trust,” p. 27.

<sup>65</sup> “Rebuilding the Trust,” p. 29.

<sup>66</sup> “Rebuilding the Trust,” p. 37.

<sup>67</sup> “Rebuilding the Trust,” p. 40.

2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

13. There is too much central control over contract policing, in contrast to the local authority of their counterparts in Ontario, Quebec, and local forces such as the Halifax police.<sup>68</sup> Local commanders need to have more operational authority, particularly around resource deployment. Given the importance of local relationships between ministers/mayors and local Commanders, provincial and local authorities should have more involvement in the establishment of policing objectives in jurisdictions where the RCMP provides contract policing services.
14. There is inadequate planning and local resourcing for the implementation of policies established by RCMP Headquarters. The divisions, districts, and detachments should be permitted to interpret and apply Headquarters' policies appropriately for the local conditions, with periodic reviews to ensure consistency.

**Recommendations Relevant to the Mandate of the Mass Casualty Commission**

1. (Recommendation 4) The organizational needs of the RCMP must be assessed against its current and future commitments. The RCMP must have the financial resources to satisfy all of its current contract and federal policing responsibilities and the ability to commit resources to satisfy those responsibilities within a reasonable planning horizon.
2. (Recommendation 14) Senior management of the RCMP must ensure that ethics principles underpin all management and administrative functions and are an integral part of all policing activities.
3. (Recommendation 15) The methodology applied to ethics training provided to recruits at the Depot should be extended throughout the organization and should be continually reinforced and refreshed.
4. (Recommendation 31) The RCMP needs to demonstrate greater openness and willingness to accept lateral entry into the Force in order to provide needed specialized skill sets and experience. In the longer term, the Task Force believes that the RCMP should also make a post-secondary degree a condition for all new recruits.
5. (Recommendation 32) The RCMP must recommit to education and training that will equip its officers for senior responsibilities. Leadership training should be a continuum throughout the member's career. The RCMP should identify deserving members with potential for further education and support them in seeking post-secondary education.
6. (Recommendation 33) The RCMP must rebuild its research capability in order to provide members of the Force with an opportunity to explore developments in law enforcement outside of the RCMP and stay abreast of modern policing methods.
7. (Recommendation 39) The RCMP should review and further develop its public affairs function, implementing a public affairs plan that contains a comprehensive internal and external communications strategy that keeps stakeholders appropriately informed. It should also include a crisis management strategy that will permit quick and accurate responses to the media and Canadians.
8. (Recommendation 40) The Force should ensure that, throughout the chain of command, internal communication is a fundamental responsibility for every person in a leadership position.

---

<sup>68</sup> "Rebuilding the Trust," p. 42.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

9. (Recommendation 41) The RCMP should examine and review its approval authorities to ensure that those closest to operational police activity have the requisite authority to make decisions in a timely manner.
10. (Recommendation 42) Headquarters should give greater weight to the views and priorities of contracting authorities and should involve them in a more meaningful way in decisions that have an impact on their jurisdictions.
11. (Recommendation 47) The government should immediately appoint the Implementation Council having the composition, mandate and other attributes set out in Chapter 5.
12. (Recommendation 48) The RCMP should form an internal change management team comprised of members and employees to be engaged full time in planning, coordinating and implementing the changes recommended in this Report. Although leadership will necessarily be provided by senior management, continuous engagement of members and employees at all levels will be essential.

---

### 2.2.3. Kingsclear Public Interest Investigation Report (Commission for Public Complaints Against the RCMP, 2007)<sup>69</sup>

The New Brunswick Training School in Kingsclear, New Brunswick, was established in 1962 as a custodial facility for youth in conflict with the law. It also served as a temporary residence for children in need of protection who were awaiting foster placement. The school was within the RCMP's area of responsibility for criminal investigations. The school closed in 1998 following the conviction of a former staff member of sexual offences against school residents. In 2004, the Commission for Public Complaints Against the RCMP (CPC), the predecessor organization to the Civilian Complaints and Review Commission, received complaints from seven former residents about the RCMP's investigation of sexual and physical assaults, and commenced this investigation.

In October 1985, a staff member, David Forbes, reported to the Fredericton Police that three Training School residents alleged that a staff member, Karl Toft, had perpetrated sexual assault. Mr. Toft was transferred to another institution, and the RCMP was not notified. In 1998, Mr. Forbes told an acquaintance who worked for the government that he had reported a guard at the school for sexually assaulting residents, and nothing had happened. As the CPC noted, this disclosure "was the first in a series of events that launched one of the lengthiest criminal investigations in the legal history of New Brunswick," exposing "a sordid and tragic series of events and crimes" that affected numerous people and spanned almost 40 years.<sup>70</sup> In 1990, the Attorney General of the province directed the RCMP to investigate these allegations. None of the three boys who were believed to have been victims were willing to testify. The RCMP and Crown agreed that without their testimony, a conviction was unlikely. No charges were laid.

Over the following two years, the RCMP and Fredericton police forces conducted parallel investigations into Mr. Toft. Mr. Toft was charged with a total of 37 offences. He pled guilty to these charges in October 1992. Later that year, the RCMP created a special unit to locate other victims and suspects. In 1993, the RCMP recommended 32 more charges against Mr. Toft,

<sup>70</sup> "Kingsclear Investigation Report," p. 25.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

relating to 26 victims. The Crown eventually decided it would not be in the public interest to proceed with those charges.

In 1992, the RCMP began investigating rumours about a New Brunswick RCMP officer, Staff Sergeant McCann, who was stationed two hours from Kingsclear. Sgt. McCann admitted that he knew Mr. Toft but denied any wrongdoing. The lead investigator decided that the rumours about Staff Sgt. McCann's conduct were based on assumptions about his access to potential victims. "[I]n order to protect Mr. McCann", he placed the file in a sealed envelope that could only be accessed by senior RCMP staff. Staff Sgt. McCann's name was also blacked out of all statements. The lead investigator later learned that Staff Sgt. McCann had taken a particular witness out on passes several times. The witness said Staff Sgt. McCann exposed himself to him but did not want to get involved. This witness' mother later told the investigator that Staff Sgt. McCann had sexually assaulted the boy. The lead investigator subsequently completed a report indicating that no reasonable and probable grounds existed to lay any criminal charges against Staff Sgt. McCann. Staff Sgt. McCann retired from the RCMP in April 1993.

In 1998, two former residents alleged abuse by Staff Sgt. McCann. RCMP investigators told them that the offences were minor or summary conviction offences, for which the limitation period had passed, so nothing could be done. The investigation was reopened again in 2000. Seven former school residents disclosed sexual assault by Staff Sgt. McCann; four of these had earlier denied being abused. In 2002, the RCMP investigators provided the Crown with detailed briefs on each of these allegations. They also arrested and interrogated Staff Sgt. McCann, who made no incriminating statements. The Crown recommended that no charges be laid, since an acquittal would be more likely than a conviction. This assessment was based on concerns about the victims' credibility, including criminal records and substance use, lack of corroboration, issues with memory, and inconsistencies and contradictions in their statements. No charges were laid. That concluded the investigation.

The CPC did not substantiate the suggestions that the RCMP tried to cover up the allegations against Staff Sgt. McCann or any of the staff at the New Brunswick Training School or that senior RCMP officials had interfered with the investigation. The CPC found that the perception of members of the public had been influenced by rumours and by their lack of information about the steps the RCMP had taken during the investigation. For example, the RCMP was sufficiently committed to the investigation of Mr. Toft in 1993 that it was prepared to hire its own prosecutor had the Crown refused to go forward. (Charges were laid, but the Attorney General stayed those charges a week later.) The public was also not aware that the Crown in New Brunswick screens potential charges before they are laid and would not recommend laying a criminal charge unless convinced that a conviction is more likely than an acquittal. (In other jurisdictions, police do not typically consult with the Crown before laying charges, and the Crown's standard for assessing charges is "reasonable prospect of conviction" rather than "more likely to convict than acquit.") The RCMP investigation was also hampered by the reluctance of the victims to come forward, the time that had passed since the events, and difficulty obtaining school records.

However, the CPC found that there were inadequacies in the investigations into abuse at the school, which could have contributed to the public perception of a cover-up. These inadequacies included:

- A lack of due diligence by senior officers in "J" Division, given the sensitive nature and large scope of the investigation. It was known almost from the beginning that the investigation was sensitive, high-profile, and had the potential to develop into a large-scale investigation, yet few dedicated resources were allocated to it. It should have involved

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

greater scrutiny by management, and senior officers should have provided more direction and resources. With some exceptions, senior officers became involved only once there was media attention, when complainants communicated directly with them, or when government officials enquired about the progress of the investigation. In the early years, senior officers also did not appear to know about the investigation into Staff Sgt. McCann. As a result, no internal investigation into whether his conduct breached the RCMP code of conduct was ever opened.

- Inadequate resources, an issue that was raised by members from all levels. In the early years, only one investigator was typically assigned, rather than a pair or team, which led to delays while these officers investigated other files, and gaps and inconsistent investigative work as officers were transferred in and out of the detachment. Had the investigation been properly resourced, it would have progressed more quickly and with more professionalism.

The CPC also raised issues with the RCMP Commissioner's response to its interim report, noting that the RCMP Commissioner stated that resources are finite, referring to vacancy rates, staff turnover, and other factors. The CPC Commissioner noted that some of these difficulties related to the RCMP's role in contract policing and to their approach to staff mobility. He expressed concern that the RCMP Commissioner referred to these resourcing issues without making any commitment to try to change them. He urged the RCMP Commissioner to raise the resource issues directly with the provinces, territories, and municipalities who pay for RCMP contract services.

- Inappropriate deference to the opinion of the Crown when deciding whether to lay charges. Although New Brunswick police were required to consult with the Crown before laying a charge, the responsibility for laying charges ultimately lay with the police. Most of the RCMP officers interviewed by the CPC wrongly believed that they were required to accept the Crown's recommendation as to whether to lay a charge.
- Inadequate note-taking, report-writing, and documentation by some RCMP members. There were significant variations in the style and comprehensiveness of the officers' notes. Two interviews with Sgt. McCann in 1992 and 1998, for example, were very poorly documented, as were several conversations with Crown counsel. Poor note-taking may have affected the course of the investigation, for example when information about sources was inaccurate or illegible, and they could not later be located. RCMP note-taking policies were vague and largely unenforced. The CPC stressed the significance of these problems:

The impact of incomplete and deficient reports or notebooks is so great that the administration of justice may be affected as a result. With so many examples of inadequate reports or notes throughout the investigations, this is an issue that cannot be ignored.<sup>71</sup>

The CPC noted that RCMP policies governing notebook retention had changed markedly over the years, but members continued to be responsible for their storage. There was no policy regarding notebooks of members who retired, transferred, or resigned. Most other police departments had more stringent policies regarding notebooks. The RCMP practice of allowing its members to retain their personal notebooks caused difficulties for the CPC investigation. However, the vast majority of RCMP members were willing to cooperate with the investigation, and senior management intervened so as to enable the CPC to

---

<sup>71</sup> "Kingsclear Investigation Report," pp. 269–70.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

complete its investigation. (The report does not include details of these difficulties and interventions.)

In response to the CPC interim report, which detailed its findings on the note-taking deficiencies, the RCMP Commissioner promised to redraft its policy on note-taking and noted two new training initiatives focused on note-taking and report writing. The CPC said in response,

Neither previous policies dealing with note-taking, report-writing, and documenting nor the focused cadet training mentioned in the Commissioner's Notice have been successful in eliminating chronic problems in this area. The key element of any effective strategy to ameliorate compliance with note-taking, report-writing, and documenting policies should include an accountability mechanism whereby the RCMP identifies non-compliance and then provides directed remedial measures to the member. The RCMP might consider the practices of other police agencies which regularly assess adherence to their performance standards.<sup>72</sup>

- Staff Sgt. McCann received different treatment during two interviews than a civilian suspect would have, and those interviews were inadequate. The first interview, in 1992, was premature, as it took place before all potential victims had been interviewed. That gave Staff Sgt. McCann the opportunity to destroy evidence or contact potential witnesses. The interview was conducted by a single officer, who was of lower rank than Staff Sgt. McCann; it was not recorded; the officer did not take detailed notes and did not prepare a detailed report; the interview was held in Sgt. McCann's office; and the officer did not brief squad members or senior officers, either before or after the interview. The officer stated that he did not have any evidence at the time that would substantiate the rumours about Sgt. McCann, but he wanted him to be aware that the RCMP was investigating those rumours. However, given that he and the other officers continued the investigation after the interview and took significant steps to try to encourage victims to come forward, the CPC concluded that the officer was not attempting to give Sgt. McCann an advantage by holding this meeting.
- After the investigation into Sgt. McCann was renewed in 1998, the lead investigator and the officer in charge of the Major Crime Unit interviewed Staff Sgt. McCann in his home. The officers considered Staff Sgt. McCann a suspect but did not record the interview, take detailed notes, or write a report about the discussion. By interviewing him in his home, without taking a formal statement, the officers "gave the former RCMP member a consideration not generally accorded to suspects."<sup>73</sup> It also gave the impression that the officers were not taking the investigation seriously and contributed to public concern about the police investigating themselves.
- The Staff Sergeant leading the investigators refused suggestions from his team members to interview key witnesses. He also disregarded a behavioural profiler's suggestion that the second interview be conducted by a member of the same or higher rank as Staff Sgt. McCann. Some of his team members said he was keen to investigate, while others said he backed off of taking difficult steps. Had he taken those steps, the outcome may not have been different, but there would be less cause for concern about a cover-up.

The CPC report also commented on the RCMP's approach to communicating with the public. The RCMP did not develop any public relations strategy relating to the New Brunswick Training School

<sup>72</sup> "Kingsclear Investigation Report," p. 2.

<sup>73</sup> "Kingsclear Investigation Report," p. 259.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

investigations. It sent out a few press releases in response to stories in the media but did not regularly communicate with the public about the investigations. The CPC noted that the RCMP policy on communications and its guide for media spokespeople did not set out the lead roles and responsibilities in high-profile investigations or provide guidance on managing the public's expectations.

The CPC also noted difficulties relating to the decision to have the RCMP investigate one of its own members. The public's mistrust was inevitable in that context. Furthermore, despite the lack of evidence of a cover-up, it was the case that Staff Sgt. McCann had received preferential treatment during the two interviews in 1992 and 1998. The CPC said this about the impact of the RCMP having its own members conduct the investigation on its relationship with the media and the community:

A criminal investigation into allegations against a member of the RCMP is sensitive and high profile and should be afforded the highest priority. Like any police force, the RCMP is restricted in the amount of information it can divulge; however, this only adds to speculation that the matter is not being addressed as aggressively as it should.

In addition to being able to manage the investigations fairly, impartially, thoroughly and in a timely manner, the investigative team must also manage its relation with the media and, most importantly, with the affected community. As is evident from the various RCMP investigations into the NBTS and Staff Sergeant McCann, this is not easy. Although the public may not be aware of the inner workings of police investigations, it is the duty of the police to ensure that the public can understand the RCMP's actions. This can be achieved by assigning the investigation to an outside police agency or, at the very least, to an RCMP team from a different jurisdiction.<sup>74</sup>

The CPC Commissioner also expressed concern about the RCMP Commissioner's response to its findings on this issue. The RCMP Commissioner stated that policy development was underway to address concerns regarding member investigations of other members but provided no specifics.

### **Recommendations Relevant to the Mandate of the Mass Casualty Commission**

1. The CPC recommends that the Commissioner of the RCMP and RCMP commanding officers ensure that a mechanism is in place to identify investigations that may become sensitive or of a large scale or both.
2. The CPC recommends that appropriate response and accountability mechanisms be put in place at the senior officer level to enable senior officers to monitor continuously the progress of any sensitive or large-scale investigation and assure the public of transparency, effectiveness and impartiality.
3. The CPC recommends that an assessment and follow-up be conducted to determine the actual resource needs of the RCMP "J" Division to ensure that any sensitive and large-scale investigation is conducted without interruption and in a timely and professional manner.
4. The CPC recommends that the CO and senior members of the RCMP in a pre-charge screening province ensure that members clearly understand their role in the administration of justice vis-à-vis the Crown to preserve their independence.

---

<sup>74</sup> "Kingsclear Investigation Report," pp. 270–71.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

5. The CPC recommends that the RCMP examine, amend, and enforce the “Investigator’s Notebook” policy and all policies related to note-taking, report-writing, and documenting to ensure that the policies are operationally effective and that officers adhere to and are continuously trained according to the guidelines.
6. The CPC recommends that the RCMP examine the policy on notebook retention used by other police agencies to glean best practices applied across the country, especially for officers who are retired, transferred or who voluntarily resign.
7. The CPC recommends that the various issues associated with note-taking, report-writing, and documenting be addressed through various approaches, including training, policy revisions, internal oversight, and monitoring.
8. The CPC recommends that any sensitive or large-scale investigation into allegations which impact on the community’s trust in the RCMP should be tasked to another police service or, at the very least, to a team of RCMP officers from another region or province who would have the appropriate experience and who would be unfamiliar with the member under investigation. This would assist in limiting the perception of bias and ensure that public trust in the RCMP is maintained.
9. The CPC recommends that the RCMP improve its internal and external communication strategies for any sensitive or large investigation, adopting a proactive communications approach using modern technologies to clearly demonstrate transparency and the RCMP’s accountability to the public.

---

#### **2.2.4. Police Investigating Police (Commission for Public Complaints Against the RCMP, 2009)<sup>75</sup>**

The Chair of the Commission for Public Complaints against the RCMP (CPC), the predecessor organization to the Civilian Review and Complaints Commission, conducted an investigation into criminal investigations of RCMP members involving serious injuries or death by other RCMP members between 2002 and 2007. This was prompted by public concern regarding two shooting deaths by RCMP members in British Columbia, the death of Robert Dziekanski, and the RCMP’s handling of investigations of alleged sexual abuse at the Kingsclear Youth Training Centre in New Brunswick. (The CPC had no role in conducting criminal investigations of RCMP members.) The CPC reviewed 28 RCMP investigations of members who were alleged to have caused serious injury, death, or sexual assault during the five-year timespan of the review. It also received public submissions, reviewed media, political, and academic debate on the issue of police investigation of police conduct, assessed the current RCMP policy on investigations of members, and researched alternative models. It also reviewed past inquiries into RCMP-involved deaths of civilians and related issues.

The literature review led the CPC to conclude that traditional models of police investigating police, with no civilian oversight, were no longer defensible. These models did not satisfy the public’s expectations for accountability and were not effective. Given the nature of criminal investigations, however, the CPC concluded that there must be some role for police. The CPC found that although there was little research on the subject of investigations of potential criminal conduct by police, particularly with respect to alternative models of investigation, the research that did exist

<sup>75</sup> “Police Investigating Police: Final Public Report.” Commission for Public Complaints Against the RCMP. (August 2009), <https://www.crcc-ccetp.qc.ca/en/police-investigating-police-final-public-report>.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

frequently recommended a model that includes police in the process of investigation, combined with vigorous civilian oversight.

Public submissions focused on the unacceptable delays in the conduct of RCMP investigations of its members, suggesting that delays are conscious tactics to prevent proper investigations and have a significant emotional toll on the subject members; the lack of transparency where the RCMP investigates its own members; suspicions of cover-ups and biased investigations; and perceptions of conflicts of interest arising when police forces investigate their own members.

The CPC noted that neither the Criminal Code nor the RCMP Act had any provisions governing criminal investigations of RCMP members. The RCMP Commissioner's Standing Orders required members investigating other members to "take the same action as you would for any other person" and to inform the Criminal Operations Officers (CROPS). Only three provinces (Ontario, Alberta, and Saskatchewan) had legislation addressing the investigation of police.

The CPC reviewed all RCMP policies drafted between 2001 and 2008 relating to police investigations of police. Where the RCMP had geographic jurisdiction, these policies required the appointment of an independent investigator for certain types of incidents, such as deaths in custody. Some of the provincial policies recommended the transfer of the investigation to a different police force entirely, but this transfer was discretionary. There were also very limited situations in which an administrative review was required. For example, where an RCMP Emergency Response Team caused serious injury or death, an incident commander from outside the division was required to conduct an administrative review. The CPC also noted that different jurisdictions defined "serious injury" differently. There were other inconsistencies in both the content and application of policies across divisions. The CPC said,

The sheer volume and variety of RCMP policies with implications for the issue of police investigating police is overwhelmingly large ... This police "overload" poses a great threat to the RCMP's operational effectiveness. The very nature of frontline policing requires that direction be provided in a format that is clear, concise and easy to access.<sup>76</sup>

The CPC made the following findings about the investigations it reviewed:

- 25% of the primary investigators knew the subject member, and 4% were from the same detachment; this was the case in both remote/northern regions and in more centralized divisions.
- More than half of the investigations had only one investigator assigned, which could create the potential for a conflict of interest, and many were of the same or lower rank as the subject member, creating the potential for intimidation.
- Investigations of serious allegations were often handled by members without significant experience, and general investigation service (GIS) members were not given any workload relief for these investigations, suggesting that the allegations were not taken seriously.
- However, all witnesses who were willing to cooperate were interviewed, and experts (such as accident reconstruction personnel) and resources were used appropriately.

---

<sup>76</sup> "Police Investigating Police," p. iv.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

- Most investigations were complete within six months, but 19% took longer than a year to complete, usually due to workload issues.
- Charges were laid in five of the 28 cases, resulting in convictions in two of the cases. The remainder were stayed, withdrawn, or resulted in an acquittal. Only one case went to trial.
- In all 28 of the investigations reviewed by the CPC, the reviewers found that the investigations were conducted professionally, conscientiously, and without bias. (The report noted that in one of these cases, a judge had determined that the subject members had in fact committed police brutality.)

The CPC identified three forms of investigations of police officers: 1) dependent, in which officers from the same detachment or from another detachment or force conduct the investigation without civilian involvement or oversight (the traditional model); 2) the interdependent model, in which either a civilian observer is assigned to the investigation to ensure that the police conduct it appropriately or a civilian body is involved in the investigation either directly or through an oversight mechanism; and 3) the independent model, in which a civilian body conducts the entire investigation with no involvement by police. At the time of the CPC report, there were memoranda of agreement between the RCMP and local police services in Nova Scotia, Newfoundland, and New Brunswick to allow those other forces to investigate RCMP members. However, the report noted that although these agreements can create the perception of independence and fairness, and allows for experienced investigators with appropriate resources to conduct the investigation

...the use of an external police force for member investigations remains highly discretionary and inconsistently applied across RCMP divisions. Having an external police force investigate the RCMP may provide only the appearance—but not the reality—of an independent investigation. Many seriously question the possibility of independence for external police investigations due to occupational and cultural police philosophies which can jeopardize the protection of the individual member thereby undermining the integrity of the investigation (e.g. “blue wall,” “blue curtain” or “code of silence”). There is also little evidence that external police officers do actually obtain higher levels of police cooperation from other police in complaint investigations to justify their involvement, and without public oversight external investigations of this nature often produce similar findings to an internal investigation and result in a low level of substantiated complaints.<sup>77</sup>

With respect to the interdependent model, the CPC described the work of the Independent Observer Program in British Columbia and Yukon, which assessed the impartiality of RCMP investigations of members. Although there were benefits to this model, the observers cannot conduct their own investigations, and because they are civilians, they may be viewed as illegitimate and unqualified by some police officers. The other option for the interdependent model involves the civilian oversight agency directly in investigations. The civilians collaborate with the investigating police force and may manage the investigation or assume control of it. The civilian investigators may include retired or seconded police officers, as well as civilians. This model combines the expertise and powers of police with independent and impartial civilians. It may, however, introduce police culture and values that could affect the development of a civilian culture. Alberta’s Serious Incident Response Team and Saskatchewan’s Public Complaints Commission both operate using this model.

The independent model does not involve police officers in the investigation of their colleagues, and there is no investigative collaboration between officers and the civilian body. An example of

---

<sup>77</sup> “Police Investigating Police,” p. 78.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

this approach was the Special Investigations Unit then in place in Ontario. The independent model creates total independence and accountability and may result in better cooperation from complainants. In some cases, the independence of the model may benefit the police in terms of its public reputation. The CPC concluded that this model is expensive and may be seen as undermining police management authority and responsibility. Police may assume the investigators are unqualified, ignorant of operational realities, and unsympathetic to police, and may resist cooperating with this process. That in turn could lead to failed investigations and a lack of public trust in the process.

The CPC was of the view that police should be involved in the process, but it recognized the need for enhanced civilian involvement in investigations in order to ensure their impartiality and integrity. It therefore recommended the interdependent hybrid model. Under this approach, an RCMP Review Body would be established and would have the authority: to refer the criminal investigation of an RCMP member to another police force or criminal investigative body in Canada; to monitor any criminal investigation of an RCMP member, where it deems it appropriate, which could include embedding an observer where the investigating body gives permission; and to undertake joint investigation with other police investigative bodies (such as provincial agencies mandated to investigate provincial or municipal police members). The referral of the investigation of a member to another force or investigative body would be mandatory in certain cases, depending on the seriousness of the alleged conduct.

Specific recommendations addressed the approach to be taken by RCMP members when investigating their own members, including the rank of the investigating officer, the use of teams, consultation with the Crown, and the use of administrative reviews. The CPC also recommended that policies and training be changed to reflect this approach and recommended the creation of a manual for RCMP investigations of their own members.

The CPC also recommended the establishment of a Registrar to collect data on member investigations and share that data with the CPC; monitor and ensure compliance with policy; manage an RCMP advisory group to advise on responses in sensitive cases; and create and maintain a mobile critical incident team of trained investigators on standby, ready to be deployed where appropriate. The CPC recommended it have a significant role in the new approach to member investigations, including having a CPC civilian observer embedded in the mobile critical incident team, and having the CPC Chair and Registrar jointly determine whether the mobile team should be deployed.

#### **Recommendations Relevant to the Mandate of the Mass Casualty Commission<sup>78</sup>**

1. It is recommended that CPC legislation be modified to create a new RCMP Review Body with the mandate to refer the investigation of an RCMP member to a police force other than the RCMP or to another criminal investigative body in Canada.
2. The new RCMP Review Body should be responsible for determining when the monitoring capacity should be applied. (Discretion would lie with the RCMP Review Body and not with the RCMP, as is currently the case.)

---

<sup>78</sup> This list has been compiled from several different parts of the report "Police Investigating Police," most notably pp. 97–102 and pp. 106–7. The order here is therefore not reflective of the original recommendations, many of which were not numbered.

2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

3. The new RCMP Review Body should be granted the authority to monitor any criminal investigation relating to a member of the RCMP, where it deems it appropriate to do so.
4. The new RCMP Review Body should be granted the authority to undertake joint investigations with like-mandated bodies.
5. We recommend the creation of the position of National RCMP Member Investigation Registrar responsible for providing the CPC Chair with regular monthly reports for all member investigations undertaken for indictable offences, hybrid offences, and summary convictions. The Registrar shall:
  - a. Create an RCMP National Registry for all police investigating police data (especially for serious injury, sexual assault, and death cases) with timely sharing of data with the CPC;
  - b. Create and manage an RCMP Police Investigating Police Advisory Group to help determine actions to be taken in sensitive cases;
  - c. Monitor effective compliance with policy and enforce compliance where necessary (e.g. consultation with Crown re: laying of charges mandatory);
  - d. Create and oversee a specialized unit with expertise on the handling of RCMP historical cases to be consulted or deployed where necessary; and
  - e. Create a mobile critical incident member investigation team (with a CPC civilian observer embedded) that can be deployed where both the RCMP National Registrar and the CPC Chair jointly determined it necessary to do so (a pool of qualified senior investigators placed on standby that can be deployed quickly, e.g., peacekeepers).
6. The RCMP Commissioner should revise the current version of his Standing Orders to:
  - a. Include new Standing Orders to direct handling of member investigations, as per the recommendations in this report;
  - b. Specify that member investigations are not to be handled like any other criminal investigation and must therefore follow strict procedures set out for member investigations; and
  - c. Specifically revise current section 9 (“A member shall not investigate a complaint where that member may be in a conflict of interest situation.”) It is recommended that the term “conflict of interest” be further defined.
7. The CPC recommends that the rank of the primary investigator must be at least one rank higher than that of the subject member.
8. In order to reduce the length of time to conduct statutory investigations against RCMP members, it is recommended that member investigations be assigned to a team of (minimum) two members in a specialized investigative unit.
9. The RCMP should assign competent senior investigators with a proven track record in court who have completed the appropriate courses (e.g., sexual assault, major crime, interviewing and interrogation techniques, and statement analysis) who can effectively interview witnesses with strong analytical skills.
10. Workload of members assigned to member investigations should be reassigned or adjusted to prioritize member investigations accordingly.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

11. Special attention should be paid to enforce the RCMP requirement to consult with the Crown prior to laying any charges against members, given the particular need for independence and impartiality in member investigations. The RCMP should also undertake a review regarding recommendations made to the Crown in cases involving RCMP members.
12. Given the sensitivity and transparency required for member investigations, it is recommended that administrative reviews be undertaken in all cases of serious injury, sexual assault, or death.
13. The RCMP should consider applying the use of the “probe” [a review designed to help determine how to proceed in less serious investigations] to lower-end investigations in all divisions.
14. The RCMP could consider recommending that the Officer in Charge of the Criminal Operations Section be the appropriate recipient of the probe report in order to determine whether or not a lower-end investigation should proceed to a statutory investigation.
15. Historical cases require expertise not typical of most investigators. It is therefore recommended that these types of cases be handled by a specialized unit at the national or regional level.
16. Policy guiding criminal investigations of RCMP members should be standardized nation-wide. This would allow for the statutory investigations into RCMP members to be conducted uniformly across the country.
17. The RCMP should formalize a memorandum of understanding for every division across the country to ensure consistency in the referral of member investigations to an external police service.
18. The RCMP should create an Integrated Manual to specifically address procedures for investigations undertaken by the RCMP into one of its members.

---

### 2.2.5. Braidwood Commission on the Death of Robert Dziekanski (British Columbia, 2010)<sup>79</sup>

Robert Dziekanski, a 40-year-old Polish man, travelled by air from Poland to Vancouver in October of 2007. He was lost in the Vancouver airport for several hours and became agitated. He did not speak English. Four RCMP officers responded to calls about Mr. Dziekanski and used a conducted energy weapon (Taser) on him several times. Mr. Dziekanski died at the scene. The Province of British Columbia appointed Thomas Braidwood, a retired judge of the British Columbia Court of Appeal, to conduct two public inquiries: the first into the use of conducted energy weapons in British Columbia, which was released in July of 2009;<sup>80</sup> and this report, which focused on the actions of the Vancouver airport staff, border security officials, first responders, and the RCMP officers. It was released in May of 2010.

---

<sup>79</sup> “Why? The Robert Dziekanski Tragedy: Braidwood Commission on the Death of Robert Dziekanski,” submitted to the Attorney General of British Columbia (May 2010), <https://www2.gov.bc.ca/assets/gov/law-crime-and-justice/about-bc-justice-system/inquiries/braidwoodphase2report.pdf>.

<sup>80</sup> “Restoring Public Confidence: Restricting the Use of Conducted Energy Weapons in British Columbia.” Report of the Braidwood Commission on Conducted Energy Weapon Use, submitted to the Attorney General of British Columbia (July 2009), <https://www2.gov.bc.ca/assets/gov/law-crime-and-justice/about-bc-justice-system/inquiries/braidwoodphase1report.pdf>.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

Mr. Dziekanski's intention was to permanently move to Kamloops, BC, where his mother lived. He spoke only Polish. He had never flown before and was anxious before the flight. However, his behaviour on both of his flights to Canada was uneventful. After his arrival, he stayed in the airport's customs area for several hours. He may not have understood where to go due to the language barrier. His mother, who had arranged to meet him at the airport, sought assistance from various airport staff to find him over the course of several hours. Eventually, at the suggestion of a Canadian Border Services officer, she returned to Kamloops. Two Border Services staff later came upon Mr. Dziekanski and assisted him through the immigration process. Mr. Dziekanski was approved for immigration to Canada. Mr. Dziekanski was cooperative during this process, although tired and thirsty. He went to the public meeting area of the airport shortly after midnight and appeared in security footage to be looking for someone, presumably his mother. Members of the public and airport workers described him as upset, nervous, angry, distraught, sweating, and talking to himself. At one point, he hit the glass doors in an attempt to get back into the lounge. People tried to speak with him but could not, due to the language barrier. Mr. Dziekanski used his suitcases and a chair to form a barrier, and a bystander's video showed him smashing a small table against a glass wall and throwing a computer on the floor. None of his conduct was directed at other people. People in the public area called 911 and the airport's Operations Centre. The Operations Centre called the RCMP at 1:23 am and reported there was a man, apparently intoxicated, who was throwing suitcases and chairs around.

A few minutes later, four RCMP officers arrived. The officers observed that Mr. Dziekanski was disoriented, agitated, sweating, unkempt, and breathing heavily. He was calm and cooperative with his hands at his side. One of the officers asked for his passport and mimed to explain. A bystander's video showed that Mr. Dziekanski moved slightly toward his luggage, a movement Mr. Braidwood interpreted as an effort to comply with the demand for his travel documents. However, the senior RCMP officer in the group, Cpl. Robinson, sternly and authoritatively said, "No. Stop." Mr. Dziekanski stopped moving and stood with his arms at his side, looking at the officers. Mr. Braidwood again concluded that Mr. Dziekanski was trying to comply and that Cpl. Robinson's direction that he stop was inappropriately aggressive and unnecessary. Mr. Dziekanski threw up his hands, turned away from the officers, and moved toward a nearby counter. Cpl. Robinson moved closer behind him. Mr. Dziekanski said in Polish, "Leave me alone. Leave me alone! Did you become stupid, or have you gone insane? Why?" The officers described his behaviour as defiant and resistant, justifying deployment of an intermediate weapon or device, as did two use-of-force experts who testified at the inquiry. Two other use-of-force experts were of the view that Mr. Dziekanski was acting out of frustration because he was receiving contradictory instructions from the officers. Mr. Braidwood concluded that Mr. Dziekanski was neither resistant nor defiant.

Mr. Dziekanski then turned and faced Cpl. Robinson, stepped backward, and picked up a stapler that was on the counter. Cpl. Robinson pulled out his baton and directed Cst. Millington to deploy the conducted energy weapon. At the same moment, Cst. Millington independently decided to deploy the weapon. Cpl. Robinson and Cst. Millington testified that they deployed the conducted energy weapon because Mr. Dziekanski had assumed a combative stance, was clenching the stapler in his raised fist, and stepped toward the officers, causing them to believe he intended to attack. Mr. Braidwood concluded that Mr. Dziekanski was simply holding the stapler and did not brandish it or move toward any of the officers.

Mr. Braidwood noted the restrictions that prevent public inquiries from making findings of criminal or civil liability. He said:

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

It is not my role as Commissioner to pass judgement on whether or not Cst. Millington was justified under s. 25 of the Criminal Code in deploying the conducted energy weapon in these circumstances. That is a legal determination properly left to the Criminal Justice Branch of the Ministry of Attorney General and to the courts. Indeed, it is not open to a provincial commission of inquiry to make findings of criminal or civil liability, and I have no intention of doing so.

Having said that, I think it is appropriate for a commission of inquiry to go beyond a mere recitation of the facts and to analyze the officers' actions in the context of the factual circumstances they faced, the training they had received, and the RCMP's policies under which they operated. I am authorized to make findings of misconduct if I consider it necessary to do so and to make recommendations on any aspect of my mandate. Analyzing the officers' actions and drawing conclusions from them are prerequisites to these two functions.

In my view, Cst. Millington was not justified in deploying the conducted energy weapon against Mr. Dziekanski, given the totality of the circumstances he was facing at that time. Similarly, Cpl. Robinson was not justified in instructing him to deploy the weapon. Further, I do not believe that either of these officers honestly perceived that Mr. Dziekanski was intending to attack them or the other officers.<sup>81</sup>

Justice Braidwood also commented on the RCMP training and policy on the use of force. He noted that the two use-of-force experts who were of the opinion that the officers' conduct was justified were responsible for training RCMP and other police officers on the use of force. Justice Braidwood commented:

While I consider Cst. Millington's decision to deploy the weapon and Cpl. Robinson's instruction to do so to have been unjustified in the circumstances, with horrendous consequences, I am equally critical of the policy and training paradigm that fosters such poor decision-making. This case cannot be dismissed as two officers having exercised poor judgement through an incomplete risk assessment that discounted Mr. Dziekanski's emotional state. The force-centric analysis they applied to the circumstances they faced appears to me to have been entirely predictable, given the similarly blinkered approach taken by [the use of force experts] Sgt. Fawcett and Cpl. Gillis in their evaluations and analyses.

I interpret the expert testimony of these two senior and experienced officers as reflecting the use-of-force training that occurs within the RCMP at large and in BC's municipal police departments. If that is so, it troubles me greatly. It is without a doubt essential that officers be trained in the use of force because many situations they face will require the use of force to protect the public and themselves and to restore public order. But that is only half the story. Many situations can be and should be resolved without force, and the skills and techniques that facilitate the non-physical resolution of such incidents should be an integral part of not only use-of-force training but also post-incident evaluations and analyses.<sup>82</sup>

Cst. Millington deployed the weapon for six seconds, causing Mr. Dziekanski to scream and fall to the floor. (The officers testified that Mr. Dziekanski did not fall and that the first deployment of the weapon had not worked. Mr. Braidwood rejected that evidence and found that Mr. Dziekanski fell as a result of the first deployment of the conducted energy weapon.) One second later, Cst. Millington deployed the weapon again for five seconds. Mr. Dziekanski was on the floor screaming and thrashing his legs. The officers wrestled with him and handcuffed him. Cst. Millington deployed the weapon a third time during the struggle, again without properly assessing the risk

and without justification. Cpl. Robinson also pressed his leg against Mr. Dziekanski's neck without justification. Cst. Millington deployed the weapon twice more, for a total of 15 seconds, while the officers were trying to handcuff Mr. Dziekanski.

Mr. Dziekanski went unconscious. Cst. Bently requested an ambulance and then upgraded the call to Code 3 when he saw Mr. Dziekanski's face turn blue. When firefighters arrived, none of the RCMP officers were attending to or monitoring Mr. Dziekanski. Cpl. Robinson refused the firefighters' request to remove the handcuffs, saying Mr. Dziekanski had been violent. Mr. Dziekanski was unconscious, did not appear to be breathing, and firefighters could not find a pulse. Paramedics arrived and made repeated requests to have the handcuffs removed before the officers did so. Mr. Braidwood found that Cpl. Robinson's refusal to remove the handcuffs was unjustified. The paramedics were not able to resuscitate Mr. Dziekanski, and after twenty minutes, he was pronounced dead.

The four RCMP officers made their notes, and investigators from the RCMP Integrated Homicide Investigation Team ("IHIT") interviewed them later that morning. They testified that they did not discuss the events before giving those statements. However, Mr. Braidwood found that they did discuss the incident. They may not have colluded to fabricate a story, but "their discussions resulted in them giving surprisingly similar accounts of the incident that tended to misrepresent what had happened and tended to portray Mr. Dziekanski's actions in an unfairly negative light and their own actions in an unfairly positive light."<sup>83</sup> In his report on the use of the conducted energy weapon, Cst. Millington also deliberately misrepresented the actions of Mr. Dziekanski, saying that he swung the stapler wildly at the officers, raised his fist, and after the first Taser, moved toward the officers with his arms raised.

Mr. Braidwood said,

In my 23 years as a criminal defence lawyer and prosecutor and in my 16 years as a trial and appellate judge, I have had professional dealings with hundreds, if not thousands, of RCMP officers. Those dealings reinforced the respect I have had for the Mounties since my childhood. The RCMP is an iconic institution in Canada, and for nearly a century its officers have served their country and its citizens with integrity and bravery, often in harsh and dangerous circumstances.

The unprofessional manner in which Cst. Millington and Cpl. Robinson dealt with Mr. Dziekanski, and all four officers' less than forthright accounting for their conduct, has had repercussions that extend far beyond this one incident and well beyond this province—Mr. Dziekanski's death appears to have galvanized public antipathy for the Force and its members. That is regrettable. As I have said several times in this report and in my earlier one, the most important weapon in the arsenal of the police is public support.

During the past few years, several other high-profile incidents appear to have undermined public confidence in the RCMP. I cannot comment on these other matters, but I can comment about this one tragic case. At its heart, it is the story of shameful conduct by a few officers. It ought not to reflect unfairly on the many thousands of other RCMP officers who have, through years of public service, protected our communities and earned a well-deserved reputation in doing so.<sup>84</sup>

Three weeks after public hearings ended and shortly before oral submissions were due to start, the federal Department of Justice disclosed to the Commission an email between senior RCMP

<sup>83</sup> "Why? The Robert Dziekanski Tragedy," p. 13.

<sup>84</sup> "Why? The Robert Dziekanski Tragedy," p. 269.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

members. This email raised issues about the sequence of events (in particular, whether the officers had made a plan to use the conducted energy weapon on their way to the airport). Mr. Braidwood referred to the delay in disclosing this document as “appalling.”<sup>85</sup> Although Justice Braidwood did not explain the cause of the delay in his report, media reports recount counsel for the Department of Justice stating that the RCMP provided the email to the Department of Justice, but it was inadvertently overlooked.<sup>86</sup>

Mr. Braidwood reviewed the possible triggers of the cardiac arrest that caused Mr. Dziekanski’s death. He dismissed the suggestion that Mr. Dziekanski died from a condition known as “excited delirium” and found instead that although the precise cause of death may never be known, the multiple deployments of the conducted energy weapon and the physical altercation both played a role.

Mr. Braidwood criticized the RCMP’s media approach following the incident.<sup>87</sup> The RCMP’s senior media relations officer for British Columbia made statements to the public that were factually inaccurate, painting Mr. Dziekanski in an unfairly negative light (for example, stating that Mr. Dziekanski was being combative and that “the violence was escalating”). The media statements also asserted that Mr. Dziekanski was tasered twice rather than four times, as was being publicly reported. Responsibility for media relations then moved to the RCMP IHIT branch. When the RCMP became aware that these statements were inaccurate, it did not correct them. Eventually, immediately before the IHIT spokesperson testified at the inquiry, the RCMP made a statement to the media apologizing for how it handled public communications about Mr. Dziekanski’s death. The IHIT officers testified that they did not want to issue any public statements about issues that were pertinent to their investigation until the investigation was complete, which is why the earlier statements by the senior media relations officer were not corrected. However, Mr. Braidwood noted that the IHIT did make a public statement to correct rumours that RCMP members did not provide Mr. Dziekanski with any first aid.

Mr. Braidwood attributed the inaccuracies in the initial statements about the incident to the rush to inform the public about what had happened before ensuring the accuracy of the information. He also concluded that the decision not to correct those inaccuracies amounted to an error in judgment on the part of the IHIT officer responsible and resulted from a conflict of interest caused by the RCMP conducting the criminal investigation of its own members. Mr. Braidwood noted that any inaccuracies in RCMP statements about an incident in which the RCMP was not itself implicated would be accepted by the public as normal in the early stages of an investigation. However, because the police were investigating themselves, the public was understandably skeptical about the RCMP’s explanation for these inaccuracies and its decision not to correct them.

<sup>87</sup> Mr. Braidwood noted that the federal Department of Justice had argued that the terms of reference for the inquiry did not permit him to address this issue. He disagreed, noting that the terms of reference were broad, and he also noted that there was an “intensely negative public reaction to the RCMP’s media response, which in my view had the potential to undermine public confidence in the RCMP. When public confidence in such an important institution (that polices more than half of our province) is brought into question, it is in my view one of the principal functions of a public inquiry to address that issue and report to the government and public on it.” “Why? The Robert Dziekanski Tragedy,” p. 357.

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

Mr. Braidwood noted that the Davies Commission of Inquiry<sup>88</sup> and the Civilian Complaints and Review Commission (see section 2.2.4 above),<sup>89</sup> among others, had called for a civilian body to investigate incidents during which police officers may have broken the law. He said the issue was not whether to move to a civilian system but what form it should take. He recommended it be structured similar to the Special Investigations Unit (SIU) in Ontario (which has since been replaced) and be responsible for investigating all police-related incidents that may involve contraventions of the law or that cause death or serious harm. Unlike the SIU, this body should eventually be staffed entirely by civilians, with no member having served anywhere in Canada as a police officer. He acknowledged that this aspect of his recommendation was controversial, with many in the policing community taking the view that only experienced police officers can conduct this kind of investigation competently. However, the investigators at Ontario's SIU were all former police officers, and a 2008 report by the Ontario Ombudsman found that they were "steeped in police culture."<sup>90</sup> The Alberta body responsible for investigating officer-involved deaths and other possible criminal conduct by police officers was staffed by civilian investigators. Mr. Braidwood concluded that it was possible to have a competent investigative body without hiring any former police officers to staff it. Moreover, doing so was, in his view, essential, given the public's concerns about the integrity of police-led investigations of police. He also recommended that a special prosecutor be appointed to screen charges and prosecute these cases.

Mr. Braidwood made recommendations to ensure that arriving passengers can be effectively tracked through the airport and commended the airport management for changes it had made to its emergency responses. He noted, however, that there was confusion over which body—the Vancouver Airport Authority, the RCMP, local firefighters, or the BC Ambulance Service—was responsible for the various aspects of the response. He suggested that these agencies develop a plan to deal with such incidents in the future.

**Recommendations Relevant to the Mandate of the Mass Casualty Commission:**

1. (Recommendation 6) I recommend that the Vancouver Airport Authority, RCMP, Richmond Fire-Rescue, and BC Ambulance Service:
  - Work together in formulating a plan of action for dealing with police use-of-force incidents at the Vancouver International Airport that evolve into medical emergencies.
  - Train, with regular updates, their personnel on any such plan of action formulated by them, including live training exercises.
2. (Recommendation 7) I recommend that, within two years of this report being made public, the provincial Minister of Public Safety and Solicitor General report publicly and in writing to the Legislative Assembly on the extent to which the federal government and the Vancouver Airport Authority have implemented the recommendations contained in this report, and if one or more recommendations have not been implemented, the reasons why.

<sup>90</sup> "Why? The Robert Dziekanski Tragedy," p. 417.

2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

3. (Recommendation 8) I recommend that:
- a. British Columbia develop a civilian-based criminal investigative body, which I suggest be named the Independent Investigation Office (IIO).
  - b. The IIO be mandated to investigate all police-related incidents occurring throughout the province in which:
    - “police-related incidents” include but are not necessarily limited to incidents:
      - in which a person dies or suffers serious harm:
        - i. while in the custody or care of a municipal police officer or RCMP officer, or
        - ii. the death or serious harm could be seen to be the result of the conduct of any municipal police officer or RCMP officer, or
      - which involve possible contravention, by a municipal police officer or RCMP officer, of:
        - i. any provision of the Criminal Code, or
        - ii. any other federal or provincial statute that, if the incident were investigated by a police officer, might in the minds of reasonable, informed members of the public undermine confidence in the police.
    - “serious harm” means injury that:
      - creates a substantial risk of death,
      - causes serious disfigurement, or
      - causes substantial loss or impairment of mobility of the body as a whole or of the function of any limb or organ.
  - c. The IIO be accountable to the Ministry of Attorney General.
  - d. The IIO be led by a director who is neither a current nor former police officer, appointed by Order-in-Council for a fixed, renewable term of five or six years.
  - e. No member of the IIO shall have served anywhere in Canada as a police officer.
  - f. Notwithstanding para (e), during the first five years of operations, the IIO may include as members former police officers, provided that:
    - they have not served as a police officer in British Columbia within the preceding five years,
    - they take no part in any investigation relating to a law enforcement agency in which they were employed,
    - they constitute no more than a minority of the investigators who are assigned to a particular investigation, and
    - their employment with the IIO expires by the end of the five-year transitional period.
  - g. To ensure the IIO’s unquestioned authority to act, its essential powers be entrenched in legislation, such as:
    - the IIO director and investigators have the status of peace officers,

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

- the chief constable or commanding officer of the RCMP of the jurisdiction in which a police-related death occurs must immediately advise the IIO of the incident,
  - pending arrival of the IIO at the incident scene, the chief constable or commanding officer of the RCMP must ensure that the scene is secured and that officers involved in the incident are segregated from each other,
  - officers involved in the incident must not communicate with each other about the incident, except as authorized by the IIO,
  - the IIO becomes the lead investigative agency, and the home police department or RCMP has no investigative responsibility or authority, except as granted by IIO,
  - a witness officer must promptly make himself or herself available for an interview with the IIO investigator and must promptly deliver to the IIO all notes, reports, and other investigative materials relevant to the incident, and
  - a respondent officer may be—but is not compelled to be—interviewed by the IIO and must in all cases promptly deliver to the IIO all notes, reports, and other investigative materials relevant to the incident.
- h. In every police-related incident assigned to the IIO, a special prosecutor be appointed in accordance with the Crown Counsel Act.
- i. The provincial Ombudsman have jurisdiction over the IIO.

**2.2.6. Sharing Common Ground: Review of Yukon's Police Force (2011)<sup>91</sup>**

Policing services in Yukon are provided by the RCMP "M" Division. Public confidence in the RCMP had been shaken by the tasing death of Robert Dziekanski at the Vancouver airport in October 2007, the acquittal of two RCMP officers in Yukon who had been charged with sexual assault, and the death of an acutely intoxicated man in custody in a Whitehorse detachment in December 2008. In response, the Yukon Minister of Justice established this review of Yukon's police force and appointed as co-chairs the Commanding Officer of "M" Division, the Deputy Minister of Justice, and a representative of the Council of Yukon First Nations. The review had an Advisory Committee made up of representatives of women's organizations, Aboriginal organizations, and other groups. They conducted public meetings across the territory and met with justice workers, social service providers, and RCMP staff, and made a special effort to engage First Nations citizens in the review. Part of the mandate was to "review the services provided by the RCMP to citizens who are in vulnerable positions, including victims of domestic violence and sexual assault, as well as individuals who are arrested and detained in custody."<sup>92</sup>

## 2. POLICE OVERSIGHT, TRAINING, PREPARATION, CULTURE

The Co-Chairs reported the following with respect to the experiences of women with the RCMP:

Women's groups in Yukon are deeply concerned about shortcomings across the criminal justice system, social services and community dynamics that make women fearful of reporting physical or sexualized violence to the police. In many of the situations where police are involved, women are in vulnerable family situations and dealing with child custody, welfare, domestic violence and the dynamics of social isolation in small and remote communities. Some women do not feel safe in reporting their abuse and do not trust that they will be safe after making a disclosure. They worry that they will not be taken seriously, that they will not be heard, that their situation will not improve, or that they will not receive the assistance that they require. Most distressing is that we heard from some women who fear reporting crimes against them to the RCMP.

First Nations women are in a particularly vulnerable position—first, in relation to the gender bias that they frequently face when dealing with the justice system, and second, with respect to racism they often feel as a result of being First Nations. [...] Many First Nations women do not trust the RCMP. The struggles of aboriginal women with the police have been strongly associated with the denial of their rights, destruction of family structures and traditions, poverty, addiction and violence.

In cases of domestic violence, women reported being questioned by police officers as they were being driven to shelters for the choices they had made, for staying in an abusive relationship or for exposing their children to violence. These women feel some investigators do not understand that women may not be able to leave a relationship for many reasons, including economic dependence, fear of family or community reprisals, or the belief that the perpetrator will change and the violence will end.<sup>93</sup>

The Co-chairs found a loss of trust by many citizens in the ability of the RCMP to uphold its core values. Members of First Nations communities reported being ignored, intimidated, treated unfairly, and being subject to what they referred to as “second-class justice.”<sup>94</sup> First Nations citizens did not typically report complaints about this mistreatment.

The Co-Chairs also reported that “M” Division members feel that they are under-resourced and unable to meet the expectations of the communities and are often on call 24 hours a day, as are officers in many smaller southern communities in Canada.

The Co-Chairs concluded that to establish trust in the police in Yukon, there must be a strong focus on building relationships with community members. Citizens need to be more involved in establishing police priorities, goals and objectives, and there should be a local, responsive, and independent police complaint process.

The Government of Yukon reported on the implementation of the “Sharing Common Ground” recommendations in 2014.<sup>95</sup> At that point, the Department of Justice decided to end the project stage of the implementation and to incorporate incomplete recommendations into department workplans.
